

Introduction and Status of SAVOIR

On behalf of the SAVOIR Advisory Group
Kjeld Hjortnaes – ESTEC/TEC-SW
Head of Software Systems Division

SAVOIR.

SAVOIR means *Space Avionics Open Interface aRchitecture*.

It is an initiative to federate the space avionics community and to work together in order to improve the way that the European Space community builds avionics subsystems.

SAVOIR is coordinated by the Savoir Advisory Group including representative of ESA, CNES, DLR, Astrium, Thales, OHB, RUAG, Selex Galileo, Terma.

What is it all about.

- Improve the way we deliver space systems.
- Support industrial competitiveness.
- Enhance product orientation.

Product orientation

Improve the way we deliver Space Systems (cost & schedule) by

- Pre-developed Products / Building Blocks based on
- well defined Specification & Interfaces based on
- an agreed Reference Architecture

SAVOIR objectives

- to reduce the **schedule** and **risk** and thus cost of the avionics procurement and development, while preparing for the future,
- to improve **competitiveness** of avionics suppliers,
- to influence **standardization** processes by standardizing at the right level in order to get equipment interchangeability (the topology remains specific to a project).
- to define the **governance** model to be used for the products, generic specifications, interface definition of the elements being produced under the SAVOIR initiative.

The process is intended to be applied as part of the Agencies ITTs, and throughout the subsequent procurements and development process. A particular goal is to have SAVOIR outputs exploited in future projects and relevant products as part of European supplier's portfolios.

SAVOIR Output

The primary outputs of Savoir are:

- **reference avionics architecture** for spacecraft platform hardware and software,
- a set of avionics external and internal **interface specifications**,
- the definition of **building blocks** composing the architecture,
- the **functional specification** of selected building blocks comprising the architecture,
- Demonstrate **maturity** of the functional & Interface specification by performing prototyping activities
- Facilitating the implementation of selected **building blocks**.

SAVOIR expected benefits

SAVOIR supports:

- space avionics **customers** and **system architects**,
- **system integrators**,
- avionics and technology **suppliers**,
- standardization bodies.

It is a tool for the industrial policy and R&D planning makers.

The expected benefits of SAVOIR are:

- for **customers**, streamline the procurement process of spacecraft avionics,
- for **system integrators**, facilitate the procurement and integration of the spacecraft avionics,
- for **suppliers**, prepare the technical conditions for an efficient product line organization.

Functional
Interface

SAVOIR perimeter

- SAVOIR focus on the Platform Avionics including Payload Interfacing
- Build on the pillars
 - Data Handling Hardware
 - Control Sensors & Actuators
 - On-board Communication
 - Flight Software
- Related topics
 - The operations view
 - Development and Verification Process.
 - Model Based Development
 - Functional Verification strategy.
 - Links the system data repository.

The SAVOIR wheel

Domain of reuse

Agree on which functions compose the perimeter of avionics and how to allocate them to BB if needed.

System Reference Architecture
1

Define Interface (IRD)

Building Blocks Selection
2

Refine Interface (ICD)

Domain design

Agree on the most important BB to standardize and develop. Propose a roadmap to implement them.

SAVOIR is an initiative to federate the space avionics community to work together in order to:

- Improve the way to deliver space programs.
- Set a « product philosophy » approach.
- Deliver elements usable by the customers, the system integrators and the suppliers.

Key Performance Indicators

Measure the effectiveness of SAVOIR recommendations and approach, in terms of costs and effectiveness.

