# IN FLIGHT OBSERVATION CASE 1: PICARD STAR TRACKER

## PICARD CNES Scientific satellite for sun observation

LEO (725km/98°), launched 06/15/2010

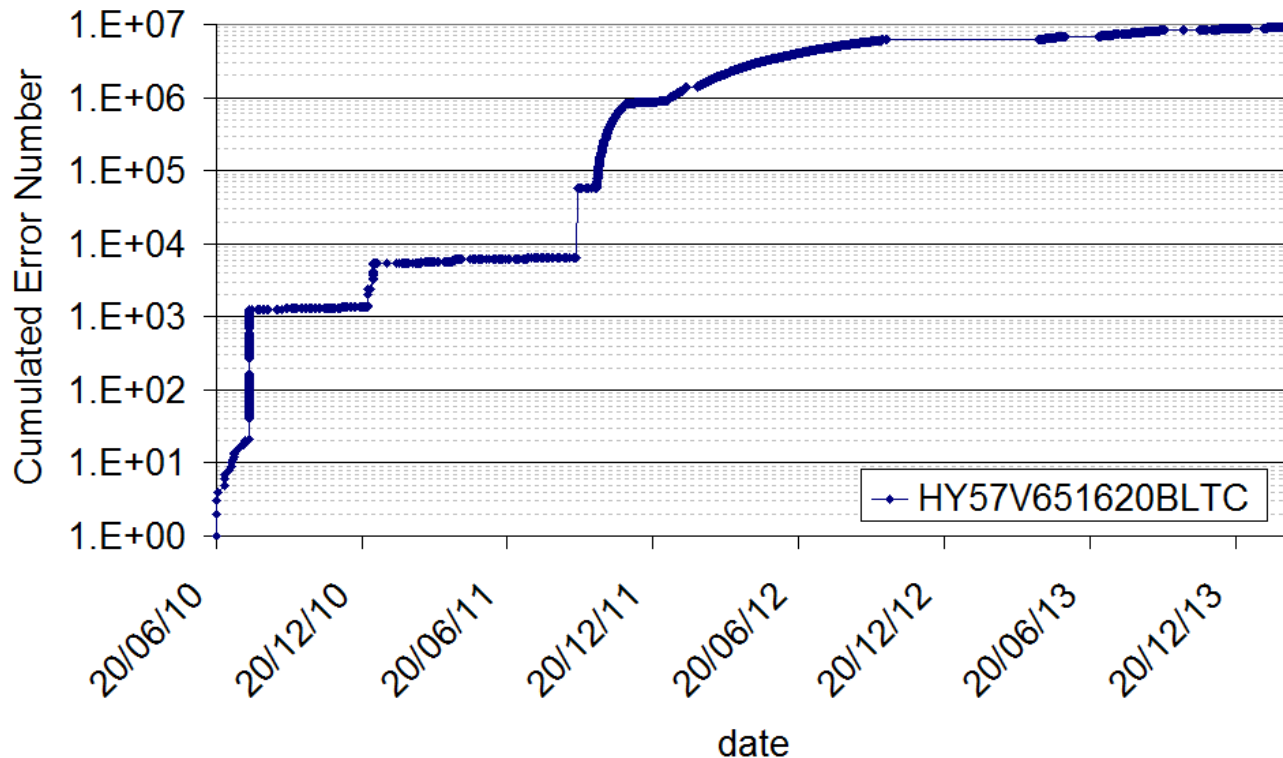

- Star tracker from DTU
  - ◆ COTS SDRAM: HY57V651620BLTC-10S, HYUNDAI
  - ◆ TID tested up to 30kRad (protons)
  - ◆ SEL free (protons)
  - ◆ SEU protected (EDAC + Scrubbing)
- This EDAC is able to:
  - ◆ Detect and correct single bit errors
  - ◆ Detect multiple bit errors
- EDAC activity is reported in TM (priority mode)

Date	Latitude	Longitude	@ hex	@ dec
2014/01/26 19:58:27.141	-14.831039	325.295582	B7E410	12051472
2014/01/26 19:58:31.141	-14.831039	325.295582	B7E410	12051472

# IN FLIGHT OBSERVATION CASE 1: PICARD STAR TRACKER

A few days after PICARD being set into an operational mode (725km, 98°), the EDAC exhibited a large number of errors.

