SESP 2017 - 30/03/2017

ESA UNCLASSIFIED - For Official Use

European Space Agency

Outline

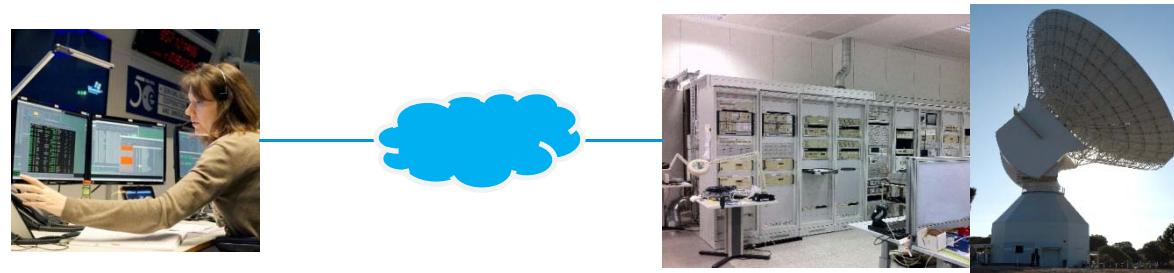

1. Introduction
2. The End-to-End Ground Segment Reference Facility (E2E GSRF)
3. The E2E GSRF Architecture
4. The E2E GSRF Representativeness
5. Test Automation
6. Conclusions

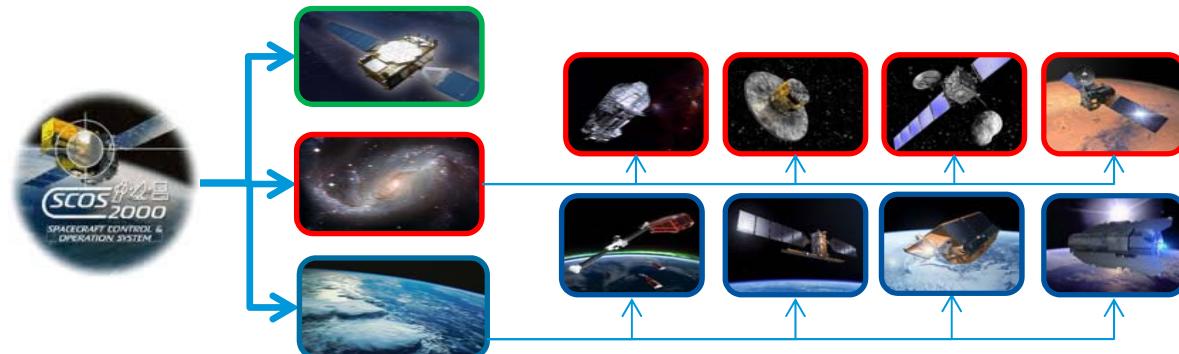

Introduction

- Ground Segment: a **complex Systems of Systems**

- ESOC: from **generic** Infrastructure to mission **specific** tailoring

Introduction (C'ed)

- ESOC initiative to achieve **highest MOI quality** at **minimum cost**:
 - ⇒ establish **End-to-End Ground Segment Reference Facility** (E2E GS RF)
 - ⇒ one-stop environment for **MOI System level Integration and Testing**
 - ⇒ effectiveness through **representativeness**
 - ⇒ efficiency through:
 - Usage **throughout** system engineering lifecycle
 - **convergence** of various integration and test environments
 - deployment of **automation** wherever possible

The E2E Ground Segment Reference Facility

vs.

- ⇒ issues detected late, sometimes during operations
- ⇒ hard reproducibility
- ⇒ difficult investigations

The E2E Ground Segment Reference Facility (C'ed)

- Engineering testing is mainly requirements driven
- Enhanced by integration of **operational** usage:
 - ⇒ mission **representative** test **chains**
 - ⇒ mission **representative** test **scenarios**
 - ⇒ as **early** as possible in the systems engineering lifecycle

The E2E Ground Segment Reference Facility (C'ed)

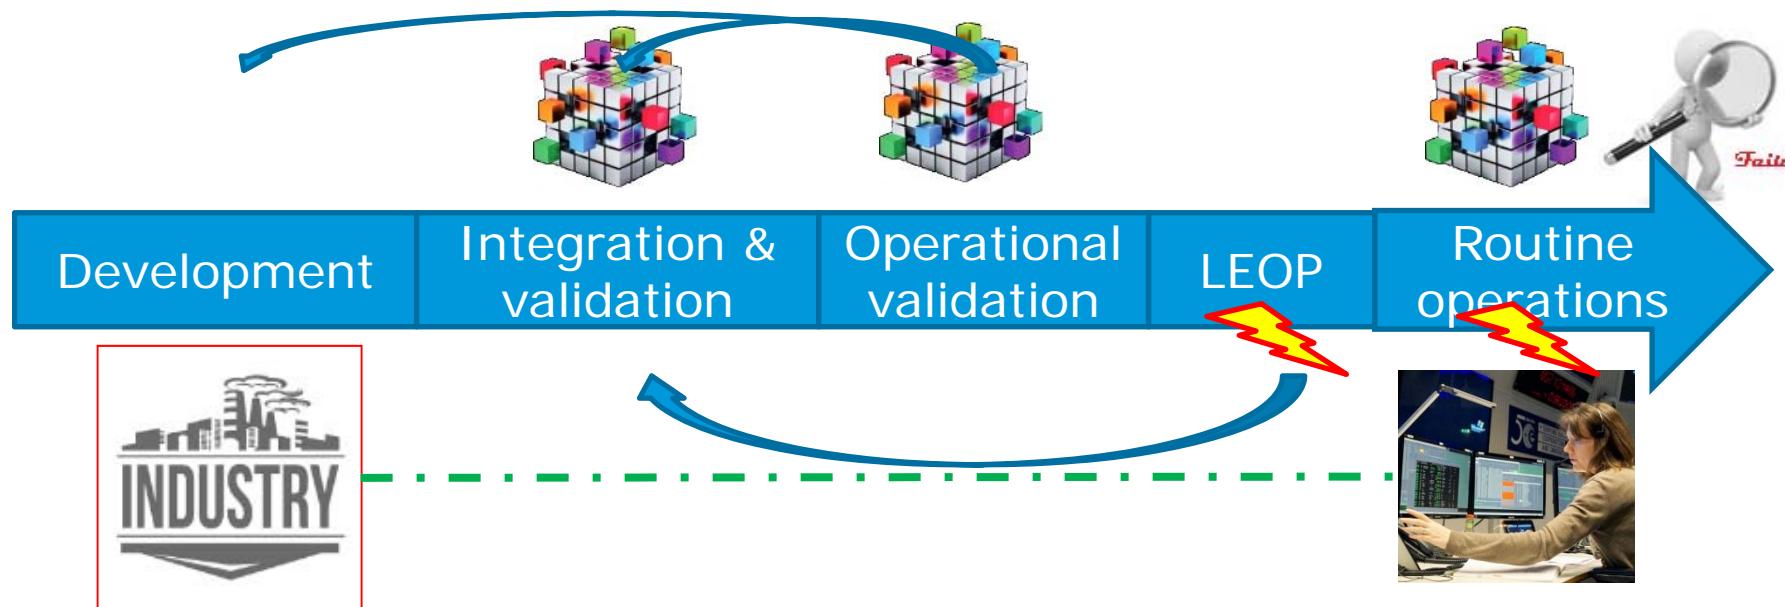

- The E2E GSRF:
 - a **coherent** Ground Segment Integration and Test as a Service (**ITaaS**) system
 - Ground Segment E2E **reference**, mission **representative** I&T Environment
 - Reference Test Scenarios and Test Cases on **mission-based** configurations
 - Highly **automated** environment and test execution
 - Platform for **sharing** knowledge, experience and expectations in multi-disciplinary team
 - **cross-fertilisation** among **engineering** domains and with **operations**