Product Use Assessment
4

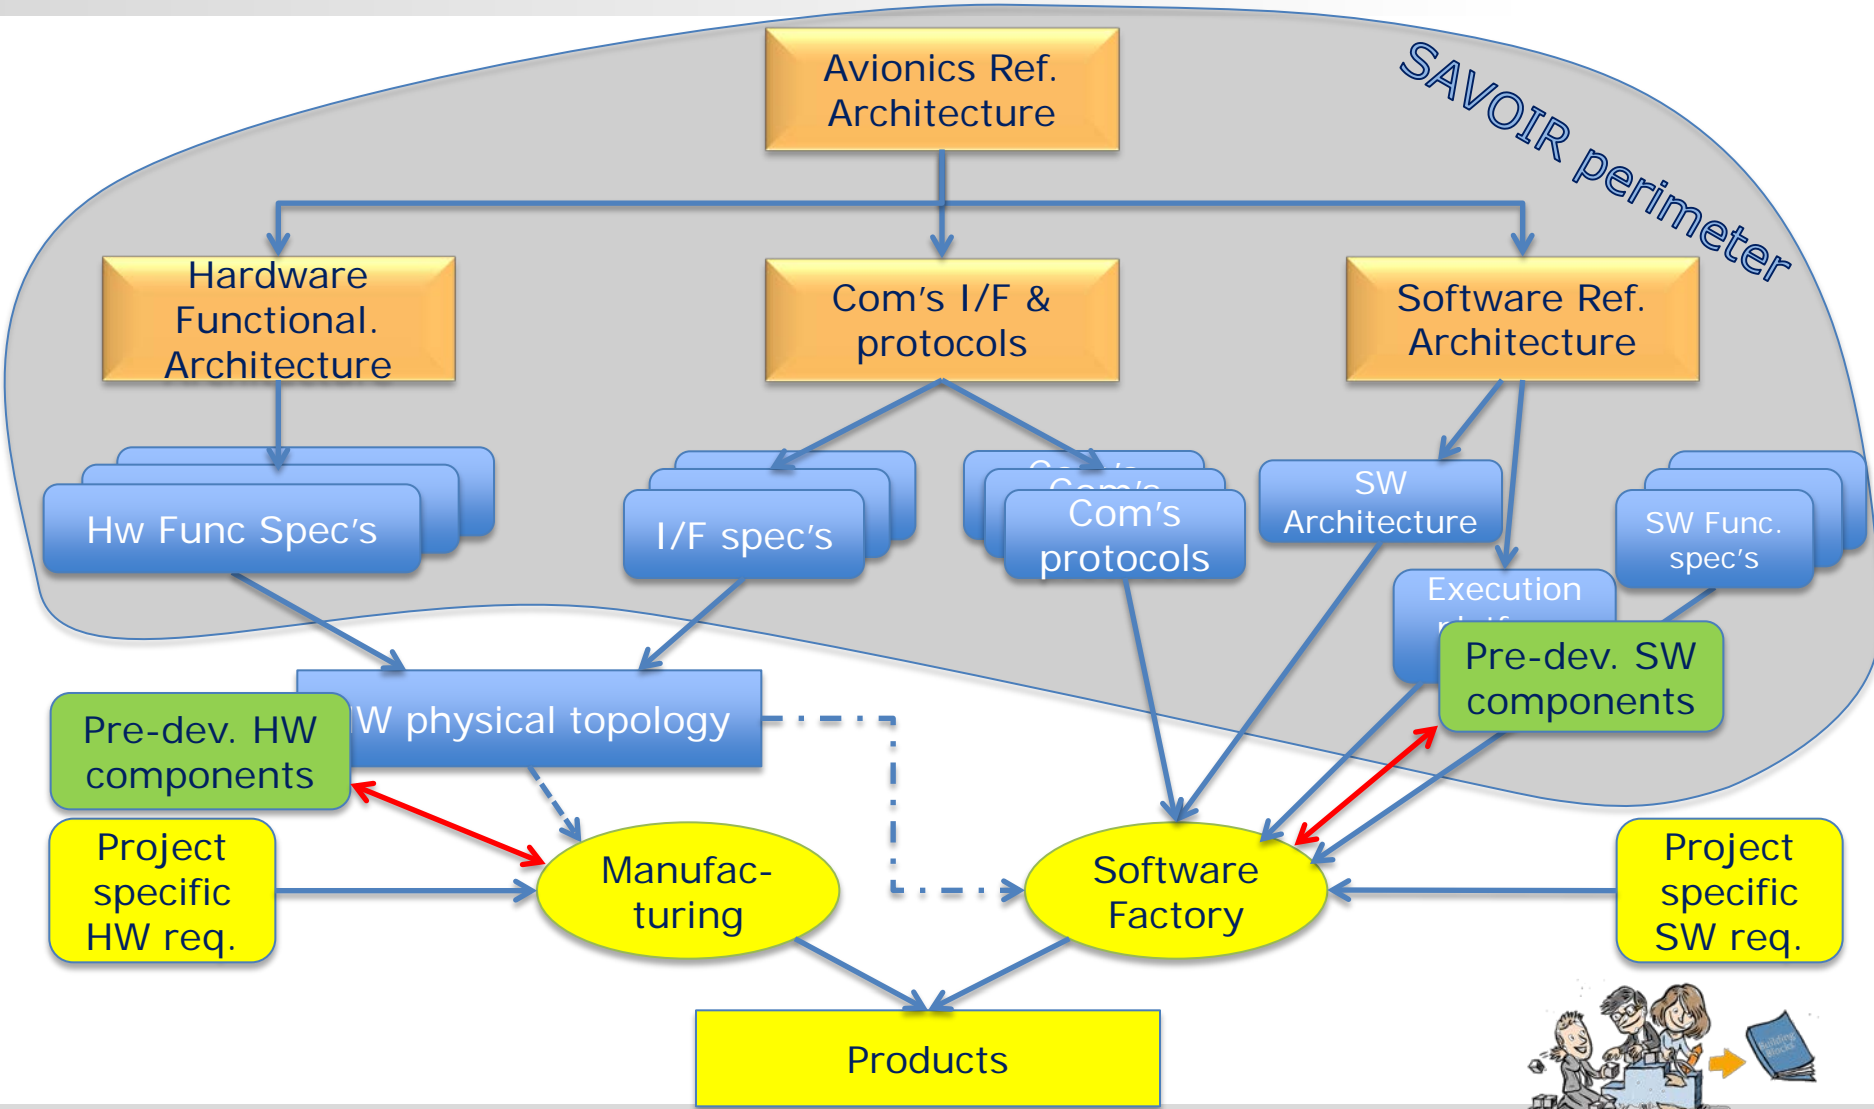

Generic Functional Specification
3

Reusable spec & I/F standards

