Microchip ADG France

Aerospace and Defense Product Line

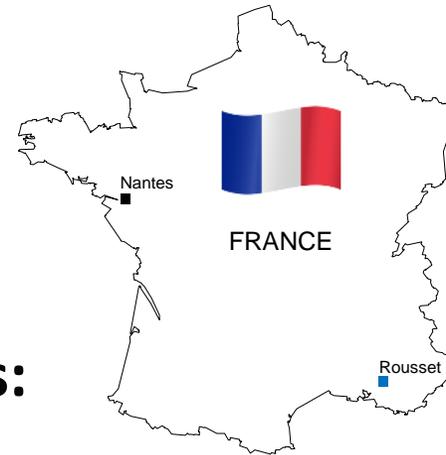

- **Committed to High Reliability and Long-Term Supply**
 - Delivering aerospace ICs for more than 30 years
 - Strong flight heritage in space and avionics applications
 - Leverage from automotive solutions for “new space” challenges: volume, cost and time to market
- **Major Product Focus**
 - **ASICs**
 - **Processors and microcontrollers**
 - **Communication interfaces and memories**
- **Long-term Cooperation with European Agencies:**
 - ESA, CNES, DGA, DLR ...
- **Internal Qualified Supply Chain**
 - DLA/ESCC: Wafer lot to qualified parts (France)
 - DLA: Assembly line (Thailand)

Ethernet for Avionics Networks

Ethernet is becoming a more common standard in modern spacecrafts

- Most used technology for local networks
- Used in automotive, industrial control and aircraft avionics
- Flexible, plug & play
- High data rates
- Open cross-industry standard (IEEE 802.3) with multiple providers
- Connectivity: works with any commercial laptop

Enabler of more Ethernet in Space – component qualification

TTEthernet for Spacecraft Network Systems

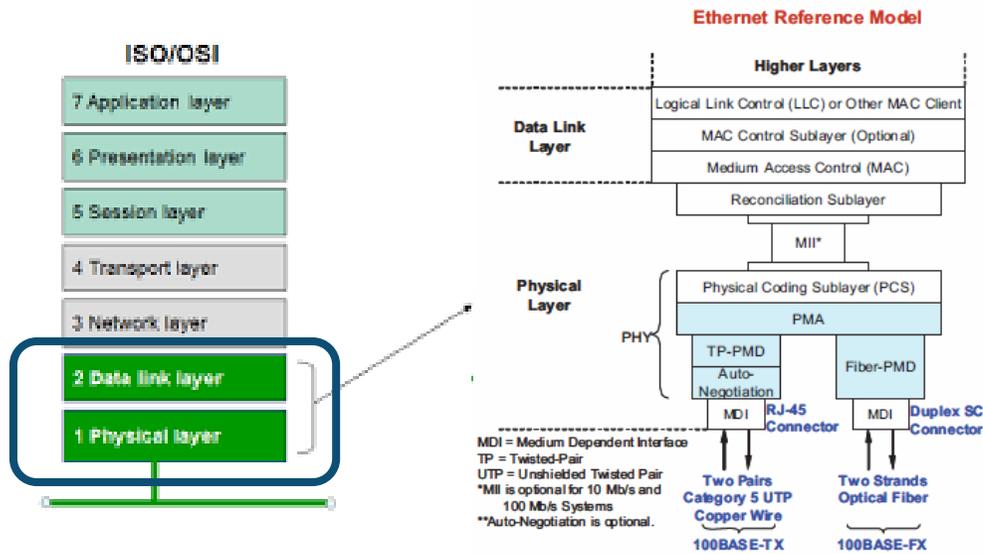

TTEthernet for high-reliable deterministic Ethernet for safety-critical systems

- Protocol on top of standard Ethernet
- Network devices synchronized autonomously via dedicated sync frames
- Redundancy, network fault management, diagnostics data reporting - abstracted fully by the network

