# MARVL CIP

## TEC-SW FINAL PRESENTATION

Speaker:

Merlin Bieze – MARVL Technical Lead  
[m.bieze@rheagroup.com](mailto:m.bieze@rheagroup.com)

Technical Officer: Joachim Fuchs

May 9<sup>th</sup> 2018

**CIP**  
Common Information Platform

---

# OVERVIEW

Introduction

ESA Need

Project Objectives

MARVL Context

CIP Architecture

CIP Demonstration

Conclusion

Q&A

---

## INTRODUCTION

- ESA TRP Activity
- **MARVL - Model bAsed Requirements Verification Lifecycle**
- Exchange of “structured” Engineering data/information Between stakeholders (customer & supplier)
- **Common Information Platform (CIP)** developed in support of MARVL requirements

---

## MARVL CONSORTIUM

: Prime

- ✓ Meta model design of the FDM (Functional Data Model)
- ✓ Public REST API (including data store persistence)
- ✓ Web UI client

- ✓ Meta model design of the CDM (Common Data Model)
- ✓ Use case definition
- ✓ Demonstration data preparation

---

## MARVL CONSORTIUM

- ✓ MARVL RCP, desktop client

- ✓ Process gap analysis
- ✓ Recommendations

---

## INTRODUCTION

- ↘ Many (MBSE) tools used by industry to create digital models.
- ↘ Exchange with agency is often document centric.
- ↘ Conversions of model data to documents and vice versa has the following down sides:
  - ↘ Same information is repeated in different documents,
  - ↘ Inconsistencies due to lack of configuration control ,
  - ↘ Difficult to navigate between documents,
  - ↘ Tracking of evolution, changes, and overall status is difficult

---

# EUROPEAN SPACE AGENCY NEED

---

## EUROPEAN SPACE AGENCY NEED

- ↘ A platform that facilitates model-based information exchange through the project life-cycles between:
  - ↘ interdisciplinary / multifunctional information exchange
  - ↘ multiple stakeholders (e.g. ESA, Airbus)
- ↘ A platform that supports traceability through the project lifecycle
- ↘ Support technical oversight and formal review process

---

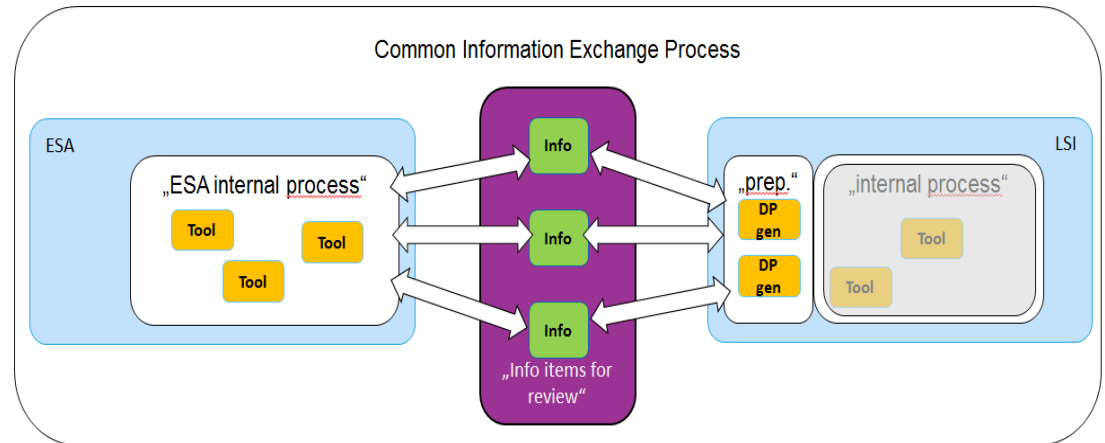

# MARVL - CONTEXT

MARVL aims to develop a methodology to improve the processes and the related information exchange between the Customer (the Agency) and the Supplier (i.e. Large System Integrators (LSI)) across the full lifecycle

## MARVL - CONTEXT

### Process analysis

- From document based to model and information based;
- Support the structured sharing and exchange of data;
- Define a process to exchange this data;
- Define a properly supported process to perform reviews and early verification of requirements.