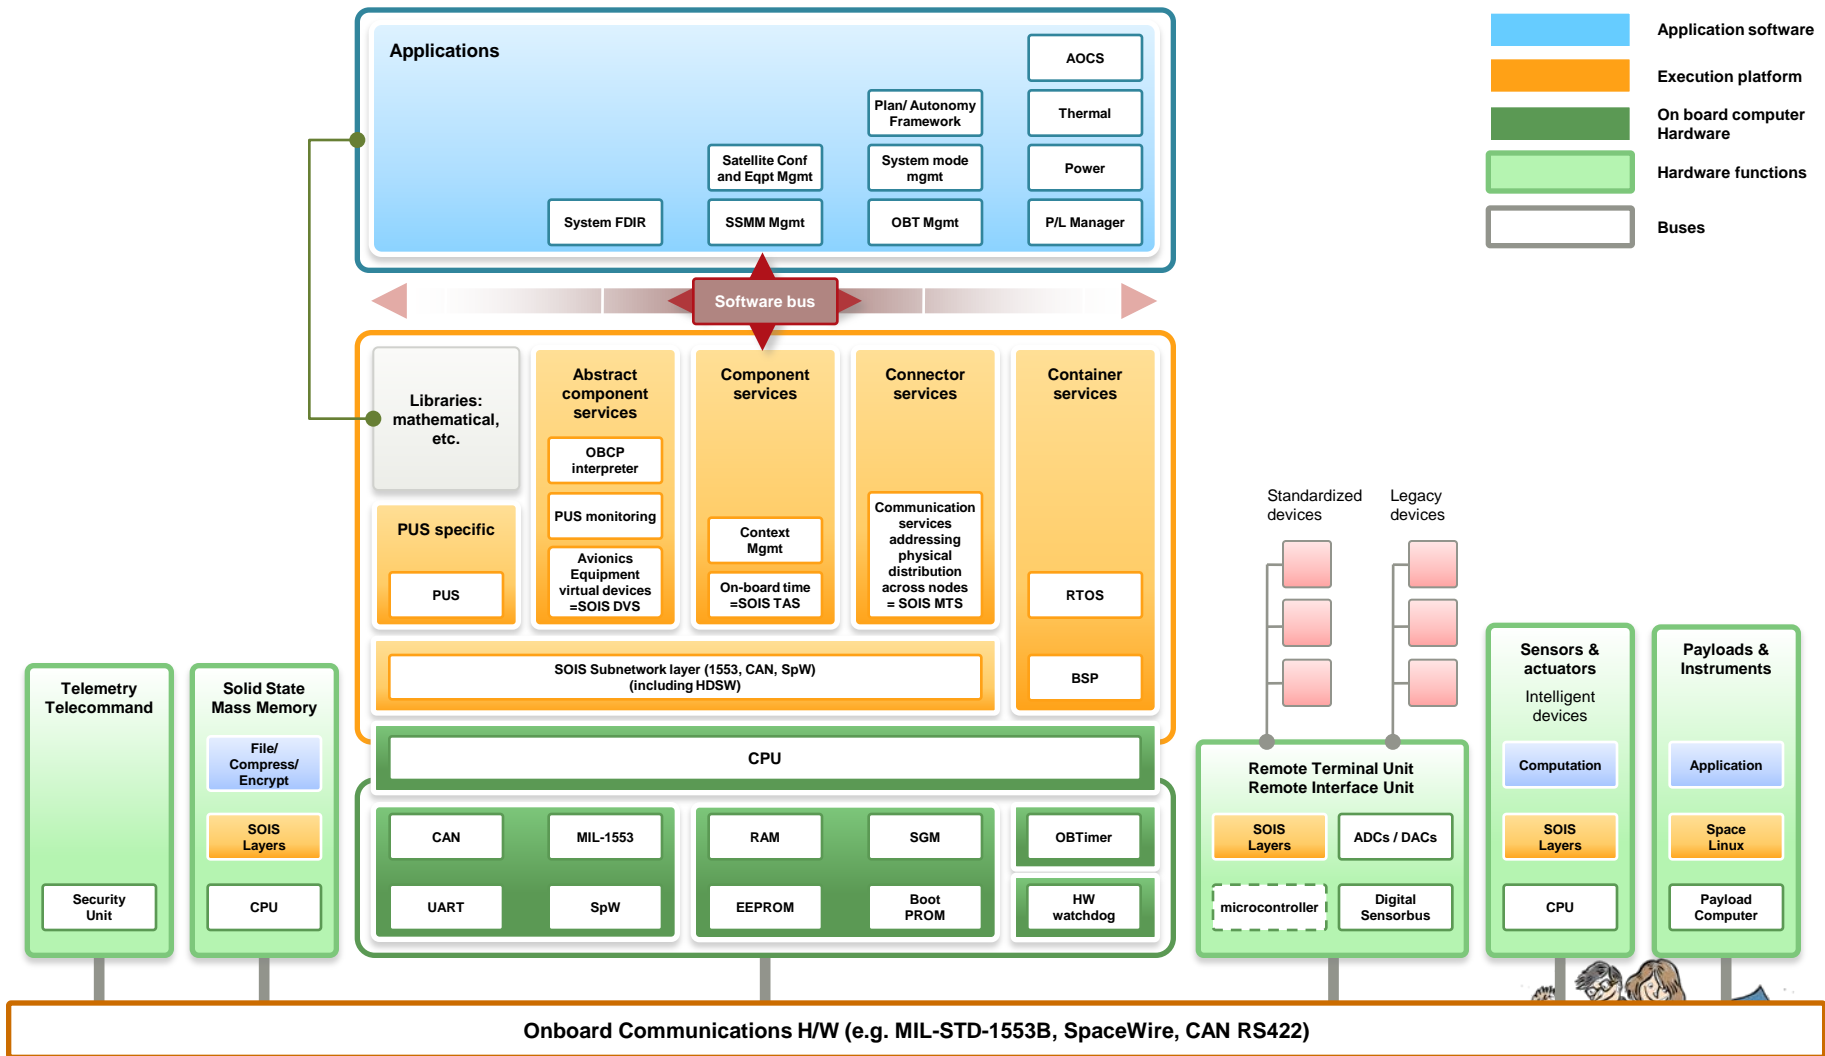

Agree on variability and modularity of the specifications for the selected BB or for groups of BB.

