

# DAHLIA

Very High Performance Microprocessor for Space Applications

Jean-Luc Poupat (Airbus)  
ADCSS 2017

## **Introduction**

Consortium

Development Plan

DAHLIA Key Features

ARM Technology

Conclusion

# Context & Objectives

DAHLIA is an answer to the H2020 topic

*“COMPET-1-2016: Critical Space Technologies for European Strategic Non-Dependence”*

DAHLIA is an **ARM-based System on Chip** implemented in 28nm FDSOI technology designed to boost competitiveness and ensure strategic non dependence of future European Space equipment.

DAHLIA brings to reality what was still a dream few years ago, addressing the new expectations and new mindset of Space industry.

- Consortium**
- Development Plan
- DAHLIA Key Features
- ARM Technology
- Conclusion

# Organization

7 partners from 4 countries involving the main actors of European Space industry

- *ST France*, coordinator
- *Airbus D&S Germany & France*
- *Thales Alenia Space Italy & France*
- *ISD Greece & NanoXplore France*

**AIRBUS**

**ThalesAlenia**  
A Thales / Finmeccanica Company  
*Space*

**ST**

## SoC Services

Clocks & PLL

WatchDog

CCSDS OBTF

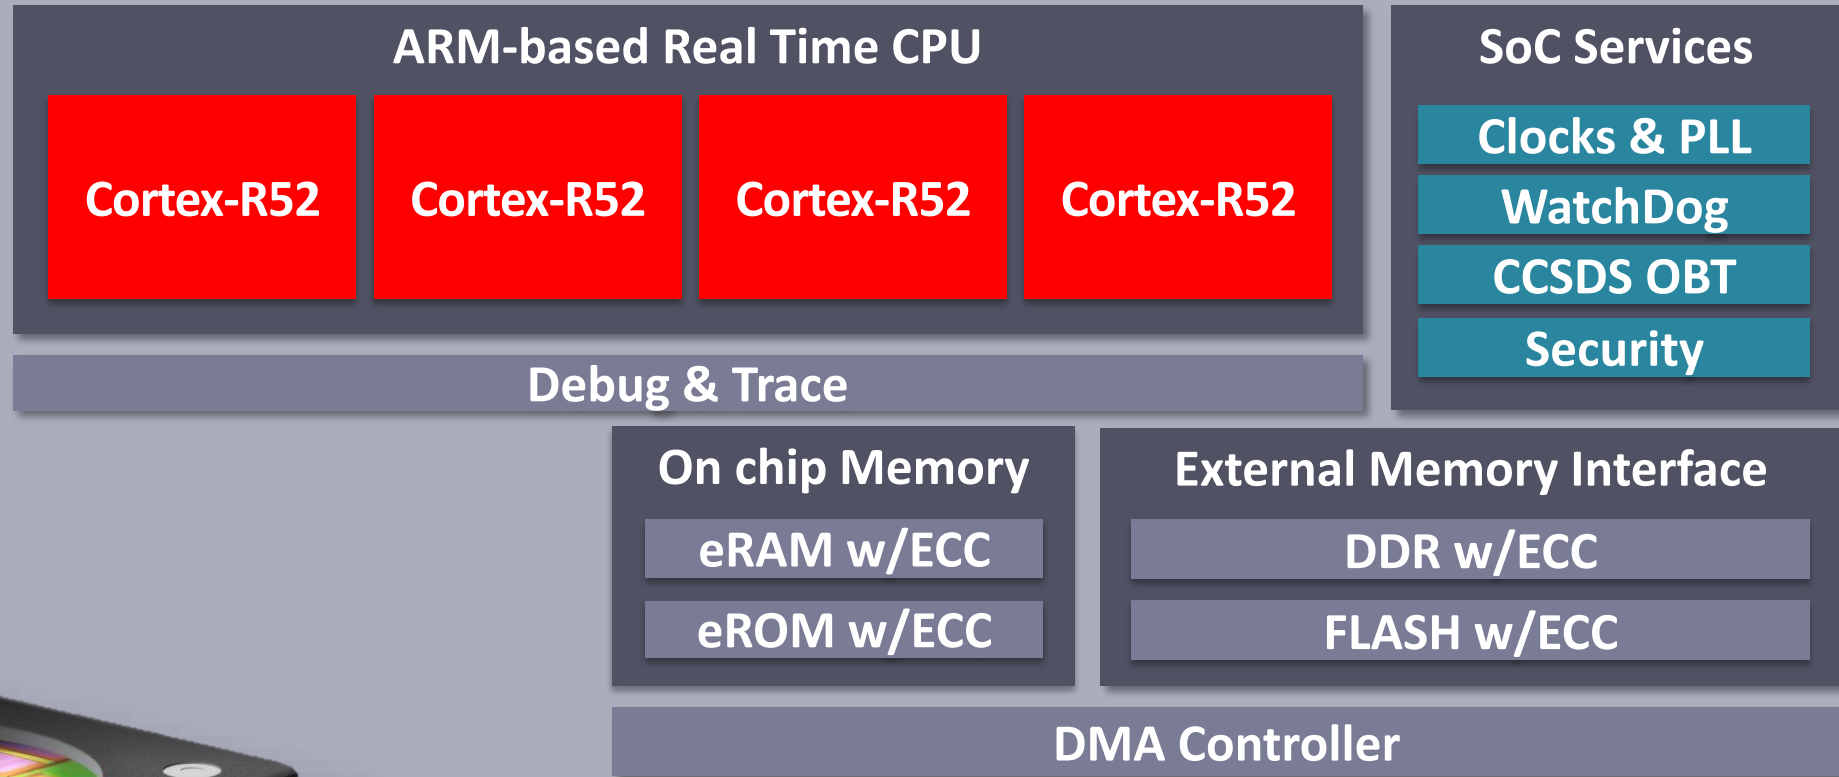

Security

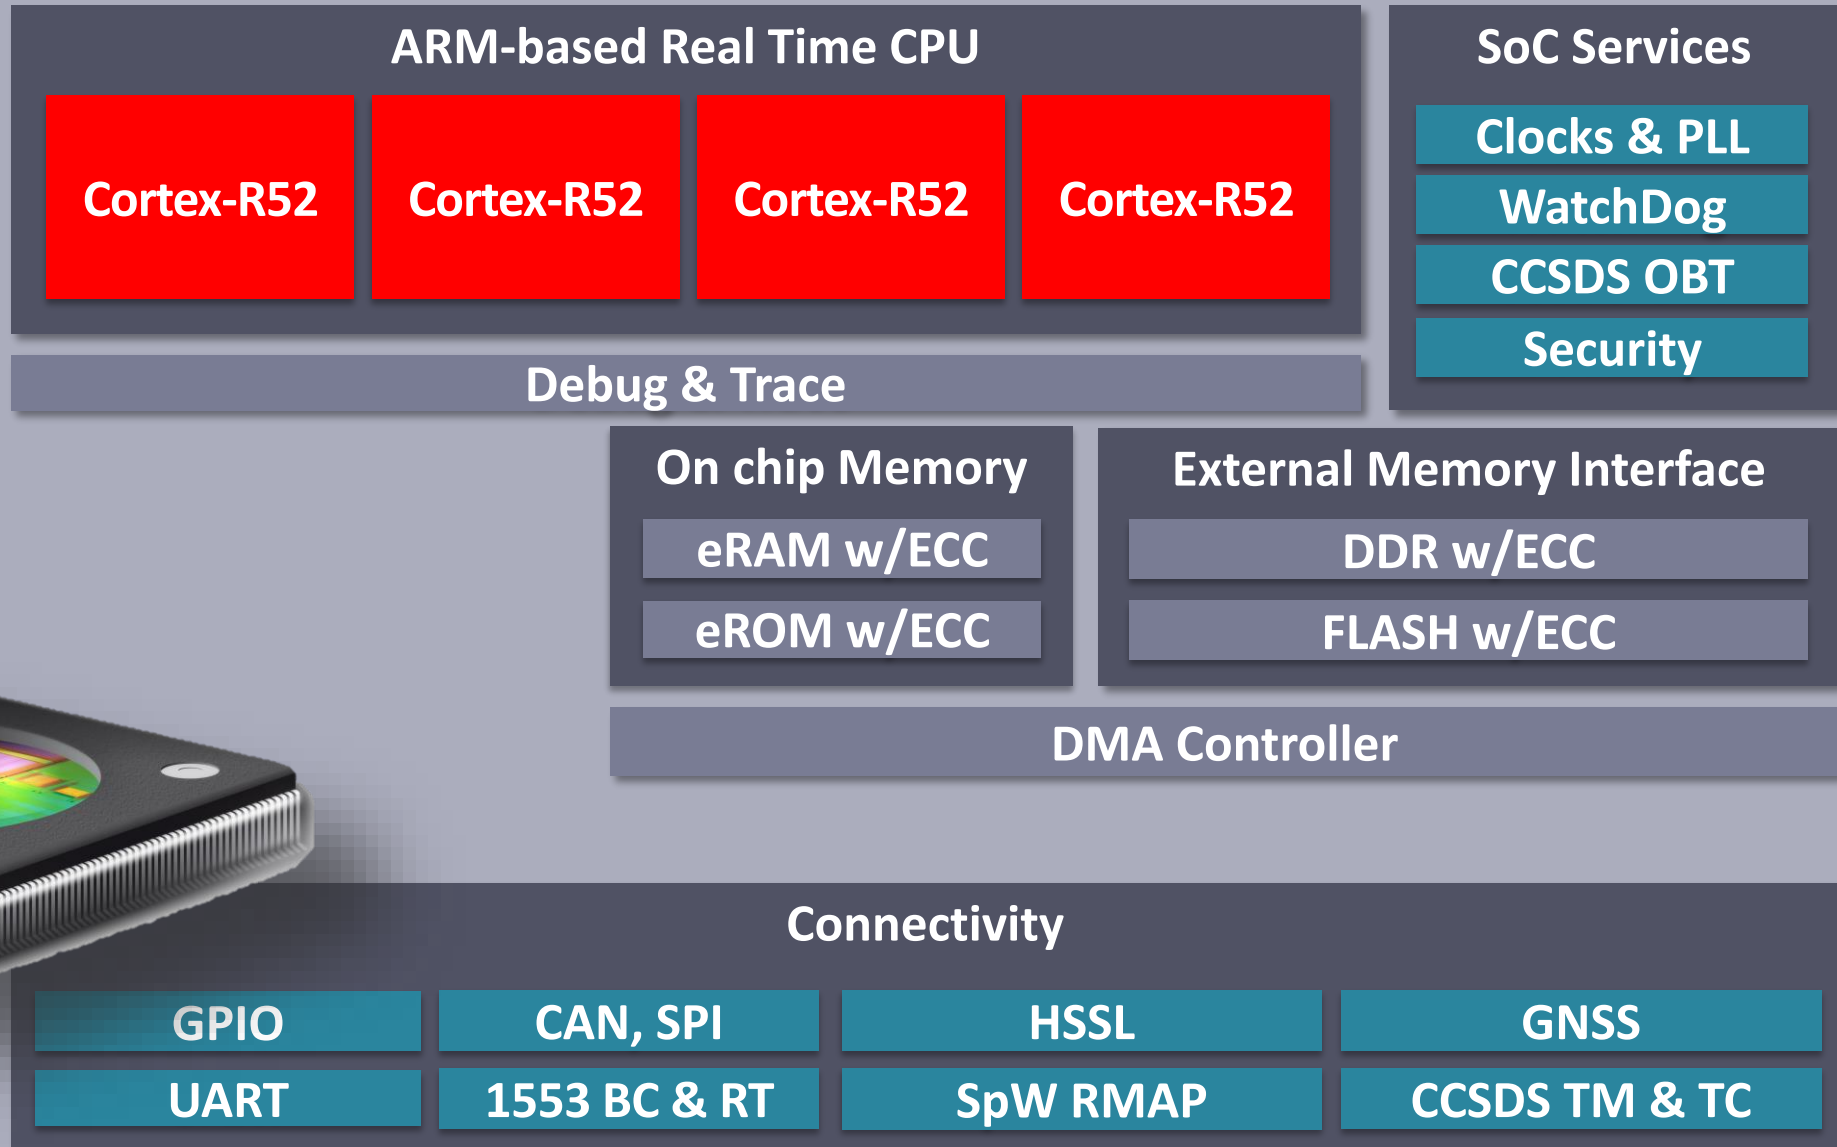

# Features

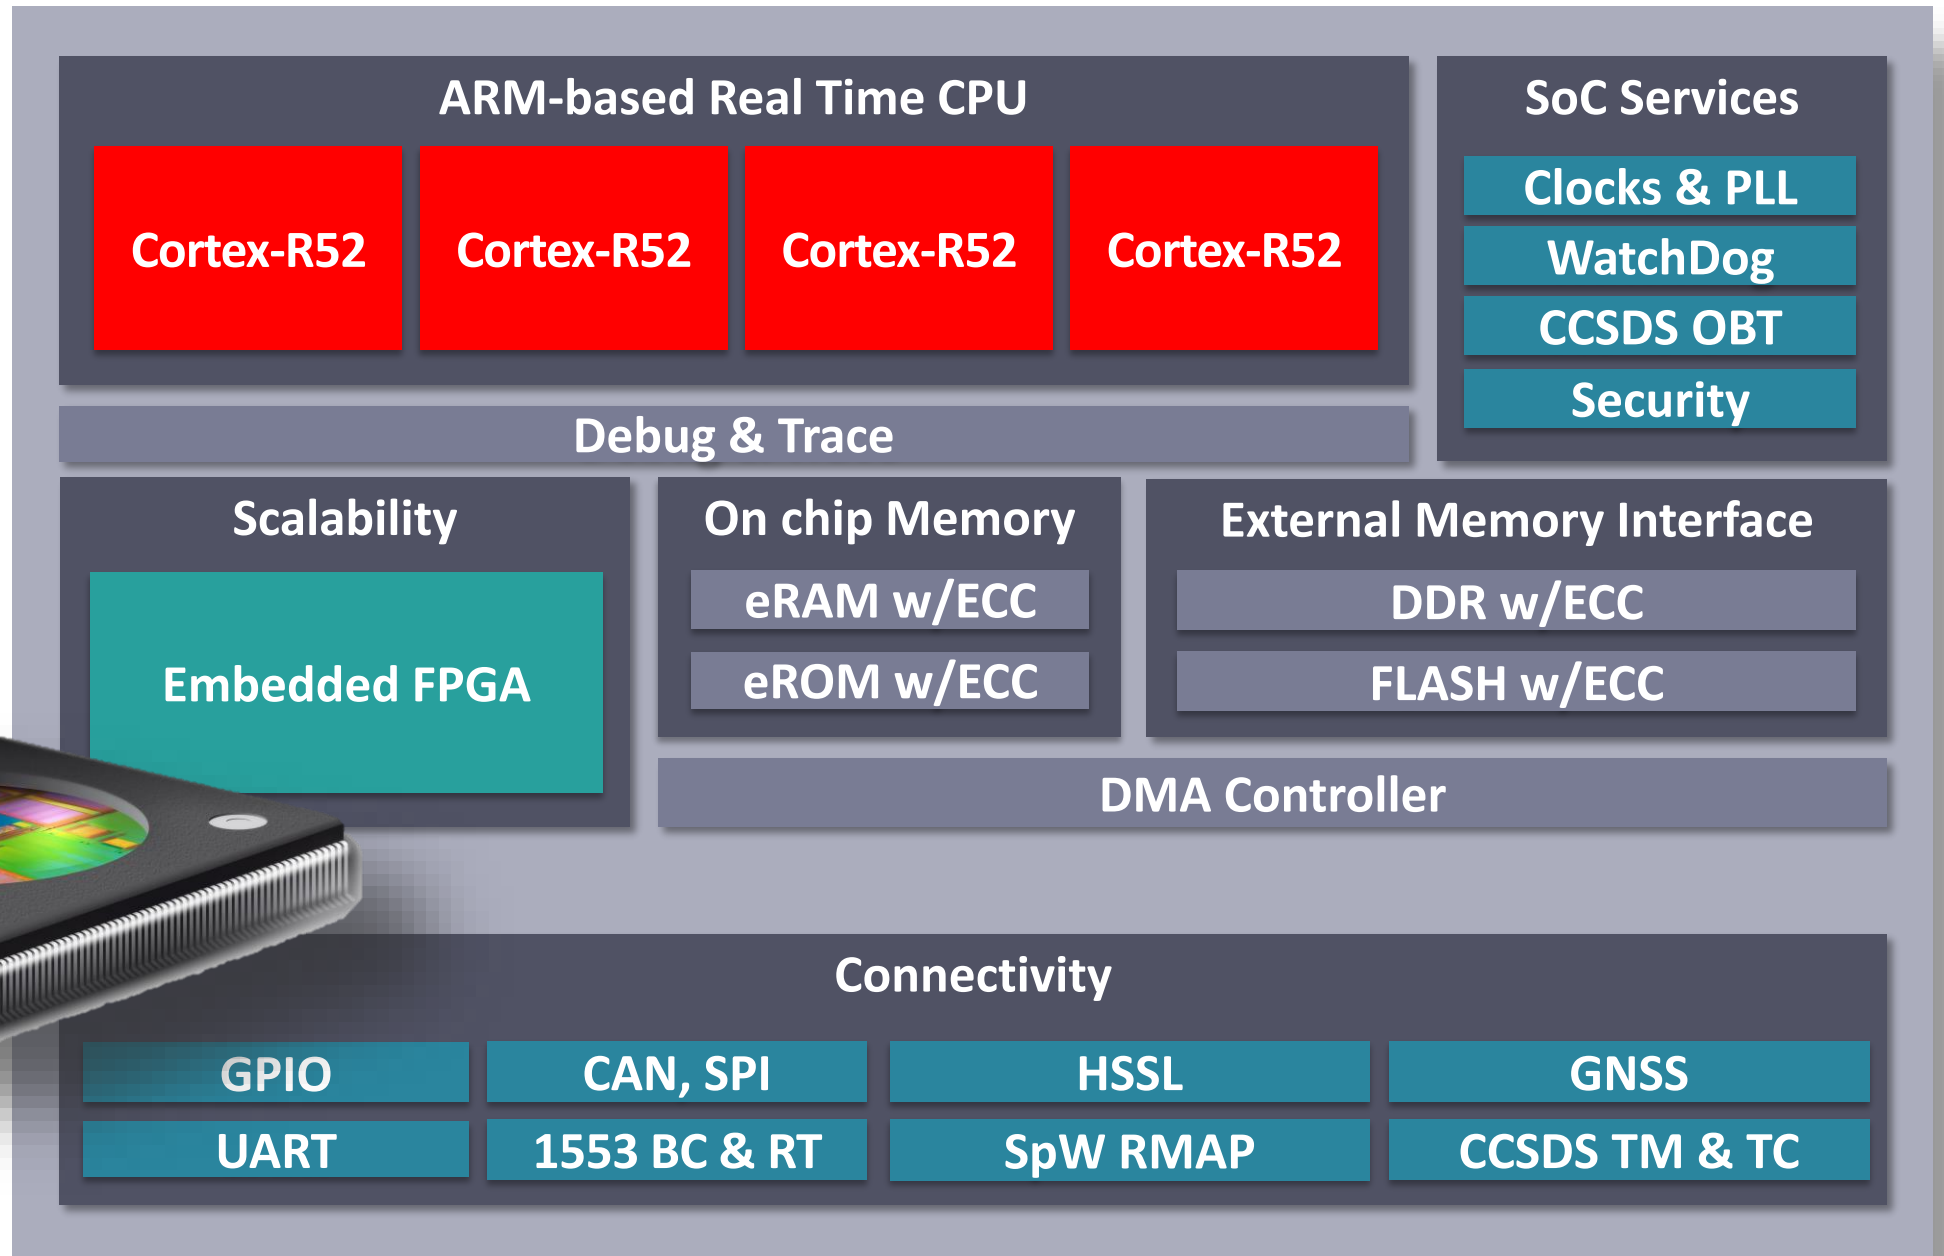

# Features

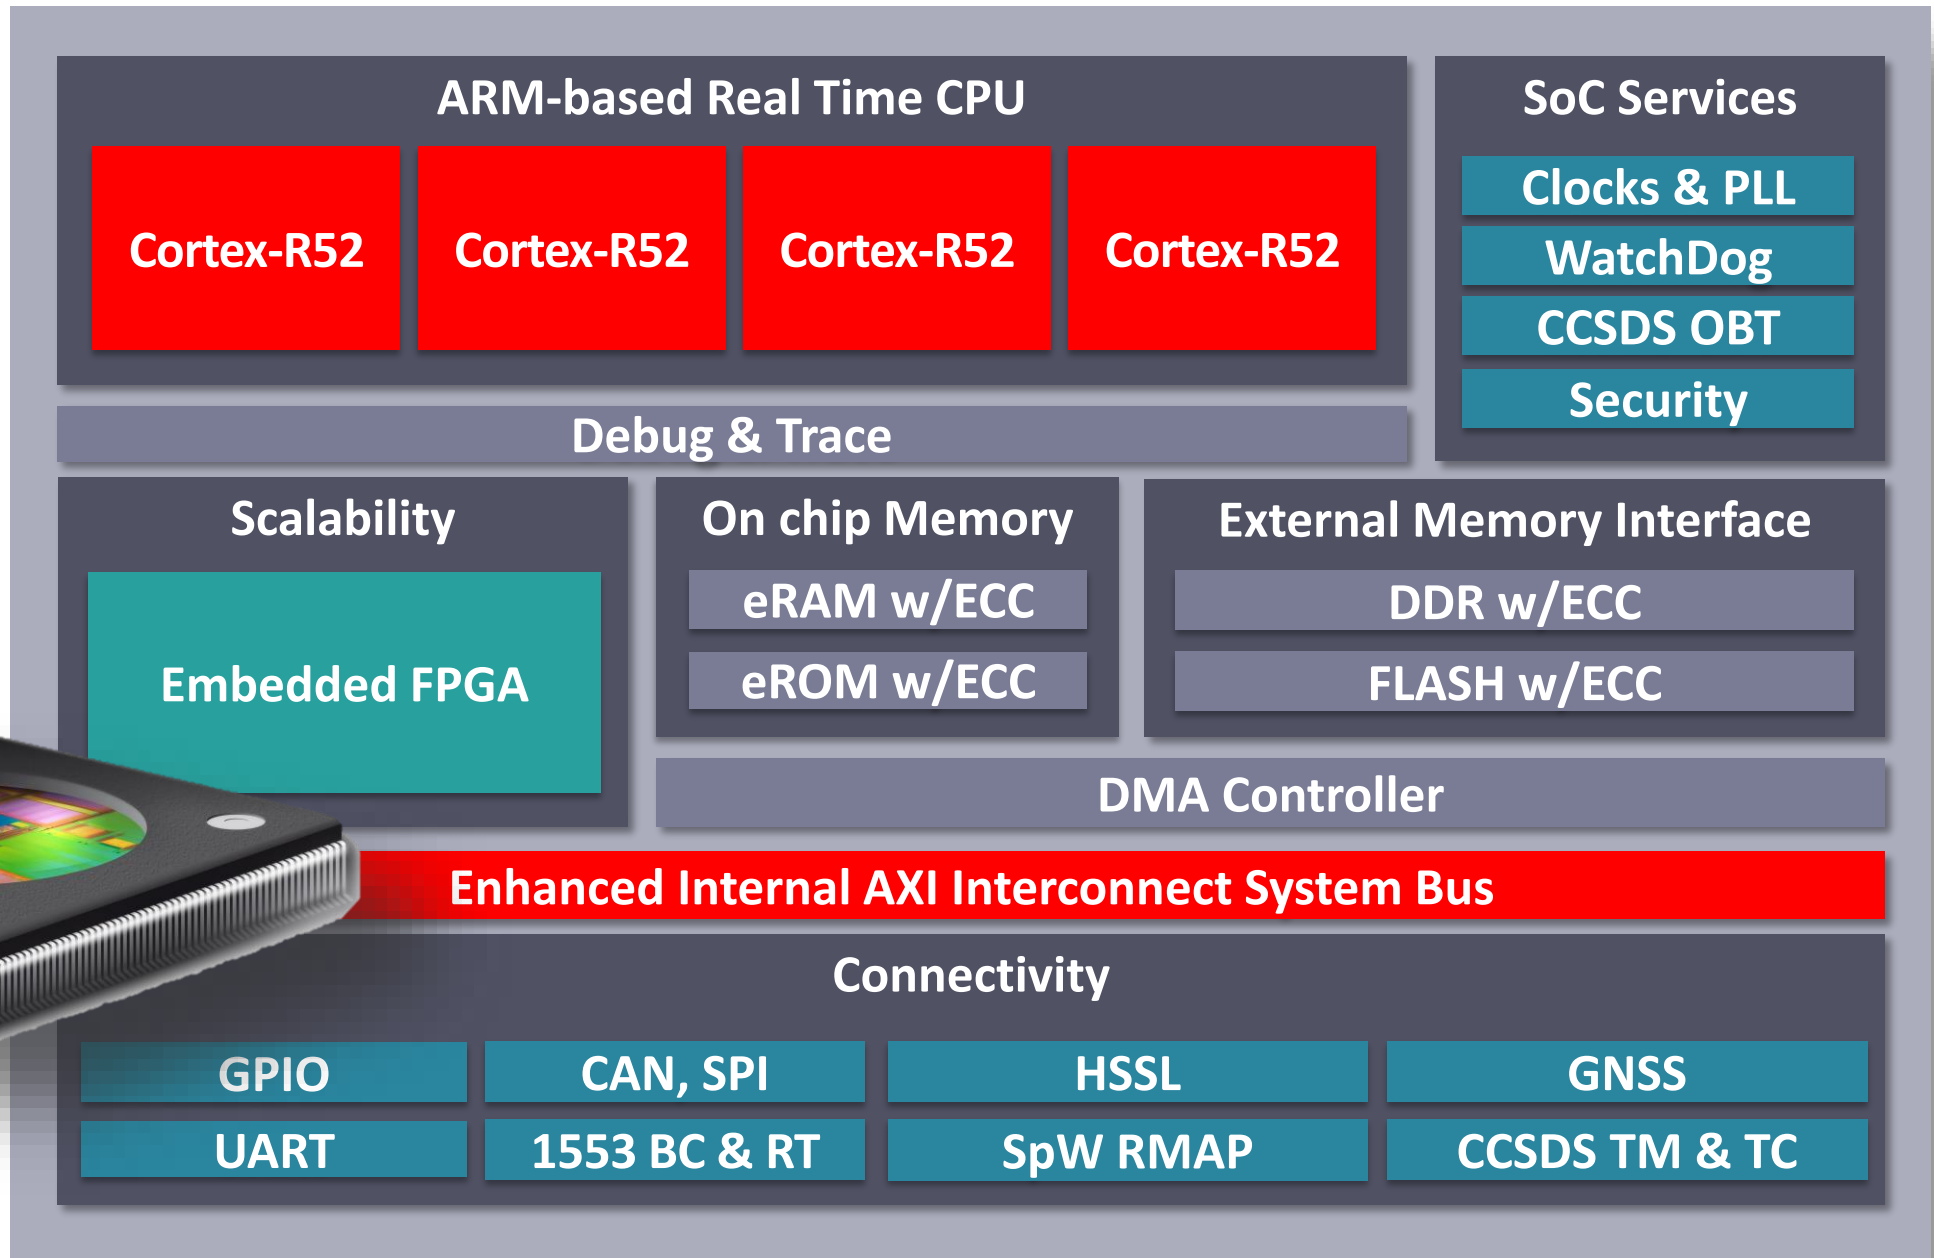