---

## MARVL - CONTEXT

### Approach

- ✓ Analyse the requirements of ESA and the LSI to support the effective exchange of requirements, verification information and engineering data across the full-lifecycle of the mission.
- ✓ Develop a model of the process and information exchange.
- ✓ Define a **Common Information Platform (CIP)** to support the exchange of data and information between the different actors.
- ✓ Develop a demonstrator of the CIP using an example mission and three engineering domains.
- ✓ Elaborate a roadmap for the introduction and deployment of the methodology and CIP within the European space industry.

---

## MARVL - CONTEXT

### Approach

- ✓ Model Driven Architecture using consortium tooling:
  - ✓ ScopeSET DME - Data Model Editor for model design
  - ✓ RHEA  CDP4 used for collaborative requirements definition  
available as oss: <https://github.com/RHEAGROUP/CDP4-WebServices-Community-Edition>
  - ✓ C# Ecore parser:  **ecorenetto**  
available as oss: <https://ecorenetto.org/>
  - ✓ C# ReqIF parser:  **ReqIF#**  
available as oss: <https://reqifsharp.org/>

---

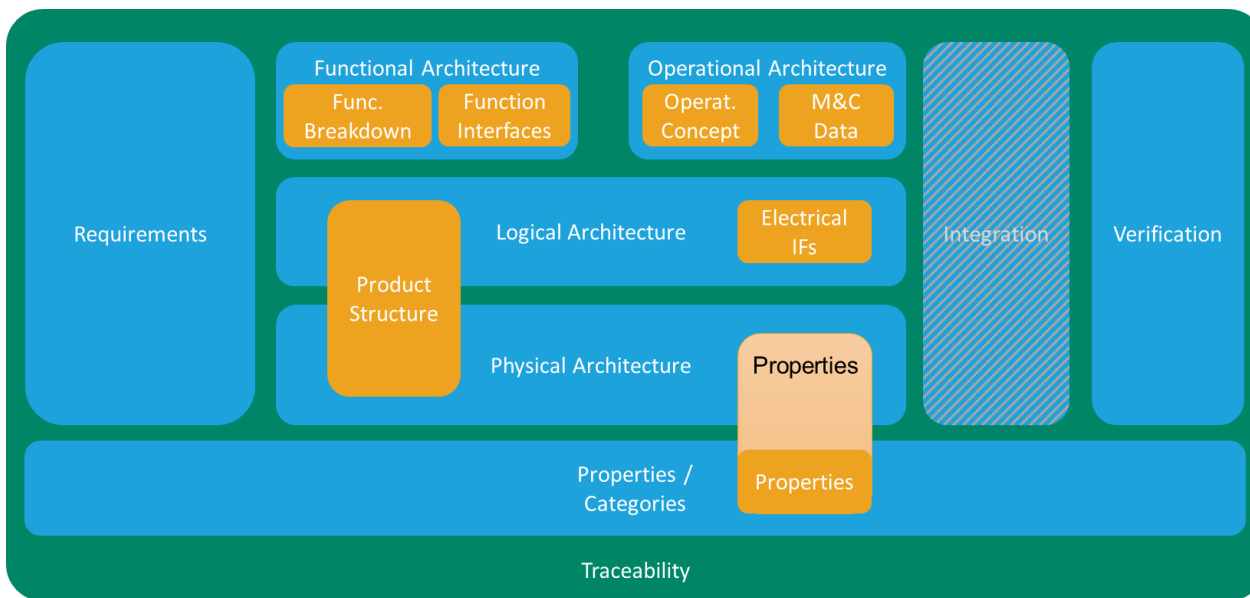

## MARVL - CONTEXT

### Approach

- ✓ Model Driven Architecture used to auto generate:
  - ✓ C# .NET Core libraries
  - ✓ Typescript libraries
  - ✓ Java libraries
  - ✓ REST API endpoints
  - ✓ SQL (PostgreSQL)
  - ✓ Cypher (Neo4J)

## KEY ENGINEERING CONCEPTS

- Navigation, Inspection and Annotation (review) of Engineering Data coming from deliverables in a model-based fashion

---

## MARVL - CONTEXT

### CDM Design

The MARVL Common Data Model is based on multiple available models to provide coverage of identified engineering concepts:

- ✓ EGS-CC (European Ground Systems Common Core)
- ✓ VSEE (Virtual Spacecraft Engineering Environment)
- ✓ ECSS E-TM-10-25A