SAVOIR HW Reference Architecture Functional View.

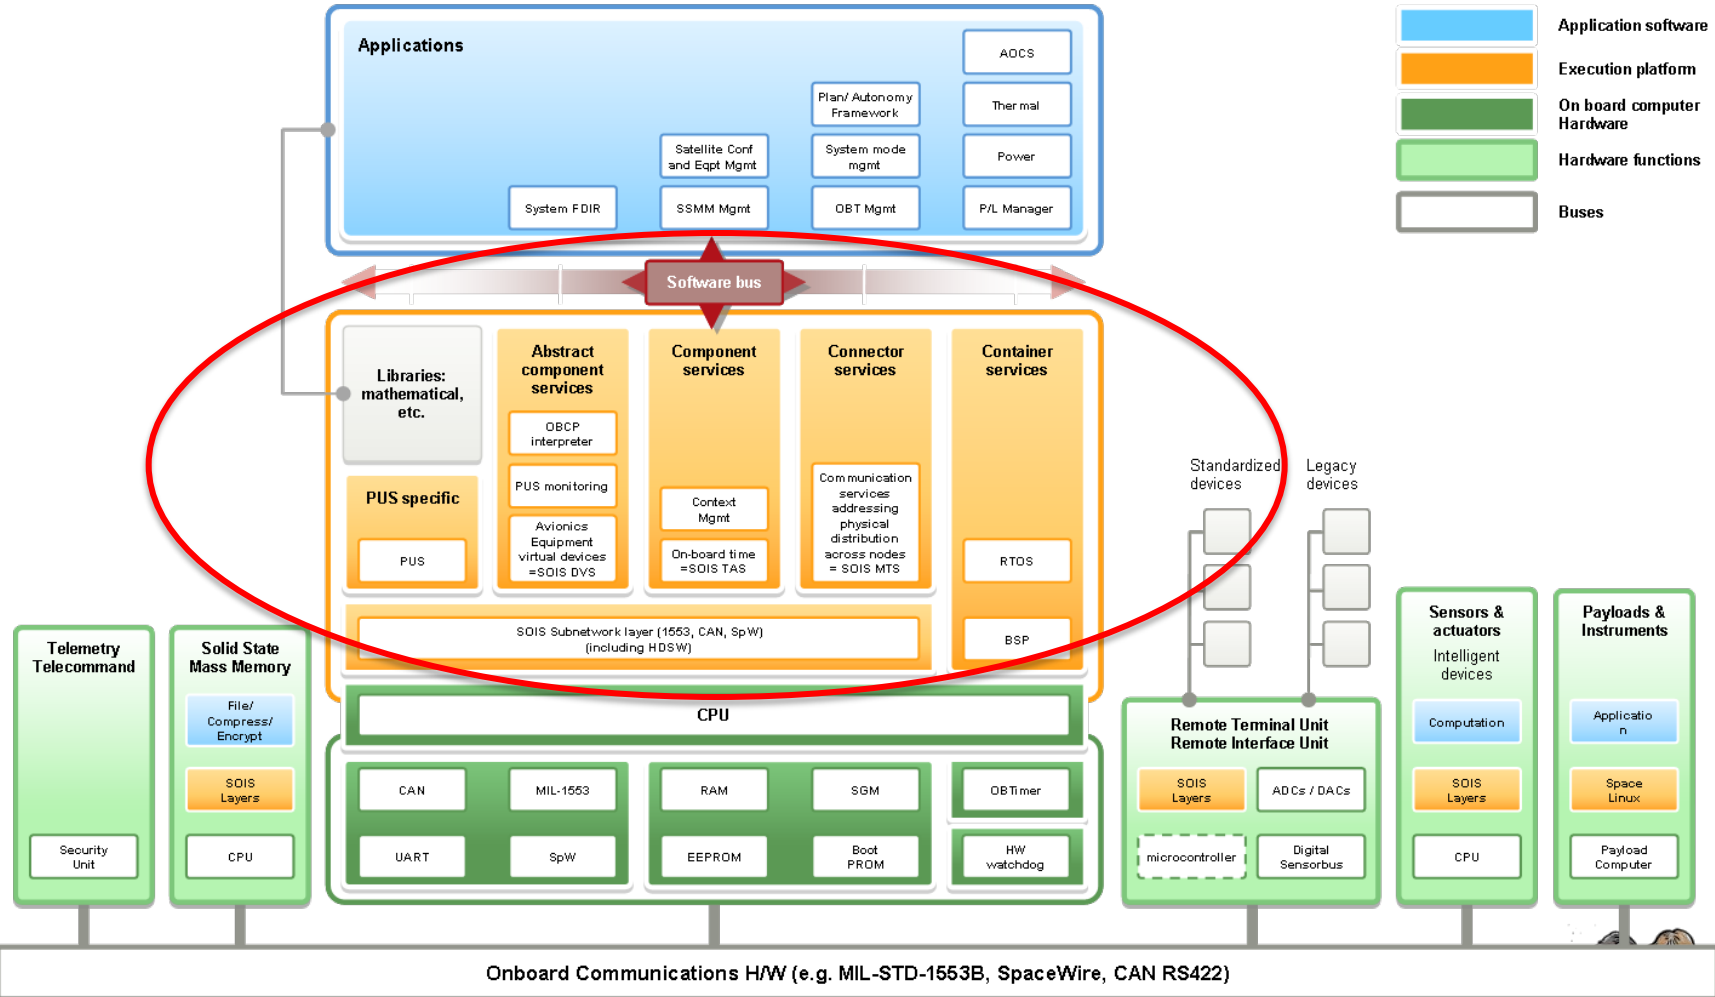

Communication Network & Protocols

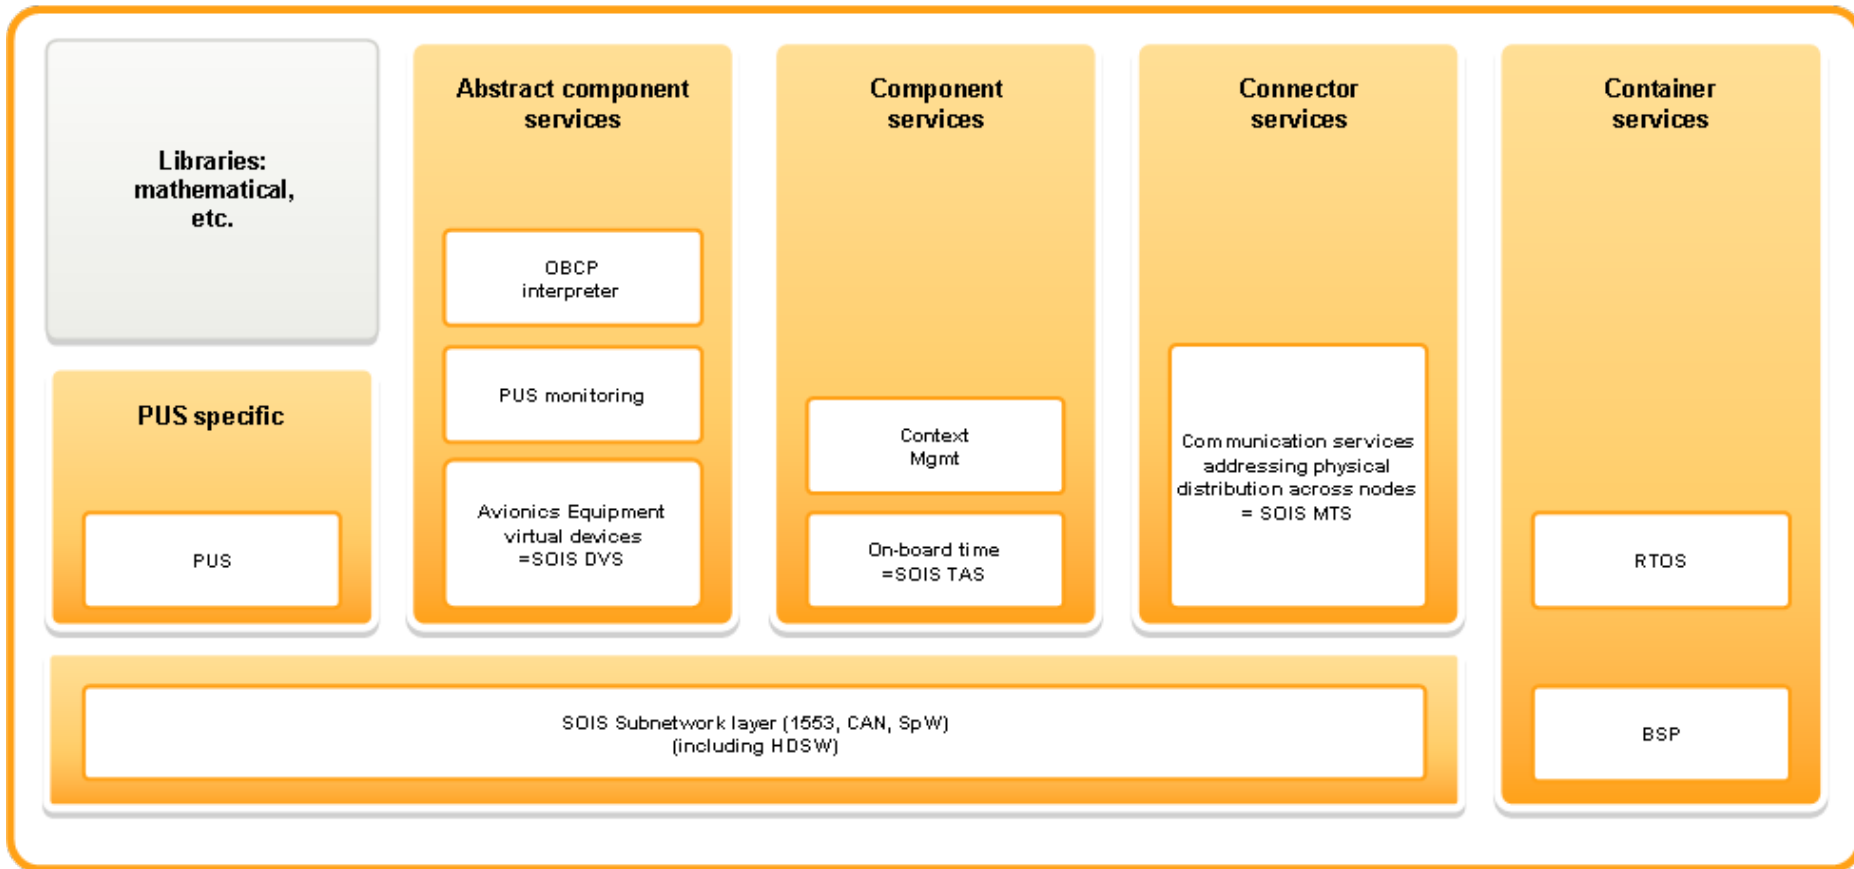

OSI MODEL		UPPER LAYERS
7	 Application Layer Type of communication: E-mail, file transfer, client/server.	
6	 Presentation Layer Encryption, data conversion: ASCII to EBCDIC, BCD to binary, etc.	
5	 Session Layer Starts, stops session. Maintains order.	
4	 Transport Layer Ensures delivery of entire file or message.	
3	 Network Layer Routes data to different LANs and WANs based on network address.	
2	 Data Link (MAC) Layer Transmits packets from node to node based on station address.	
1	 Physical Layer Electrical signals and cabling.	LOWER LAYERS