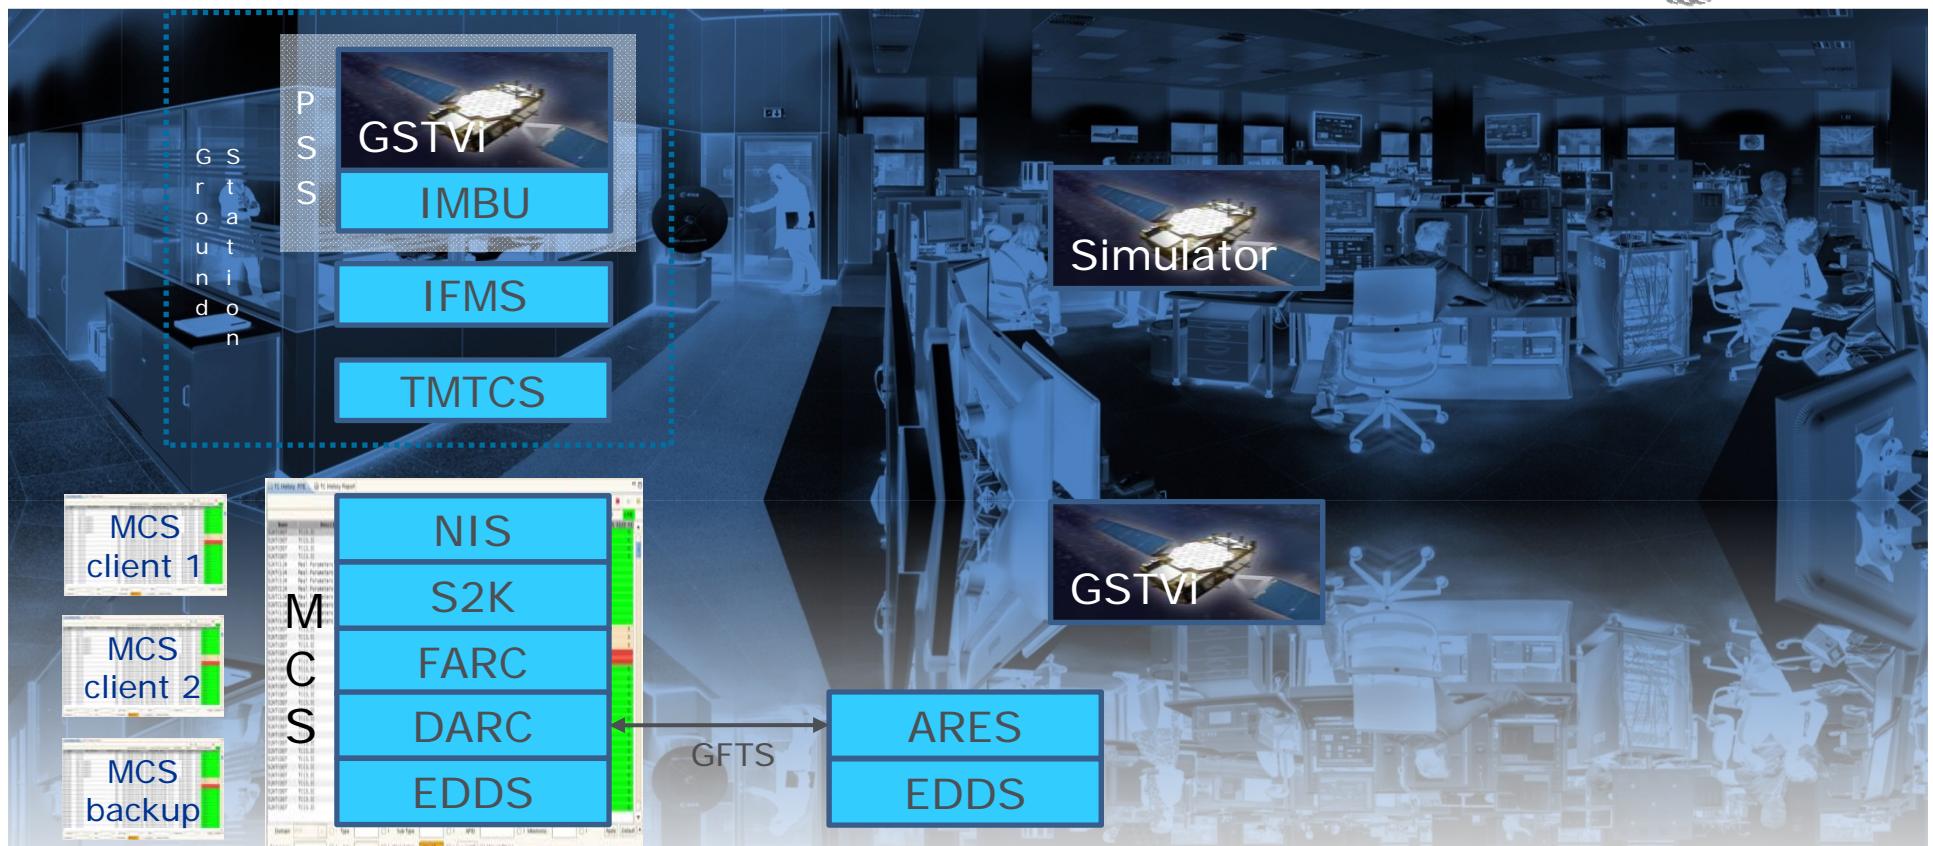

The E2E Ground Segment Reference Facility (C'ed)

- A single, standardised reference throughout the MOI systems lifecycle:

The E2E GSRF Architecture

The E2E GSRF Architecture (C'ed)