# Features

# Features

# Features

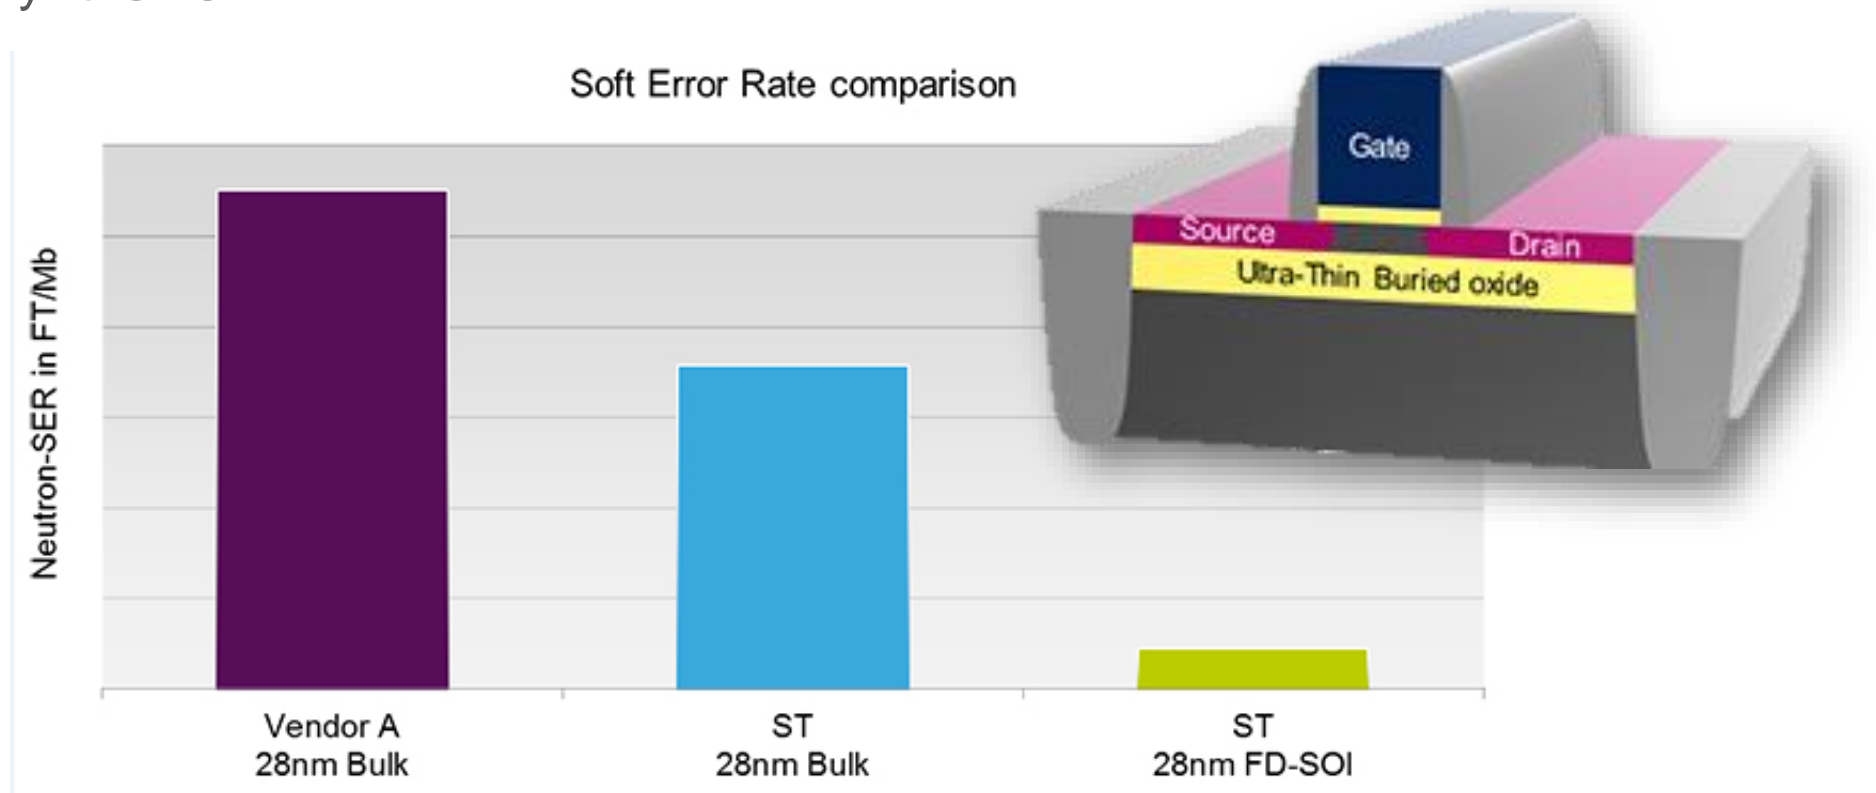

# STM 28nm FDSOI Technology

Intrinsically immune to Latch-up

Reduced pitch size providing good dose tolerance

Very good immunity to SEU

28 nm  $\rightarrow$  Moore's Law is (as usual) on our side

# Designed for ultimate performances

Introduction  
Consortium  
Development Plan  
DAHLIA Key Features  
**ARM Technology**  
Conclusion

# Why looking at ARM ?

# 100 BILLIONS OF CHIPS

# Why looking at ARM ?

- Wide dissemination of ARM CPUs in embedded systems
- Available as an RTL IP Core with full access to source code
- ARM ecosystem
- Code density better than its competitors
- Many development languages
- European technology (UK & FR)
- Low power
- Now focused on safety critical applications
  
- New SW development & environment
- ARM market business plan
- Radiation assessment