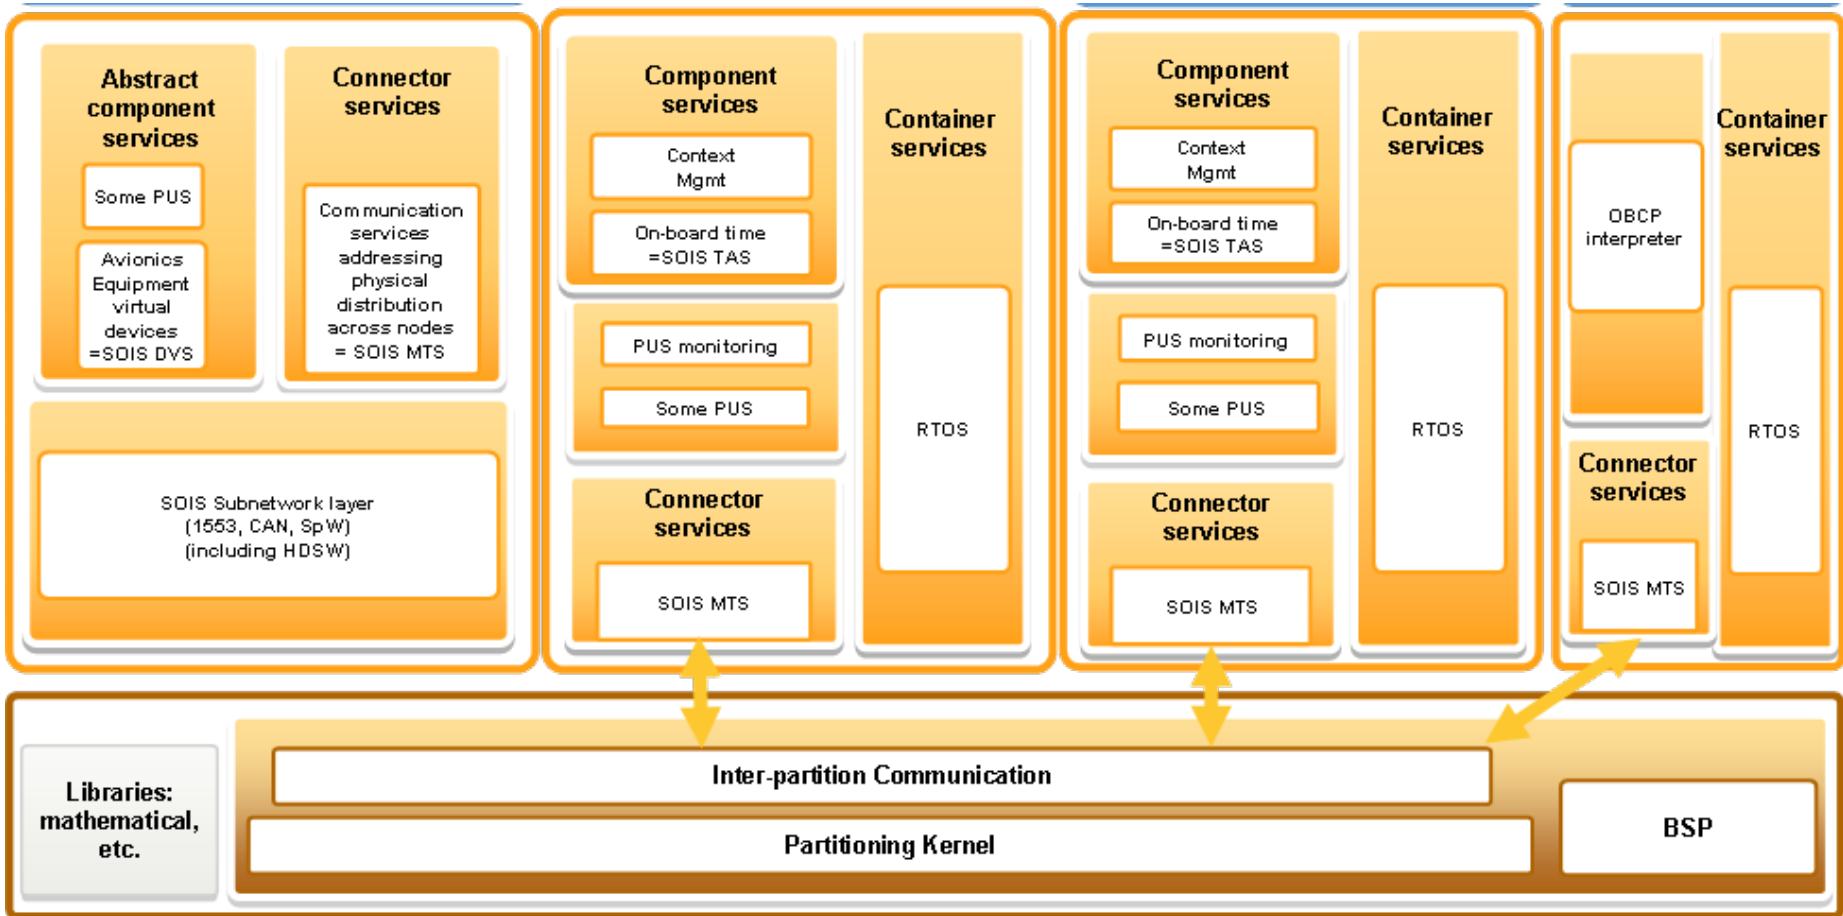

Software Reference Architecture

Software Reference Architecture Execution platform – ‘Classic’

Software Reference Architecture Execution Platform – ‘Time & Space Partitioning’