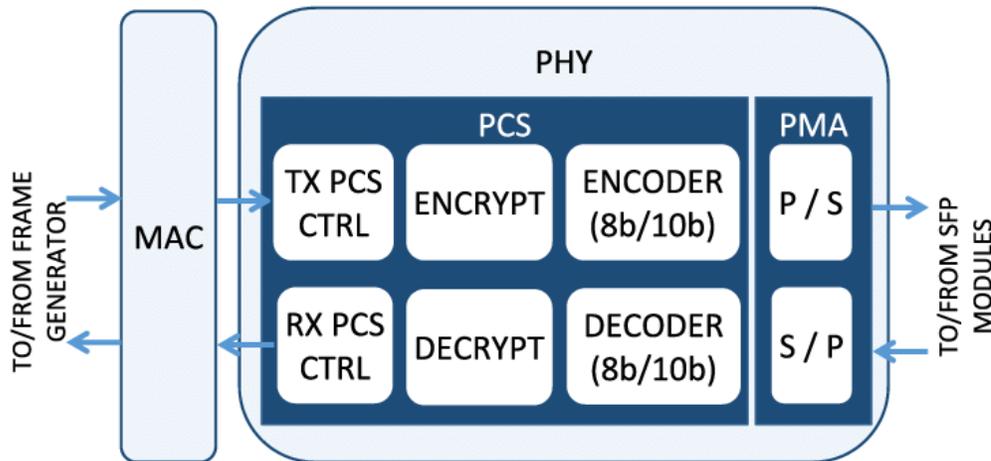

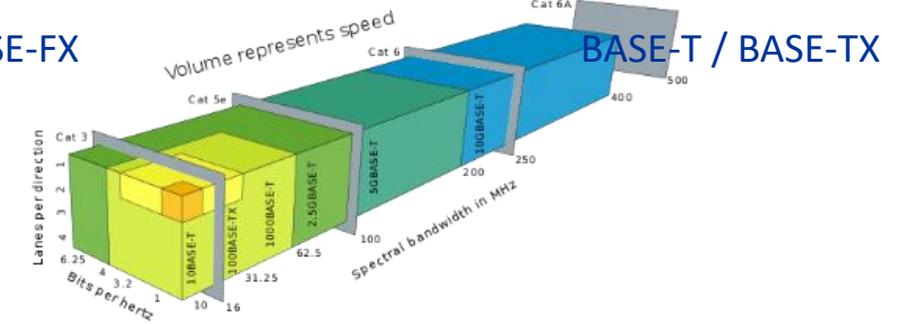

Used on Ariane 6 and as Gateway backbone

What is Ethernet PHY ?

BASE-X / BASE-FX

- **MAC layer** builds the Ethernet packets transmitted to the PHY.
- **PHY** includes the PCS and PMA (Physical Medium Attachment) sublayers.
 - **ENCRYPT and DECRYPT** modules perform the format preserving encryption/decryption of 8b/10b symbols at the PCS sublayer.
 - **P/S and S/P modules** are Parallel to Serial and Serial to Parallel modules, that transmit and receive the bitstream from the optical link.