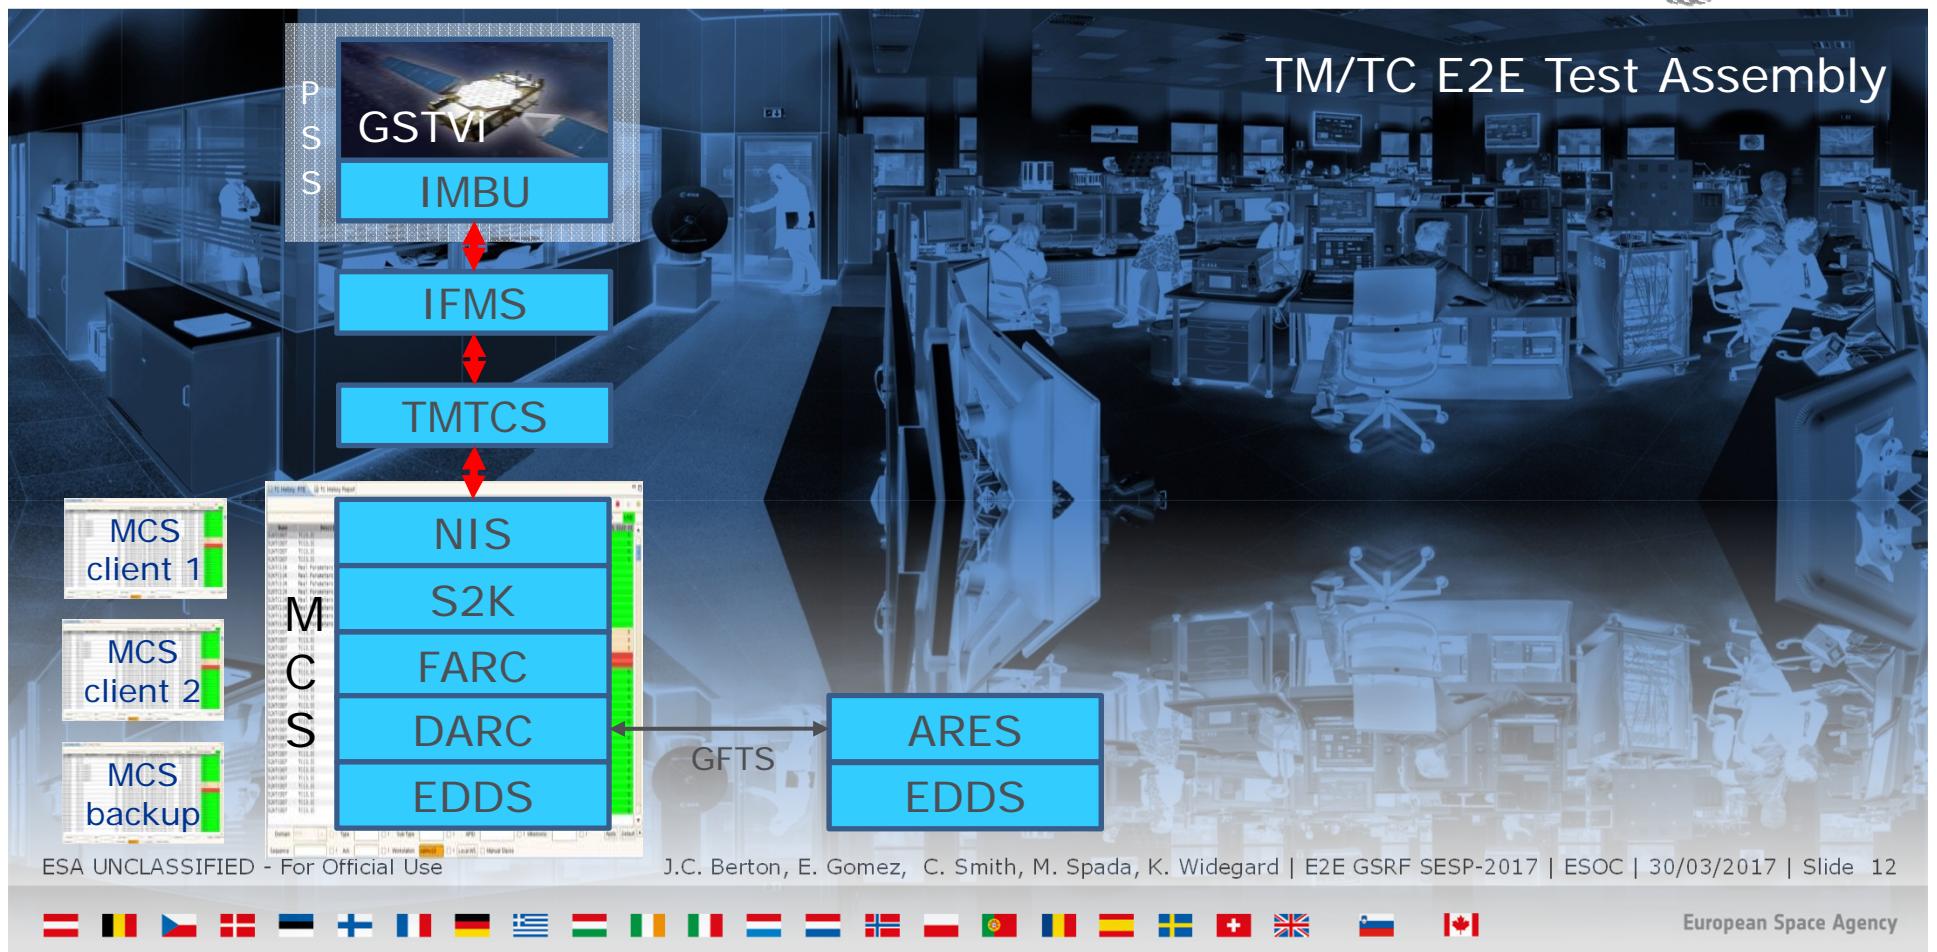

Basic TM/TC Test Assembly

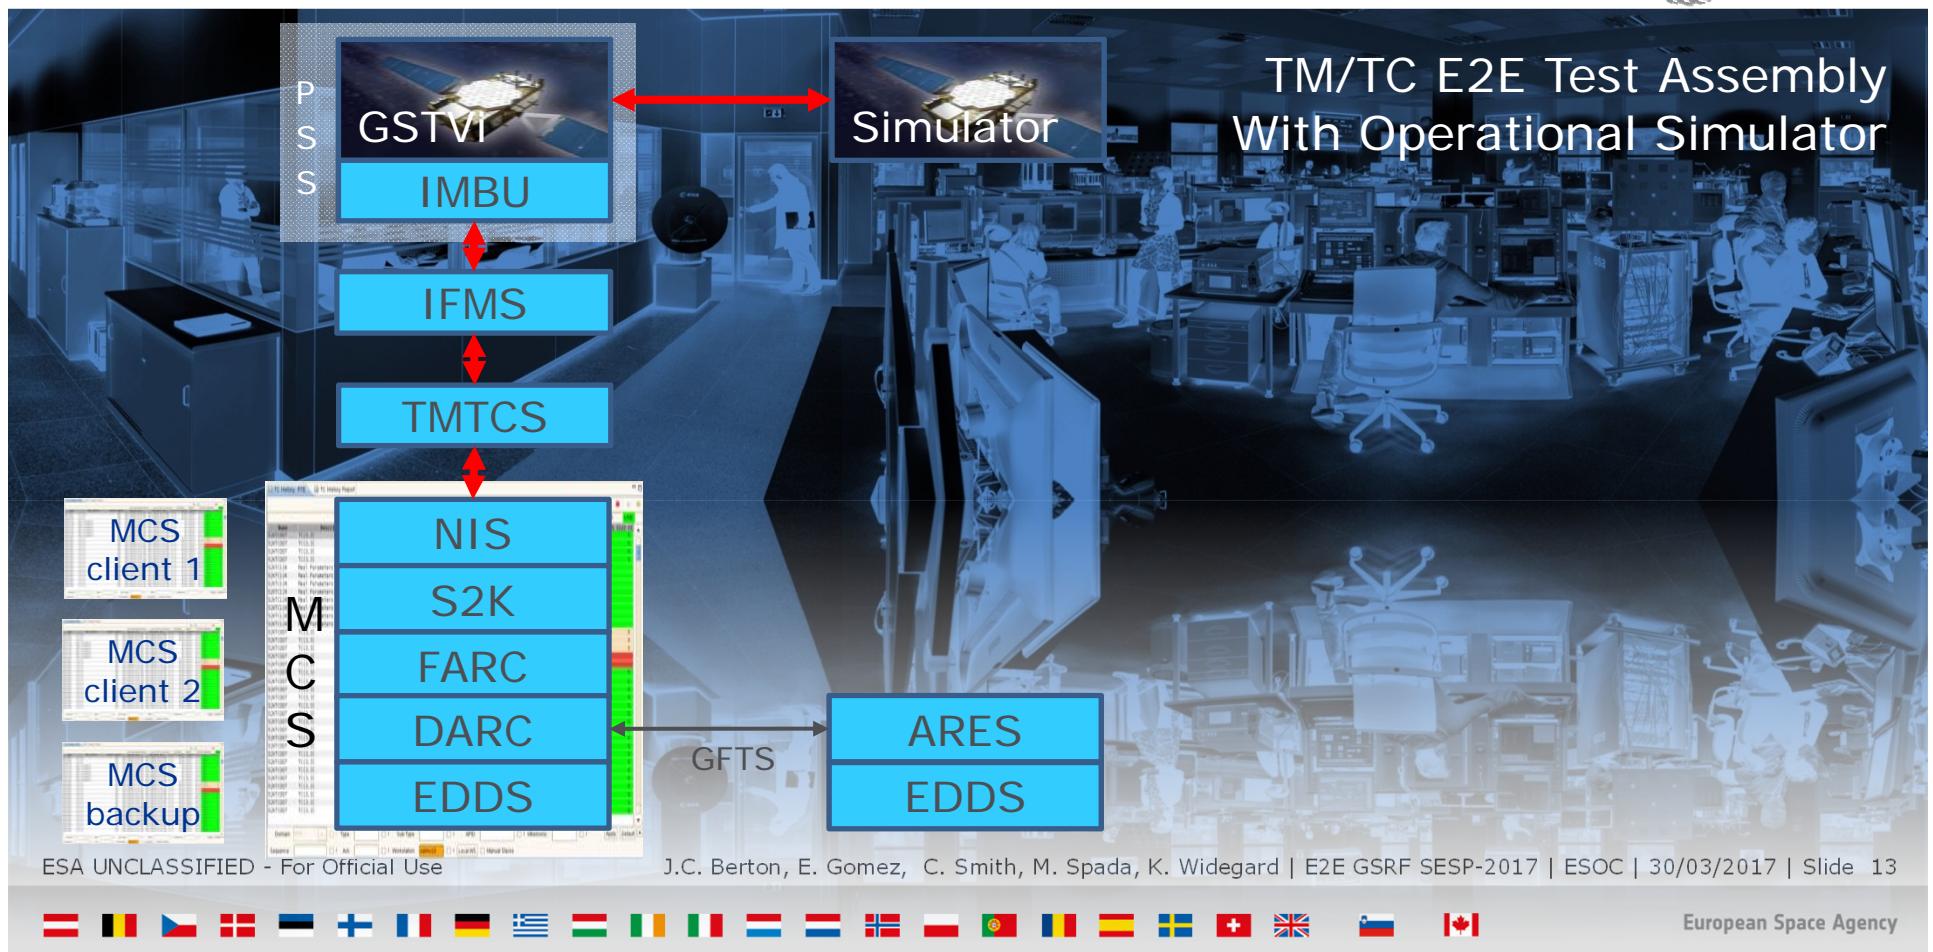

The E2E GSRF Architecture (C'ed)