SAVOIR process

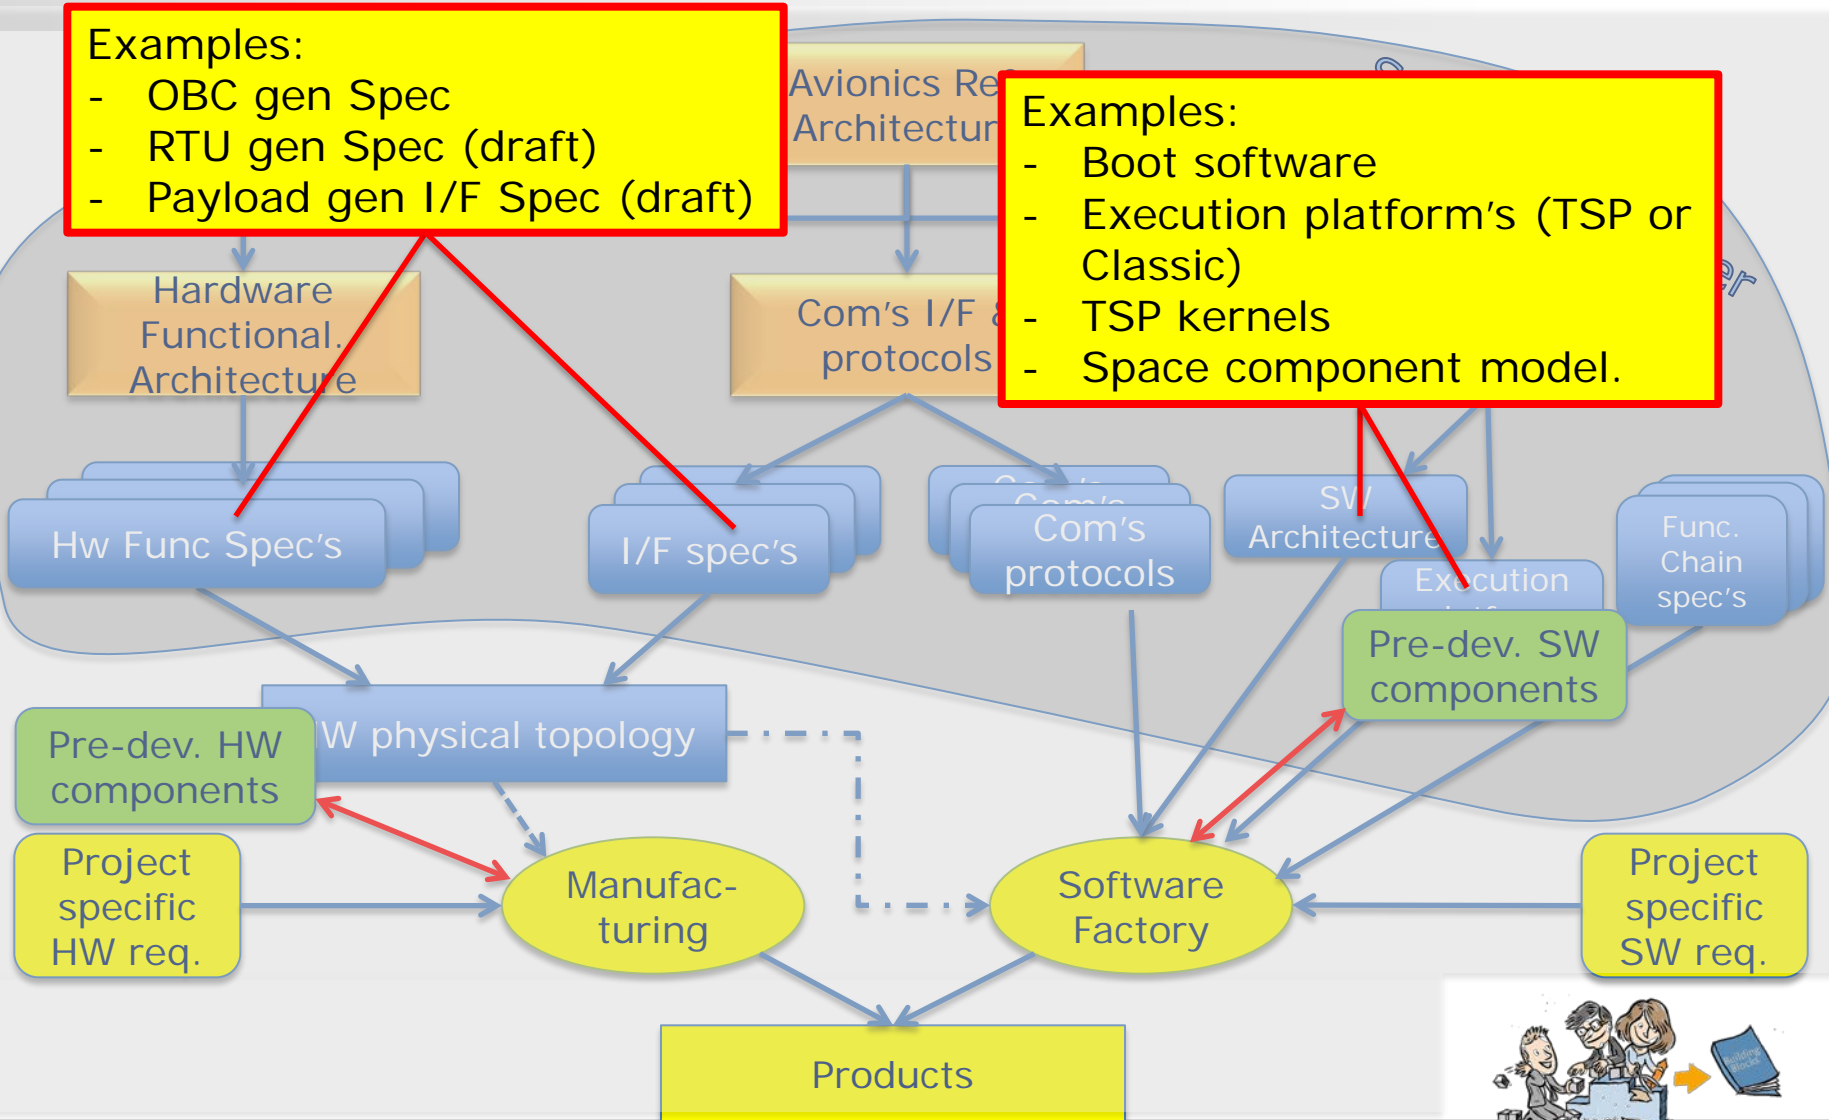

Examples:

- OBC gen Spec
- RTU gen Spec (draft)
- Payload gen I/F Spec (draft)

Examples:

- Boot software
- Execution platform's (TSP or Classic)
- TSP kernels
- Space component model.

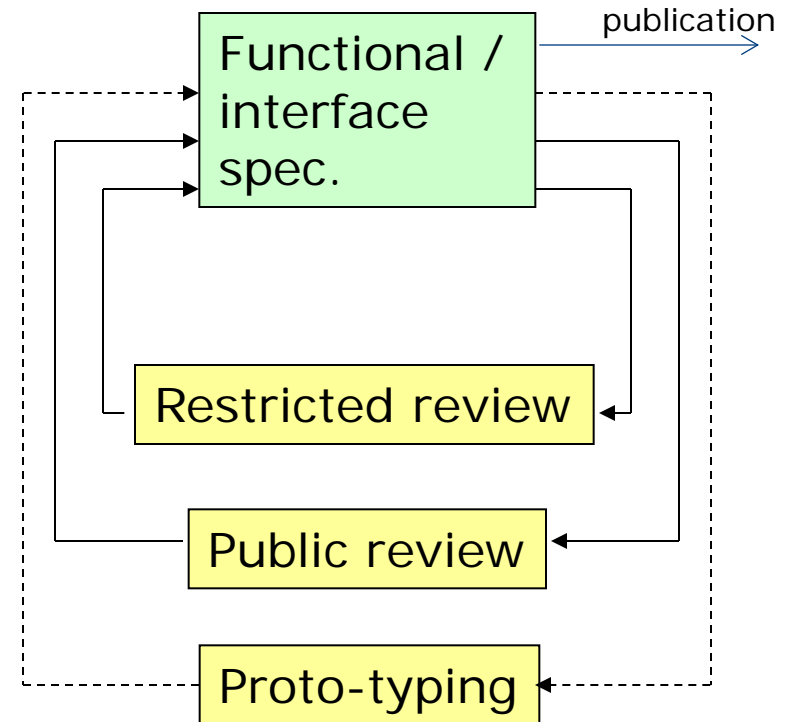

Specification production scheme.

Under SAG agreement;

1. A draft version is produced;
 - By a SAG working group
 - Output of an R&D activity
 - Proposed by Industry
 - ESA internal
2. Submitted for **restricted review** and updated as needed
 - Check compliance to SAVOIR architecture and principle
 - Completeness / consistency / etc
3. Submitted for **public review** and updated (same objective as 2)
4. Verified by **prototyping** – to demonstrate maturity of the spec., consistency with the ref architecture (as far as possible on a case by case basis)
5. **Publication**

Public review of SAVOIR spec.

- Public review of SAVOIR documents will be restricted member states only.
- Objectives will be to verify
 - Completeness, consistency, coherence
 - Reusability, domain of reuse
 - Compliance to SAVOIR reference architecture
 - Dissemination aspects
(e.g. proprietary information, IPR infringements)
- Discussion with ECSS TA on-going
 - The role of the Savoir within ECSS still to be agreed