# ARM®

# ARM Technology Selection

## Cortex-A

Highest performance  
Optimized for rich operating systems

## Cortex-R

Fast response  
Optimized for high-performance, hard real-time applications

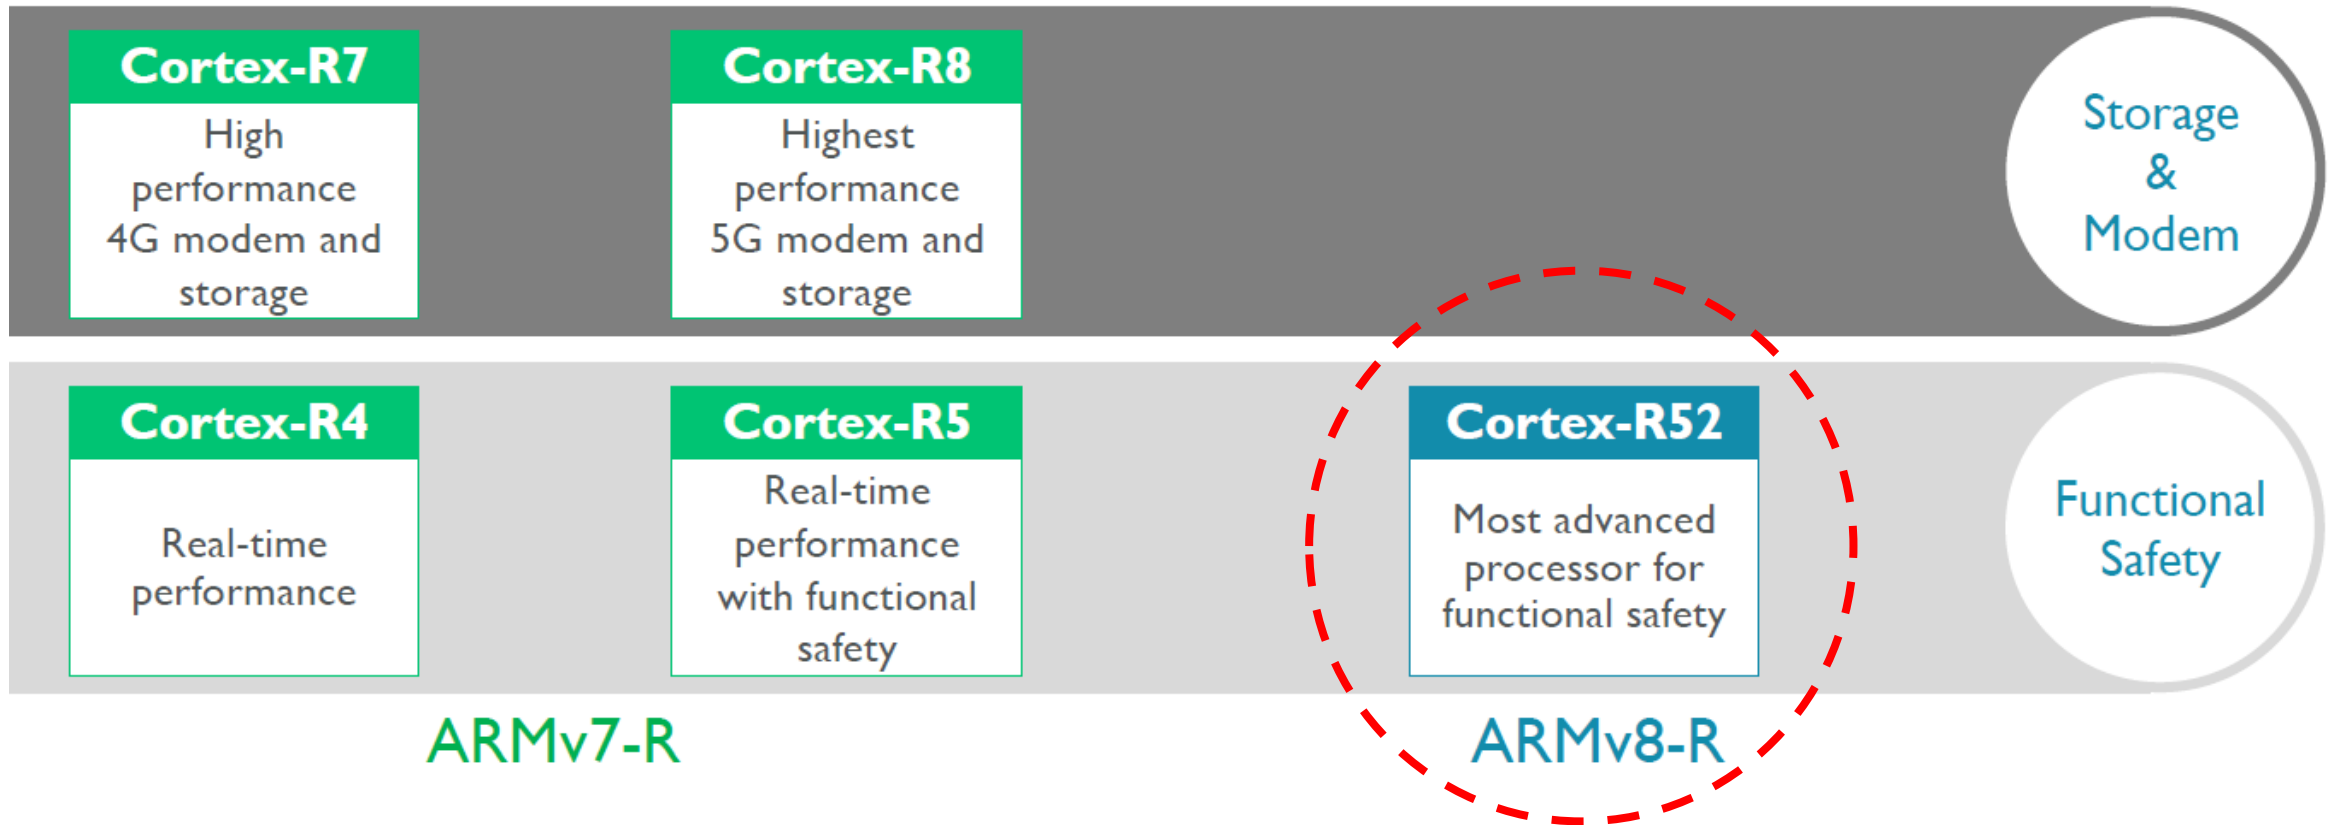

## Cortex-M

Smallest/lowest power  
Optimized for discrete processing and microcontroller

# ARM Technology Selection

# Cortex-R52

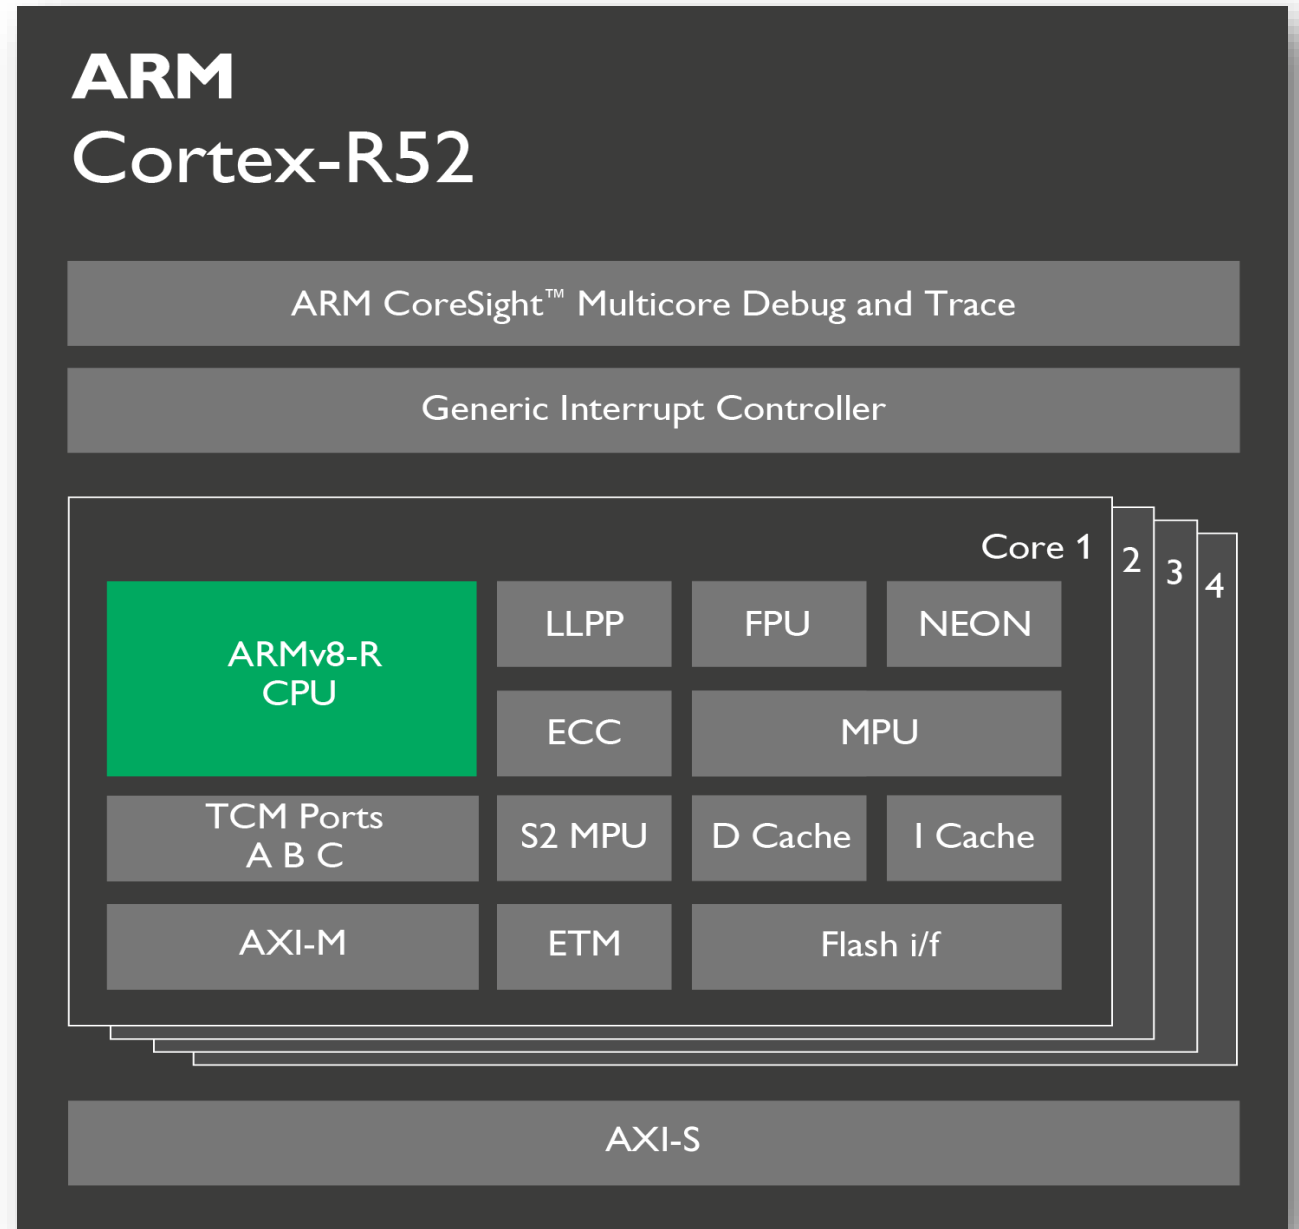

- ARM's most advanced processor for safety
- Dedicated for safety applications including automotive, industrial and healthcare
- Simplifies integration of software in complex safety systems

# Cortex-R52

Safety features dedicated to random errors

- ECC protected memory