The E2E GSRF Architecture (C'ed)

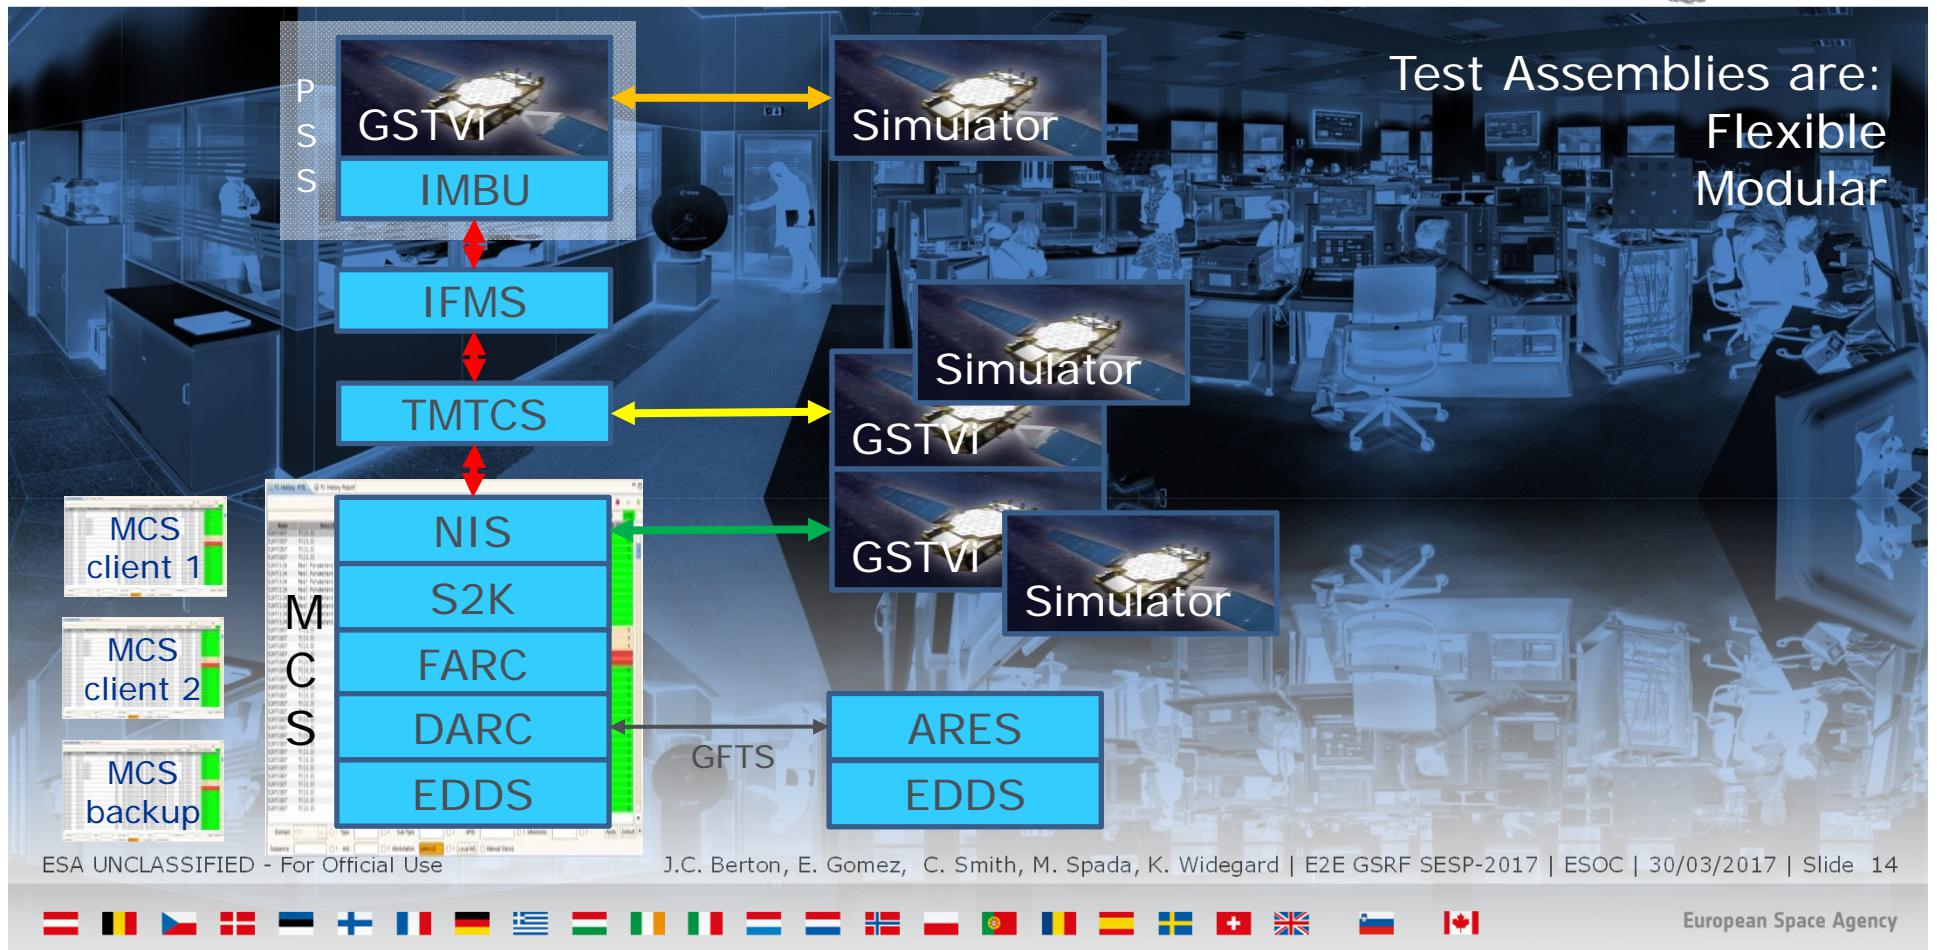

The E2E GS RF Architecture (C'ed)