EDAC errors compiled between 06/20/2010 & 10/09/2012 (PICARD anomaly) and between 04/17/2013 & 03/02/2014 (technological experiment)

# IN FLIGHT OBSERVATION CASE 1: PICARD STAR TRACKER

These errors can be split in 3 categories:

- SEU

- Burst (3)

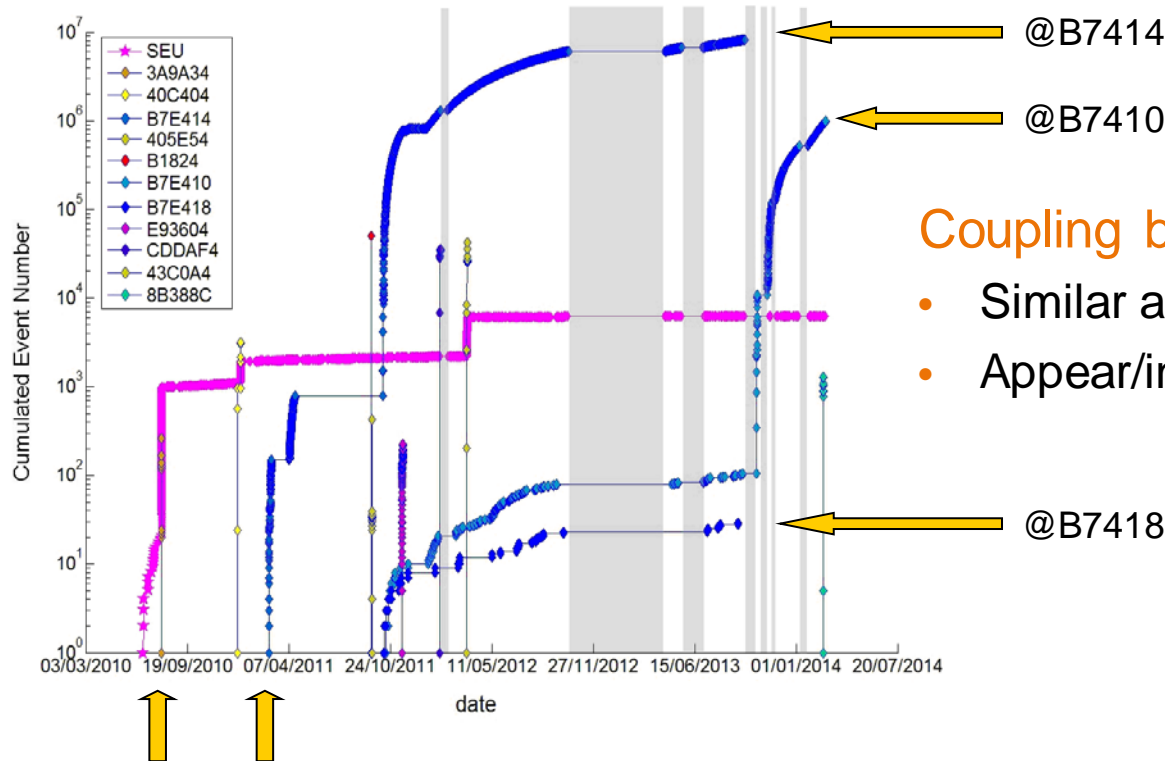

- Weakened cells (11 addresses)

- ◆ Same corrupted bit
- ◆ Not definitively stuck

# IN FLIGHT OBSERVATION CASE 1: PICARD STAR TRACKER

## Not a problem of cumulated dose:

- First occurrence only 2 weeks after launch (TID~100Rad)
- Worst case (@B7E414) after 1,8kRad(Si)