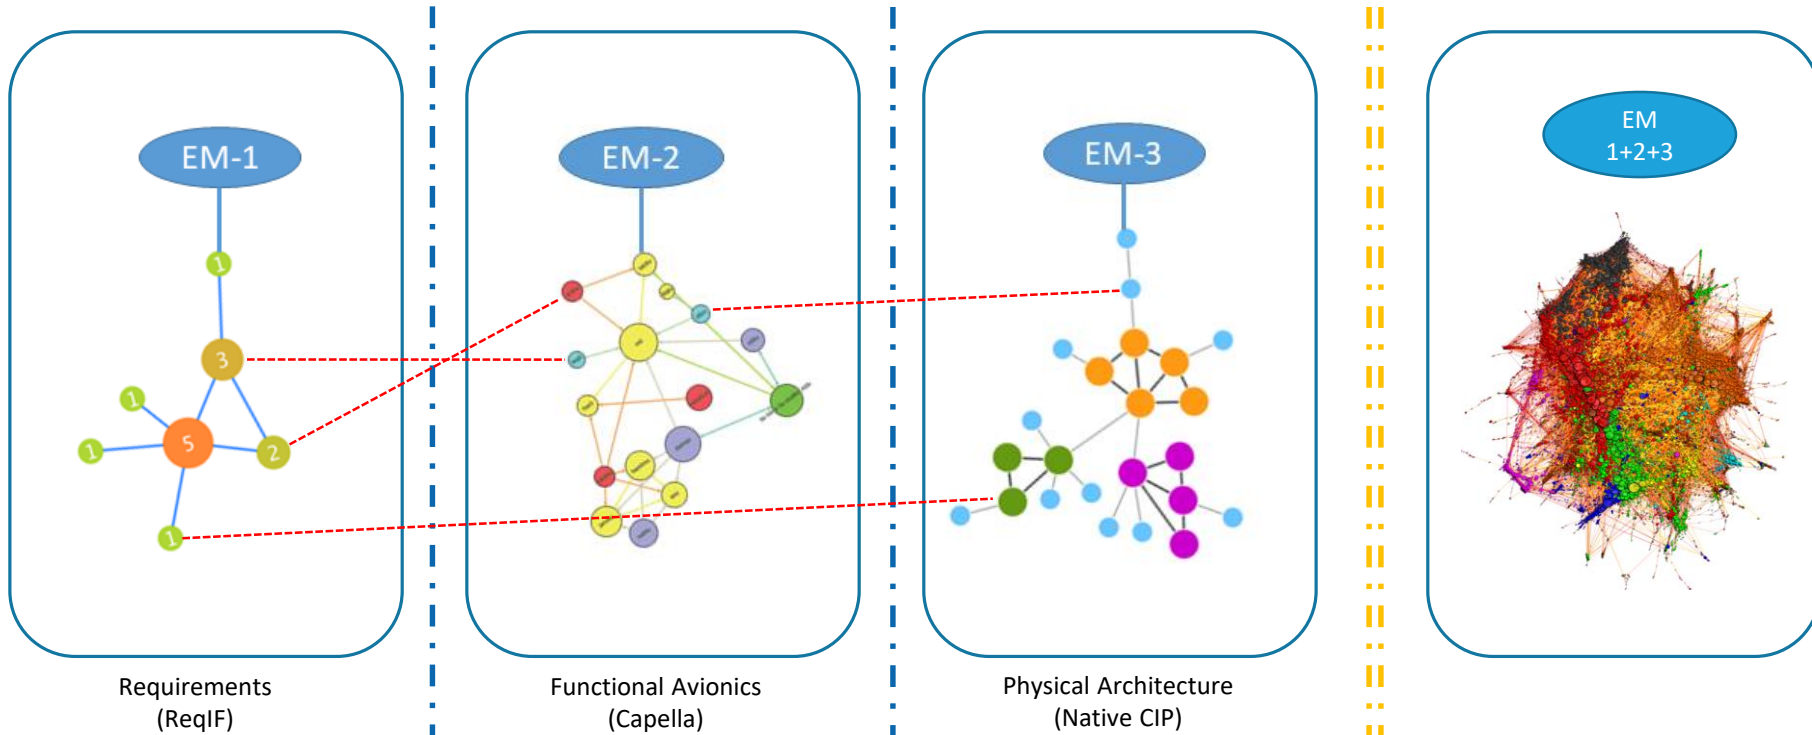

---

## MARVL - CONTEXT

- ✓ Model Based compared to Document Based
  - ✓ Document delivery is still supported
- ✓ Combine the data authored in multiple tools into one logical “model”:
- ✓ supported by conversion plugin architecture:
  - ✓ ReqIF
  - ✓ Capella
  - ✓ CIP Native format
- ✓ Use the “logical” model to navigate the relationships between Engineering Data to support verification activities during Reviews as well as Technical Oversight