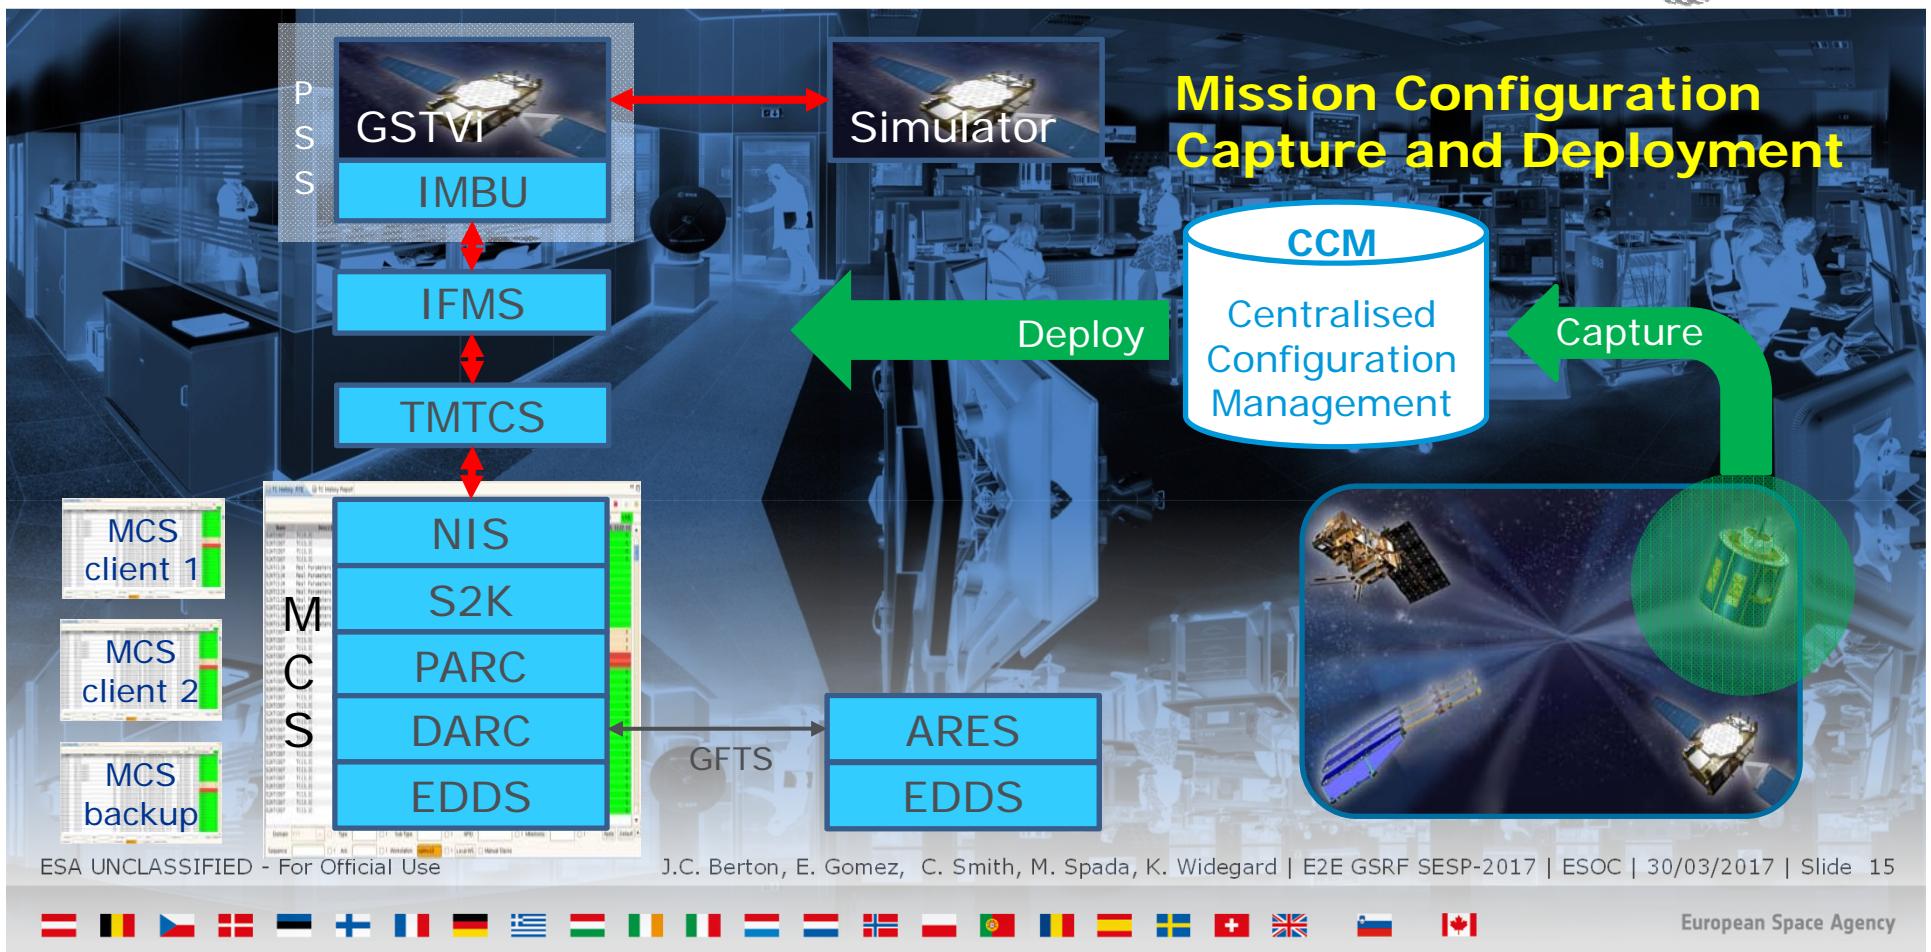

The E2E GSRF Architecture (C'ed)