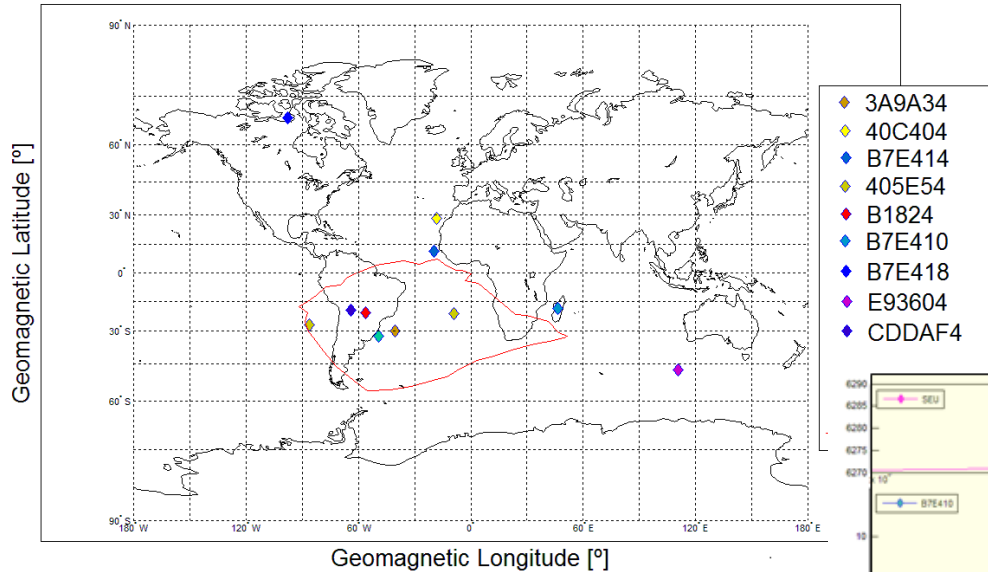

## Coupling between cells:

- Similar addresses
- Appear/increase simultaneously

# IN FLIGHT OBSERVATION CASE 1: PICARD STAR TRACKER

## Localization of first occurrence for each @

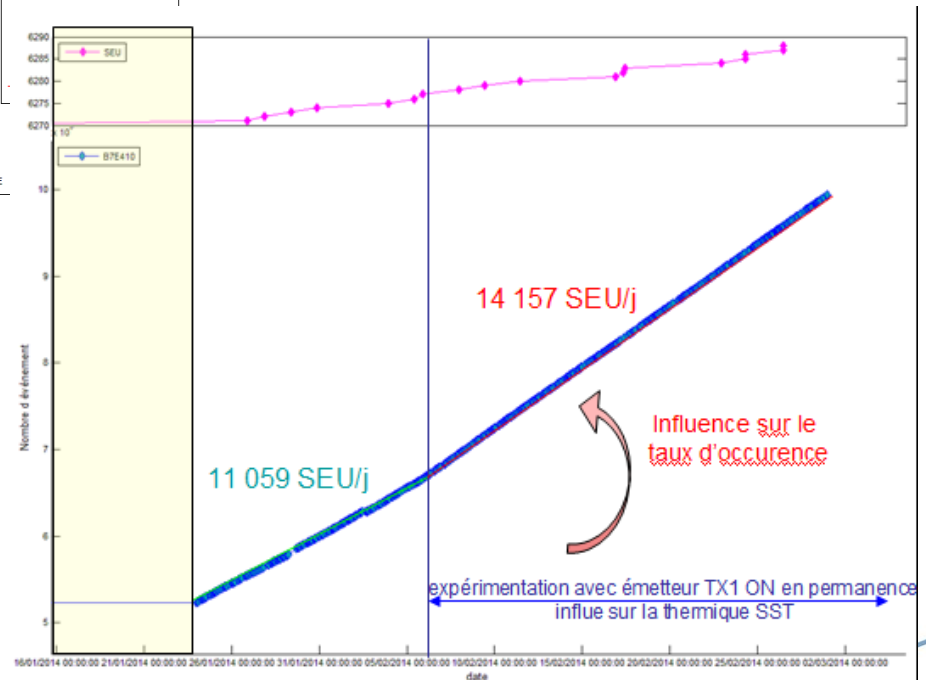

Most probably induced by protons

## Thermal effect:

When temperature increases,

- ISB rate increases
- SEU rate stays stable

# IN FLIGHT OBSERVATION CASE 2: CARMEN2/MEX ON JASON2

CARMEN2-MEX experiment on board of JASON2 satellite for the study of radiation effects on electronic components.

1336km/66°, launched 06/20/2008

- 2 3DPlus SDRAM modules (MMSD08512408S-Y)
- Each module made of 8 stacked Elpida EDS5104ABTA.