- Software BIST libraries
- Error management
- Level 2 MPU
- New privilege level
- ...

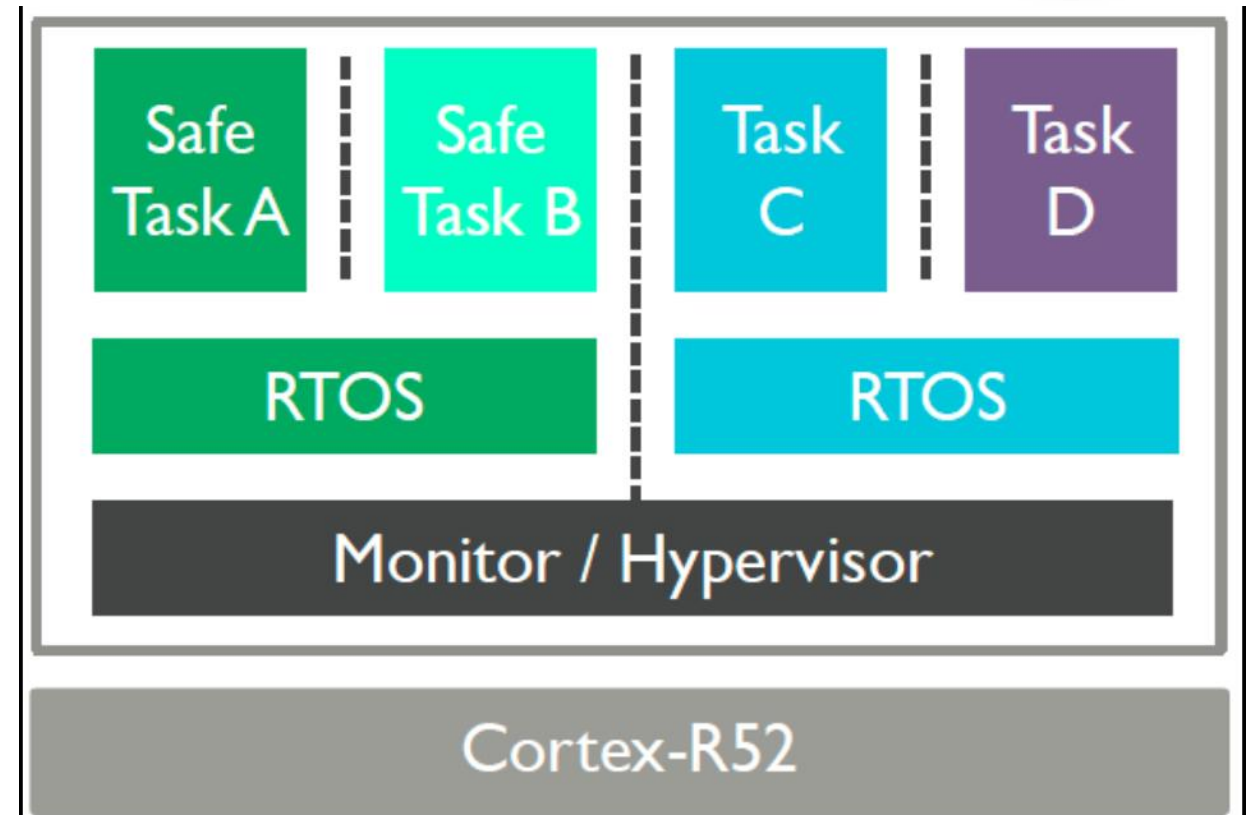

# Cortex-R52 simplifies real-time SW isolation

- ARMv8-R introduces new privilege level
- Create 'sandboxes' protected from other SW
- Monitor or Hypervisor manages software separation and simplifies isolation of tasks
- Real time switch rapidly between tasks and 'sandboxes'
- Simplified integration of complex SW from multiple sources

→ Optimized for TSP

Introduction  
Consortium

DAHLIA Key Features  
ARM Technology  
**Conclusion**

# DAHLIA Keypoints

Powerful combination of innovative technology adapted for Space

Optimized to support time and space partitioning for centralized avionics

Designed to face the new challenges of Space such as mega-constellations

# Conclusion

The DAHLIA H2020 project covers the development of a rad-hard high performance quad-core ARM R52 SoC in 28nm FDSOI technology, with eFPGA for flexibility and key IPs.

It will enable faster and cost-efficient development of products for multiple space applications.

Beyond Space applications, DAHLIA will enable the convergence with terrestrial applications benefiting from the strong ARM ecosystem.

DAHLIA brings to reality what was still a dream few years ago, addressing the new expectations and new mindset of Space industry.