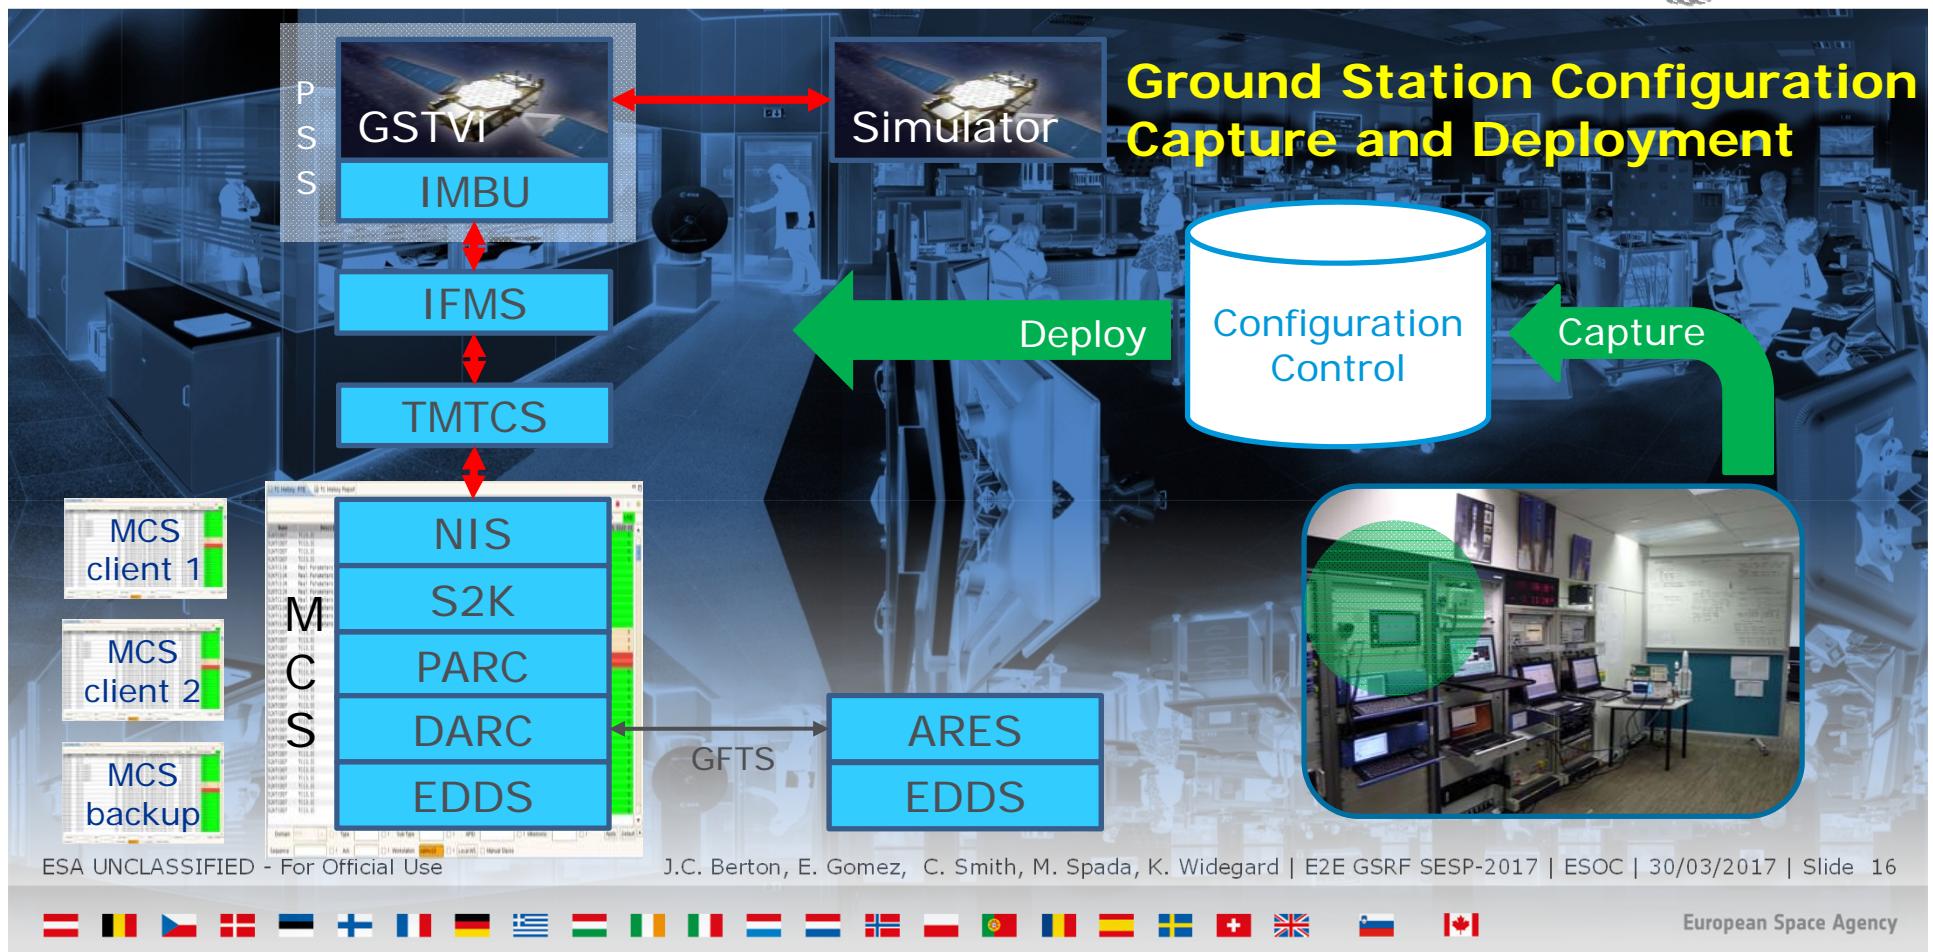

Test Assemblies are:
Flexible
Modular

The E2E GSRF Representativeness

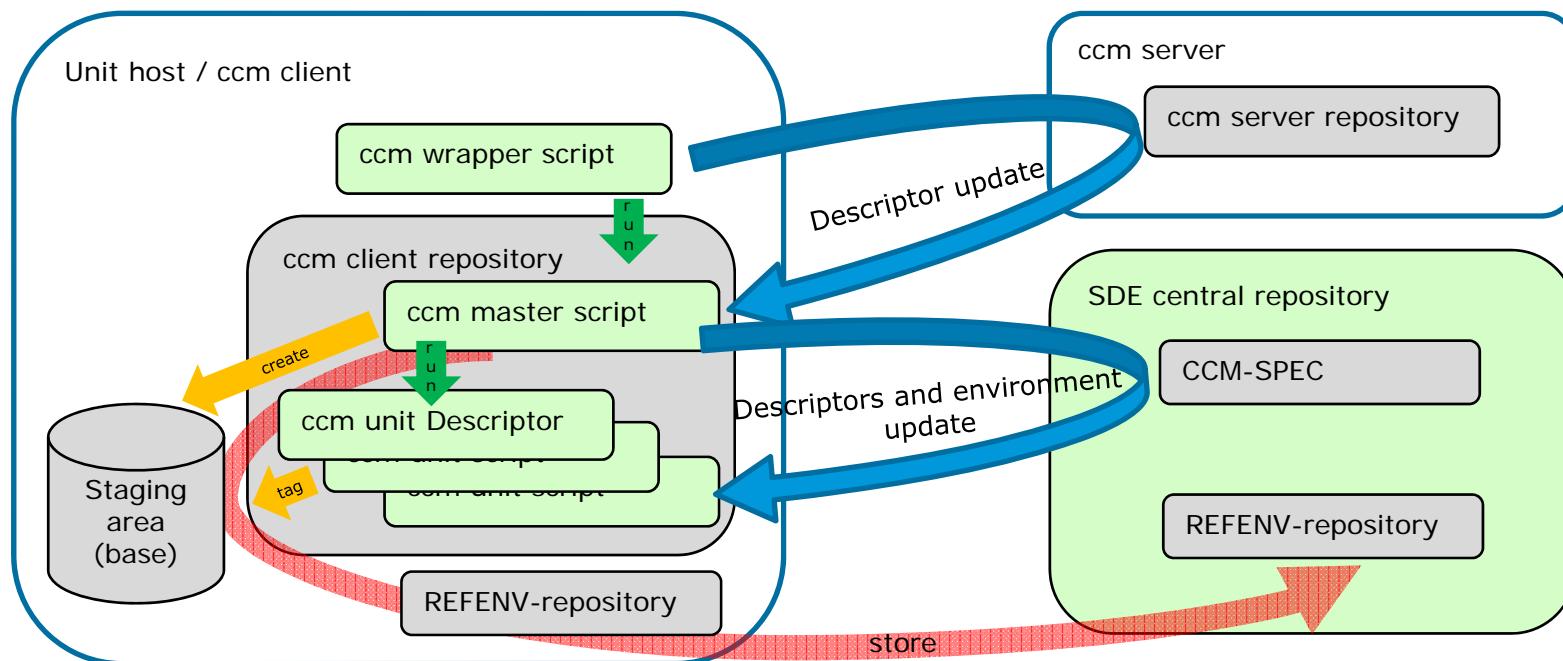

The E2E GS RF Representativeness (C'ed)

The E2E GSRF Representativeness (C'ed)

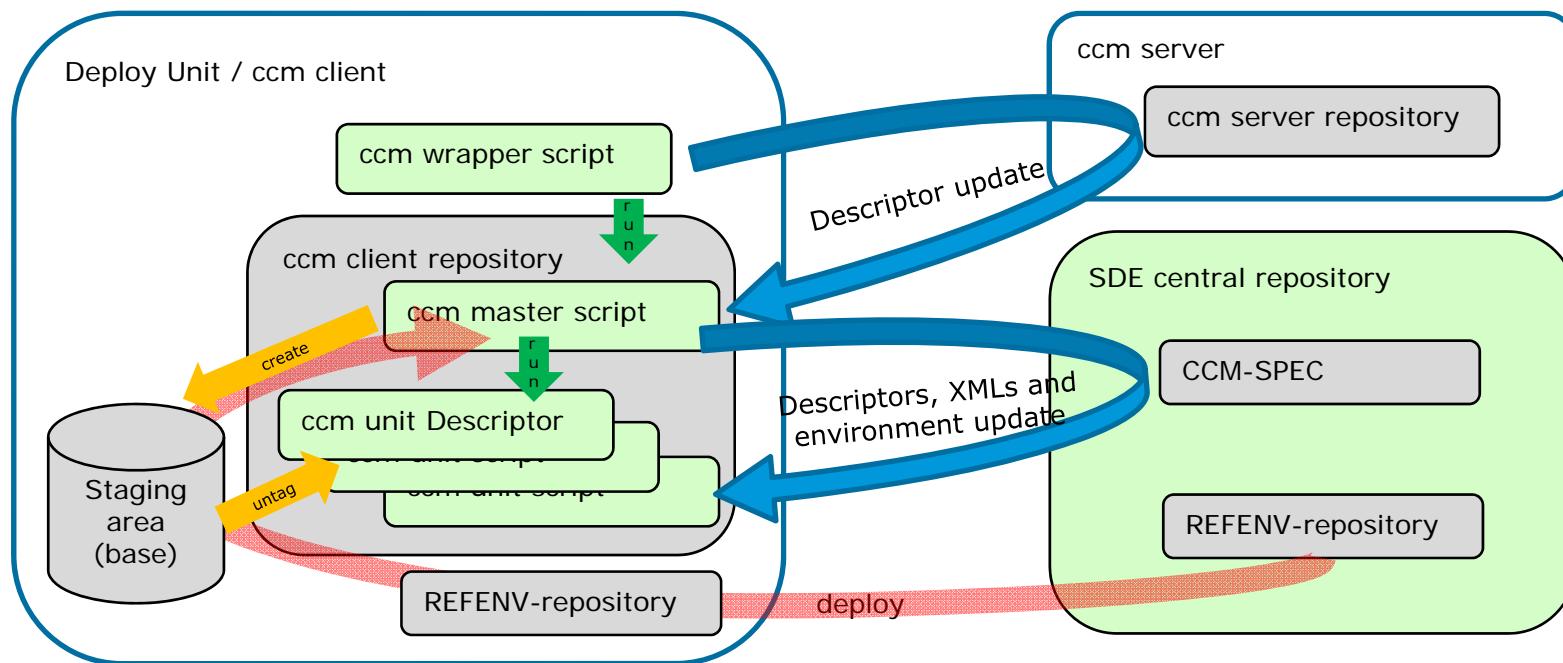

- **Centralised Configuration Management (CCM) – Capture process**

The E2E GS RF Representativeness (C'ed)