## MARVL – MERGED MODEL INSPECTION

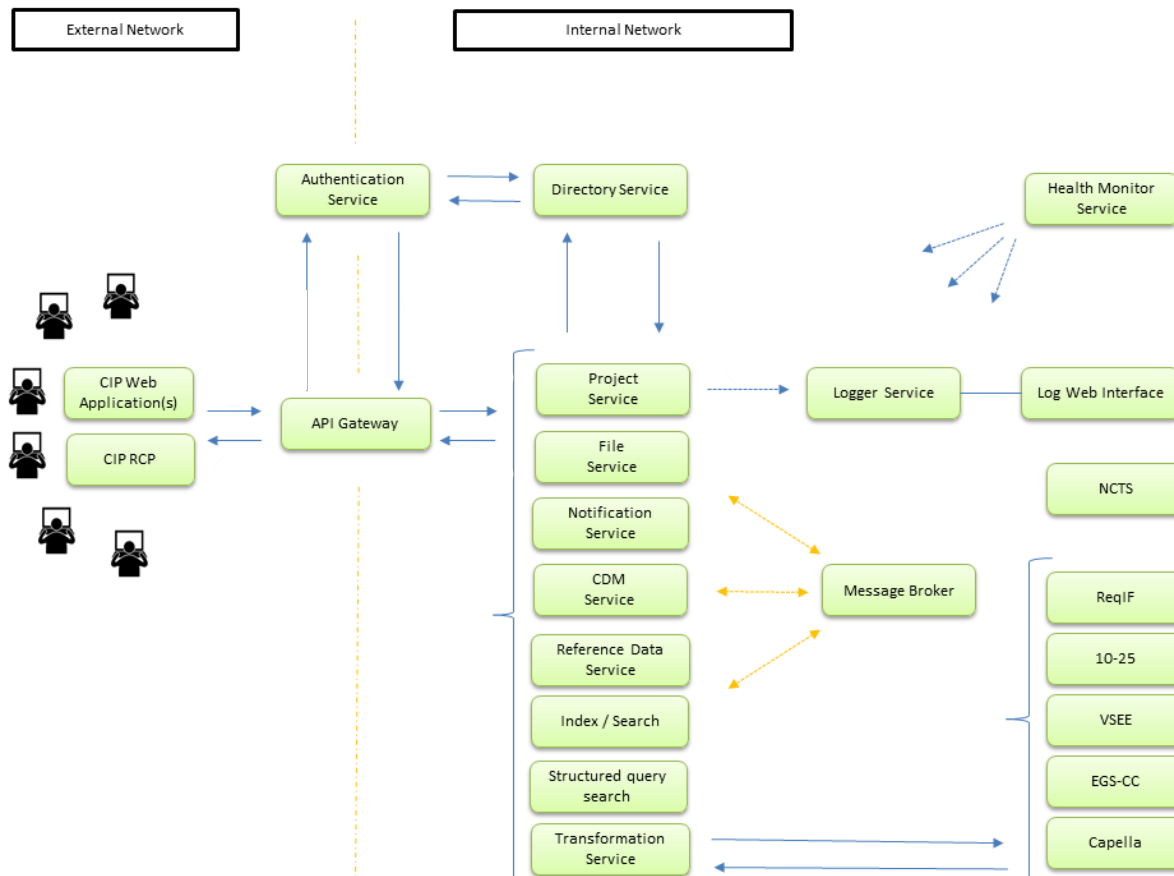

---

# CIP ARCHITECTURE

# CIP ARCHITECTURE

---

## CIP ARCHITECTURE

- ✓ The majority of the microservices are based on Microsoft .NET Core using OWIN Middleware pipelines such as NancyFx.
- ✓ Inter microservice communication based on Message Queues.
- ✓ Authentication based on IdentityServer4 based on OpenID Connect and OAuth 2.0.
- ✓ Authorization based on RBAC (configurable roles and permissions).
- ✓ The CIP is Deployed using Docker and Kubernetes.