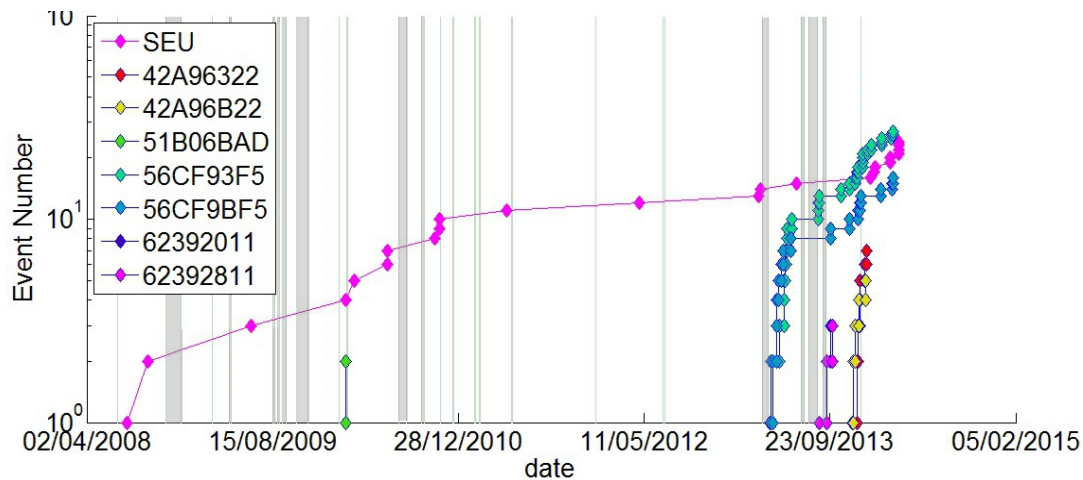

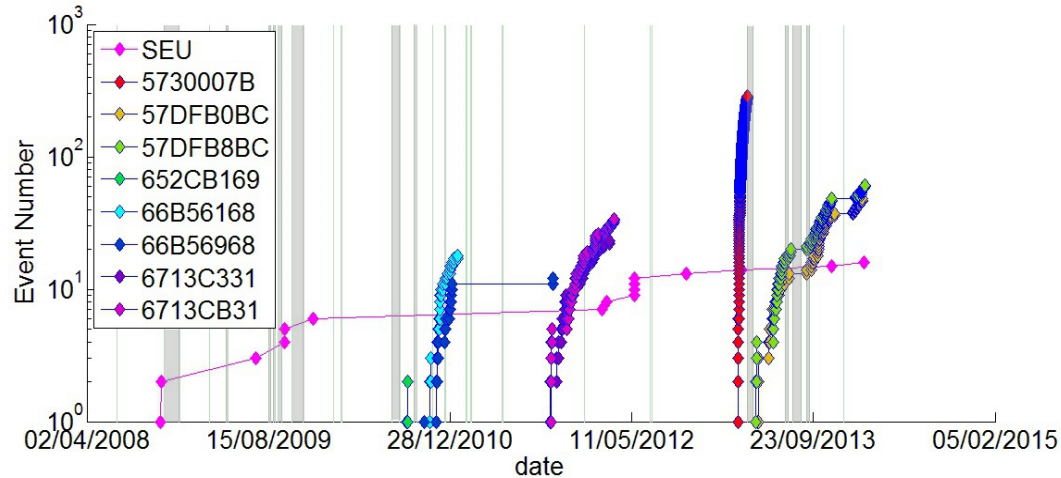

# IN FLIGHT OBSERVATION CASE 2: CARMEN2/MEX ON JASON2

The 2 modules exhibited weakened cells with similar behavior

# FOLLOWING INVESTIGATIONS

2011-2012

Inflight data analysis

2013-2014

Experimental evidence of  
Stuck bit on SRAMs

2014-2015

ISB on SDRAMs

2016-2017

What about DDR3/SDRAMs?

3 CNES R&D studies shared by TRAD & UM/RADIAC

1 Ministry funded PhD at RADIAC on this specific topic

# WHERE ARE WE NOW?

**Very good results and work still in progress.**

**Many thanks to:**

Nathalie CHATRY, Anne SAMARAS, Nicolas SUKHASEUM,  
Aymeric PRIVAT and Benjamin VANDEVELDE – TRAD

Axel RODRIGUEZ and Frédéric WROBEL – UM/RADIAC

Eric LORFEVRE and Robert ECOFFET - CNES