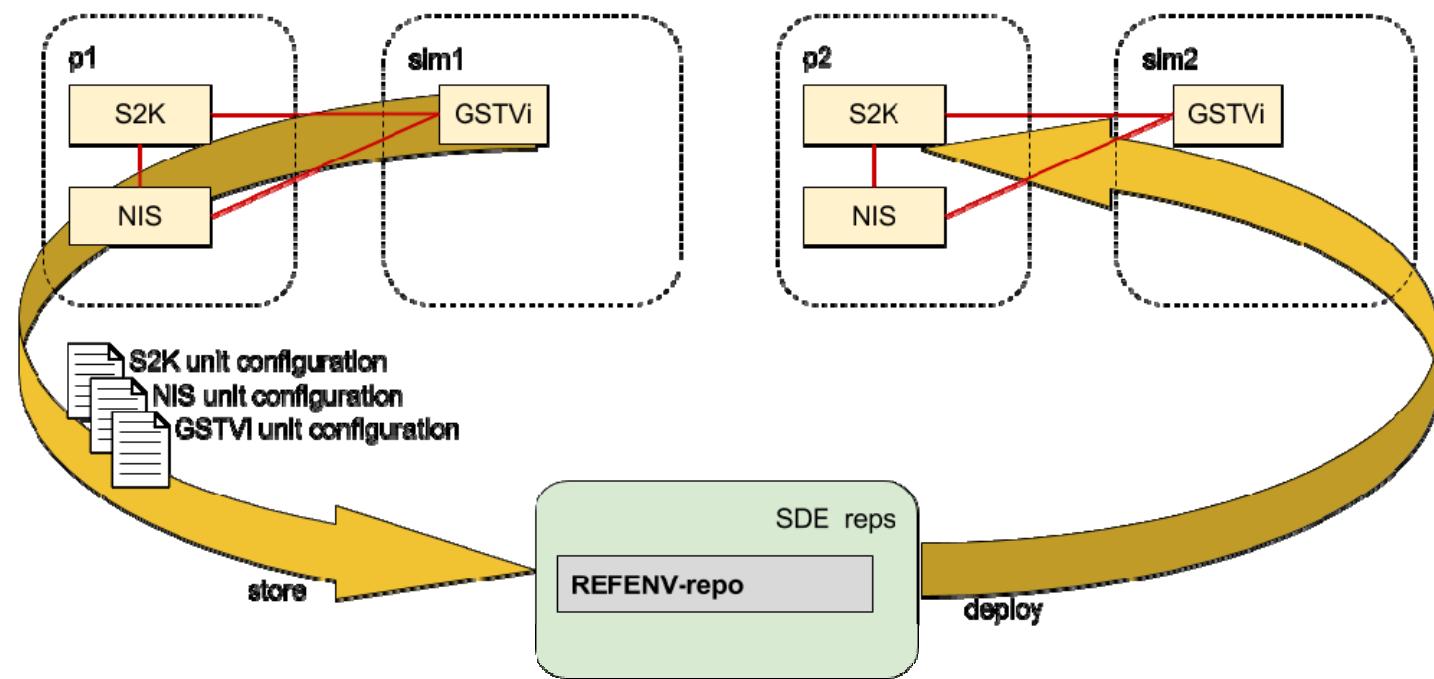

- Centralised Configuration Management (CCM) – Deployment process

The E2E GSRF Representativeness (C'ed)

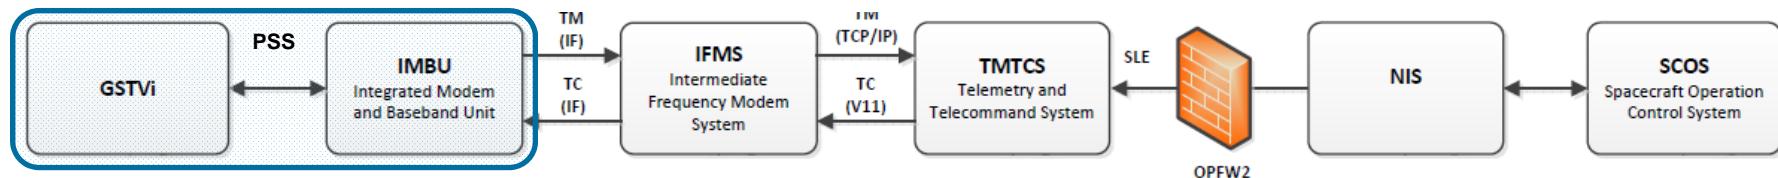

- Centralised Configuration Management (CCM) – Test Assemblies

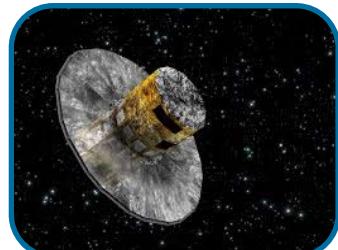

The E2E GSRF Representativeness (C'ed)

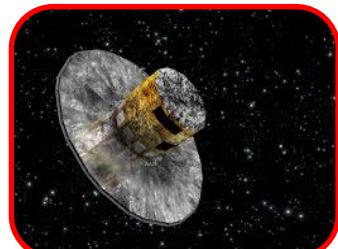

- Test Assemblies

SLES11

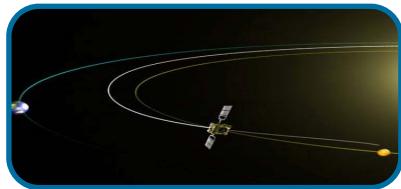

SLES12

The E2E GS RF Representativeness (C'ed)