---

## CIP CLIENT TIER

CIP web client technology

- ✓ Angular 4
- ✓ HTML 5
- ✓ Bootstrap
- ✓ Webpack
- ✓ NPM

---

## CIP FRONT TIER

The front tier provides TLS termination and reverse proxy

↪ Nginx

 **NGINX**

**https://**

---

## CIP MID TIER

The mid tier is deployed as a microservice architecture

- Microsoft .NET Core 2.0
- Java 8
- NancyFx REST
- Identity server 4
- RabbitMQ
- Nunit

---

## CIP BACK TIER

Multiple data stores used according to particular need

✓ PostgreSQL

✓ SQLite

✓ ElasticSearch

✓ Neo4J CE

---

## TOOLING

- Visual Studio 2017
- Phabricator project management
- GIT
- Jenkins
- SonarQube
- Nexus
- NuGet
- Docker / Kubernetes

PHABRICATOR

Visual Studio

docker

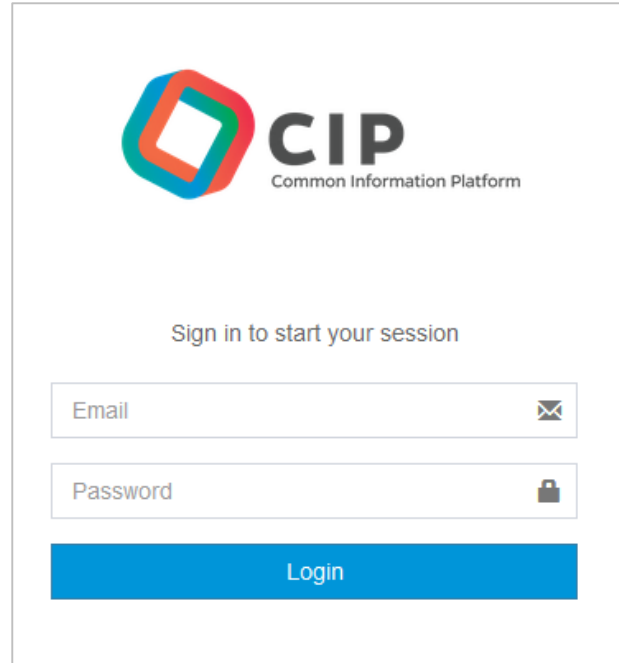

kubernetes

---

# CIP DEMONSTRATION

---

## CIP DEMONSTRATION

The image shows a login interface for the CIP (Common Information Platform). At the top center is the CIP logo, which consists of a stylized square with rounded corners, colored in red, green, and blue, followed by the text "CIP" in a large, bold, black font and "Common Information Platform" in a smaller, black font below it. Below the logo, the text "Sign in to start your session" is centered. Underneath this text are two input fields: the first is labeled "Email" and has an envelope icon on the right; the second is labeled "Password" and has a lock icon on the right. At the bottom of the form is a prominent blue button with the text "Login" in white.

---

# CONCLUSION

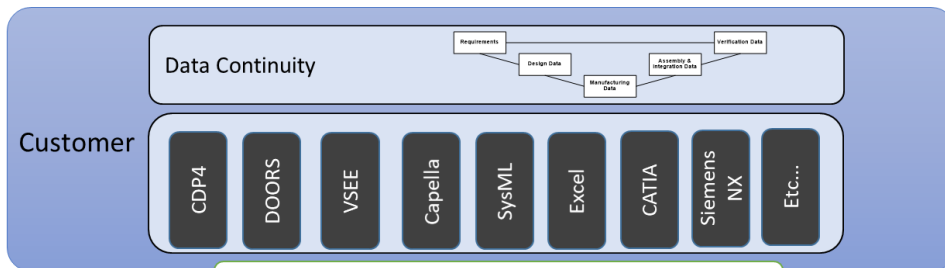

---

## CONCLUSIONS

The MARVL project has resulted in the delivery of the **Common Information Platform** which:

- ✓ facilitates an interdisciplinary / multifunctional information exchange between the multiple stakeholders
- ✓ facilitates model traceability through the model lifecycle
- ✓ facilitates ESA's model review process