- **Test Scenarios and Test Cases Suite**

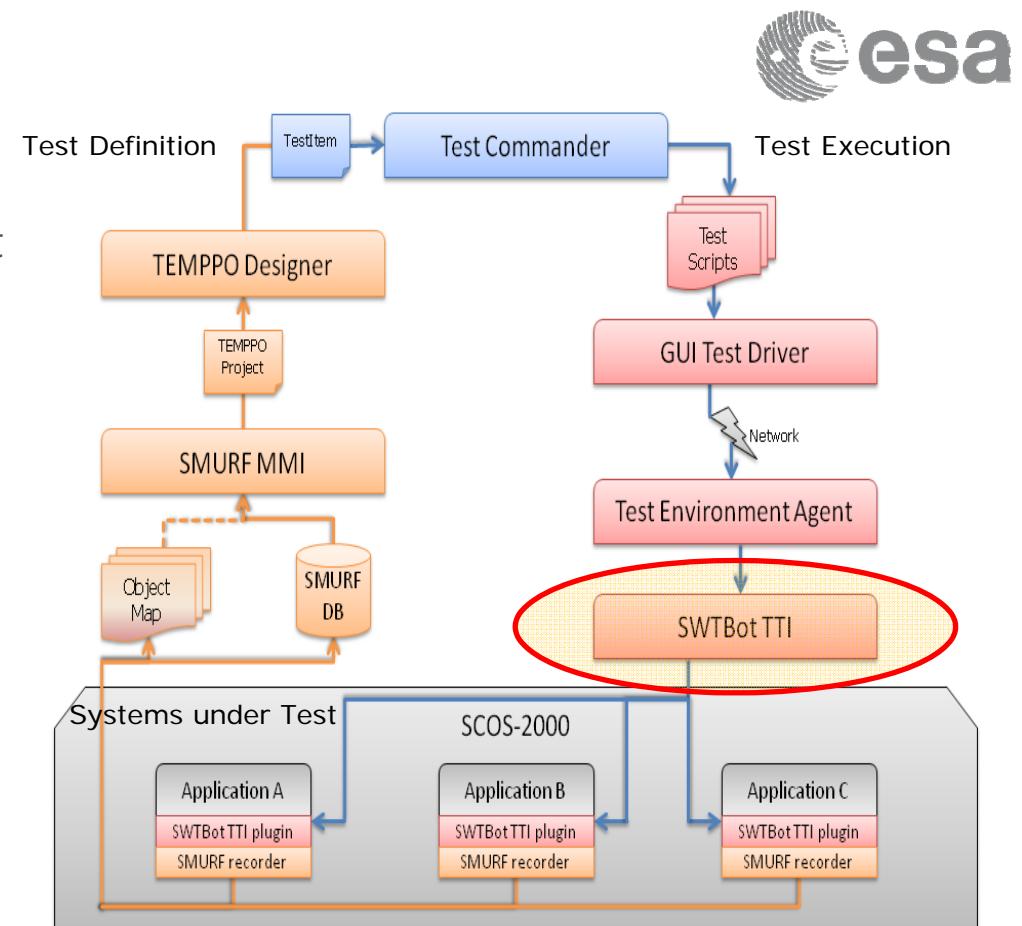

- **Test categories**

- Confidence Tests: environment sanity checks
- System Tests: non-regression testing
- E2E Tests: complex mission scenarios or performance testing

Test Automation

- Automation
⇒ efficiency in a complex environment
- Reuse of ART/MMIT
⇒ evolve existing capabilities
- Replication of user actions
⇒ Representativeness breakthrough

Test Automation (C'ed)

- The Test Commander functionalities:
 - executes commands
 - provides results
 - debugging capability
 - production of test reports
 - system state recovery

The screenshot shows the Test Commander 1.0 application window. The menu bar includes File, Edit, Run, Reports, View, Debug, and Help. The main pane displays a test case named 'TECO_Basic_Instructions_1' with a type of 'Task Coverage'. A table lists 8 test steps with their details:

Index	Stepname	Result	Criticality	Timeout	Exp. fail	Instruction	Exp. result	Parameter 1	Parameter 2
0	PASS	Passed	MAJOR	0	0	PASS	0		
1	Sleep	Passed	MAJOR	0	0	SLEEP	0	time=1000	
2	Set_Variable	Passed	MAJOR	0	0	VSET	0	name=TESTVAR1	value=TESTVAL1
3	Verify_Var	Passed	MAJOR	0	0	VCHECK	TEST.+1	name=TESTVAR1	
4	Unset_Var	Passed	MAJOR	0	0	VSET	0	name=TESTVAR1	value=
5	Verify_Emptyvar	Passed	MAJOR	0	0	VCHECK	^\$	name=TESTVAR1	
6	Test_Prompt	Failed	MAJOR	0	0	PROMPT	0	text=Please say yes.	
7	C_Shell	Not Executed	CRITICAL	0	0	SHELL	0	script=/bin/csh	flags=-f
8	Bourne_Shell	Not Executed	CRITICAL	0	0	SHELL	0	script=/bin/sh	file=/dev/null

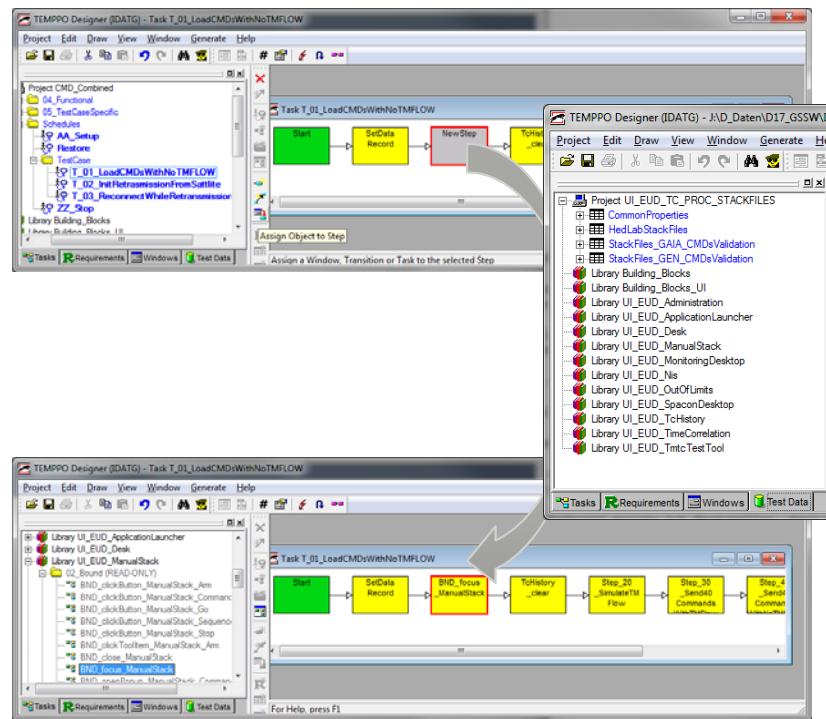

Below the table, there are sections for 'Step Description' and 'Expected Result Text'. The 'Messages' section at the bottom contains log entries:

```
[2005-280T11:59:13 I] Test step #5 (Name=Verify_Emptyvar) executed successfully.  
[2005-280T11:59:13 I] Executing step #6 (Name=Test_Prompt). Command to execute: PROMPT 0 (text {Please say yes.}) (descr {This is t  
[2005-280T11:59:16 W] Test step status: Failed Error code=1; Error info=Selected button with value=1 does not correspond to the expected  
[2005-280T11:59:16 F] Test case 'TECO_Basic_Instructions_1' failed
```

Test Automation (C'ed)

- Issues to be addressed:
 1. Test abstraction
 2. Test reusability
 3. Mapping/recognition of controls
- The Test Management tool (TEMPO):
 1. Contains a set of nested building blocks
 2. Building blocks are parametrised (libraries)
 3. Manages object maps (control details)

Test Automation (C'ed)

- Scalability: a 5-tiers approach

1. Actions common to most controls	Valid across subsystems
2. Link actions to specific widgets	
3. Combine a set of actions into complex ones	Subsystem specific
4. Combine complex actions to match functionalities	
5. Combine functionalities in common test sequences	Assembly specific

Test Automation (C'ed)

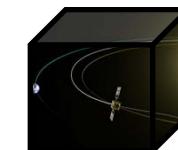

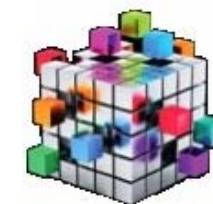

- Current status:
 - 8/12 hours of automated test cases (overnight continuous testing)
 - Automated tests are daily executed on different systems versions
 - Provision of reassurance of non-regression, reliability, robustness
- Lessons Learned:
 - GUI standardisation is critical
 - Need to repeat tests several times to separate spurious errors from regression
- Improvements:
 - Automated reporting of failed test steps
 - Provision of different testing views and levels of resolution granularity

Conclusions & Outlook

- ESOC focus on MOI **E2E** Integration & Testing
- E2E Ground Segment **Reference** Facility established
- High degree of **representativeness** and **automation**
- Offers ground segment systems **I&TaaS**
- **Throughout** systems engineering **lifecycle**
- Reproduction/troubleshooting of **complex** problems
- Extend usage from **suppliers** to **end users**
 - ⇒ **Earlier** and **combined** I&T activities
- Increased **cooperation** between stakeholder
 - ⇒ **Optimised** and **merged** IV&V processes

Conclusions & Outlook (C'ed)

- Future developments:
 - **automation** of system deployment and configuration
 - enable **continuous** integration and testing
 - include automated problem **root cause analysis** and forecasting
 - include system **security** testing
 - extend to E2E Reference Environment Space mission (**ERES**)
- E2E GSRF evolves towards future ground segment architecture based on new major developments, in particular **EGS-CC** based Monitoring and Control