VSC8541RT

Rad Tolerant Fast/Gigabit Ethernet PHY

Samples & Flight Models available

ESCC Detail Specification No. 9405/020

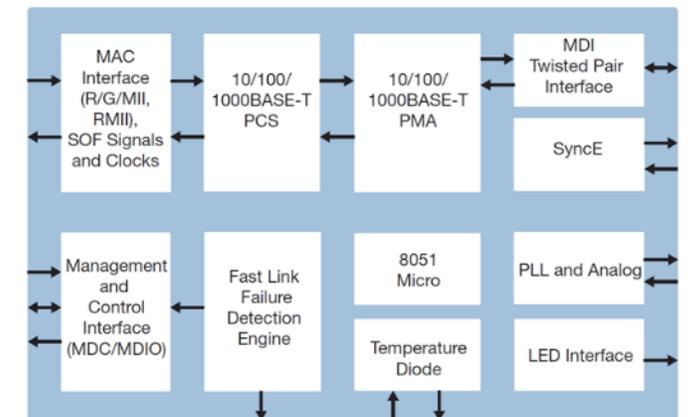

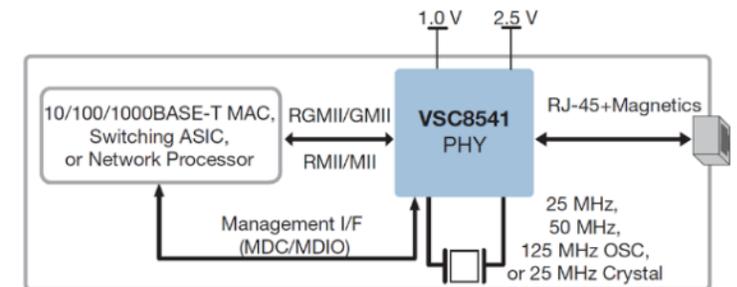

- 10/100/1000BASE-T Ethernet copper transceiver (IEEE 802.3ab compliant)
- RGMII/GMII/MII/RMII MAC interface
- Synchronous Ethernet and IEEE 1588 Start of Frame identification
- Patented line driver with low EMI voltage mode
- Wake-on-LAN
- Supports clocking from 25 MHz crystal or 25/50/125 MHz oscillator
- Host-free configurability through hardware strapping
- Best-in-Class power consumption
- Extended temperature range -55°C to 125°C
- CQFP68 and VQFN68 packages

Radiation

TID 100krad(Si)
SEL immune up to 78MeV.cm2/mg

- Ceramic CQFP68
- Plastic QFN68

COTS to Radiation Tolerant devices

- **Start from industrial/automotive products**

- Same mask set
- Same functionality
- Same development tools
- Easy access via commercial eval kit
- Free tool chain & libraries
- Same pin out as commercial device

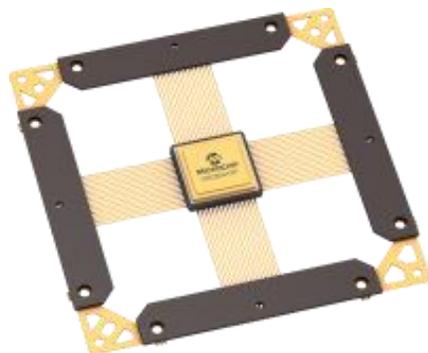

- **Hardening of critical parameters**

- Process tuning for **no Single Event Latch-up at least up to 62 MeV.cm²/mg @ Tmax**
- Total Ionizing Dose – **Specific screening & Lot selection (>50Krad)**
- Radiation report including SEU full characterization

- **Scalable solutions**

- Space Grade Ceramic:

- QML qualification & screening equivalent
- Minimum Ordering Quantity of 5 units

- Hirel Plastic (HP):

- 3-Temp screening + Ext. Visual Inspection
- Minimum Ordering Quantity > 200 units

VSC8541RT Radiation Results

- Tests supported by CNES (Centre National d'Etudes Spatiales)
- **Single Event Latchup – SEL**
 - Performed under worst case conditions ($V_{CC_{max}}$ & 125°C)
 - In accordance with ESCC25100 and MIL STD 883/Mil PRF 38535 standards
 - Single Event Latch-Up LET threshold is higher than 78 MeV.cm²/mg
- **Single Event Upset – SEU**
 - SEFI conditions as well as Hard and Soft reset occurrence characterized
 - Weibull curves and MTBF tables available for the different SEFI conditions
 - No Power Off/On sequence was needed to restart the device after a link loss
- **Total Ionizing Dose – TID**
 - Performed according to MIL STD 883 TM1019 & ESCC22900 standards
 - 27 parts remained inside the specification limits after test read-out at 100krad(Si) on parametrical parameters and no functional deviation was observed
- **Radiation report available upon request**

VSC8541RT Qualification Results

- Goal is to demonstrate high reliability and ability to withstand user environmental constraints
- Qualification is based on:
 - Technology Qualification
 - Product Qualification for space applications
- **Technology Qualification**
 - Qualified with projected lifetime at 110°C higher than 15 years
- **Product Qualification for Space applications**
 - Successfully qualified on 3 successive assembly lots
 - All tests passed successfully : HBM & CDM ESD, Electrical latch Up, Life test, Assembly/Packaging reliability tests, Construction analysis and Irradiation tests
- **VSC8541RT fully qualified** and Qualification Package available upon request
- Part of European Preferred Part List => **ESCC Detail Specification No. 9405/020**

BASED ON TYPE VSC8541RT

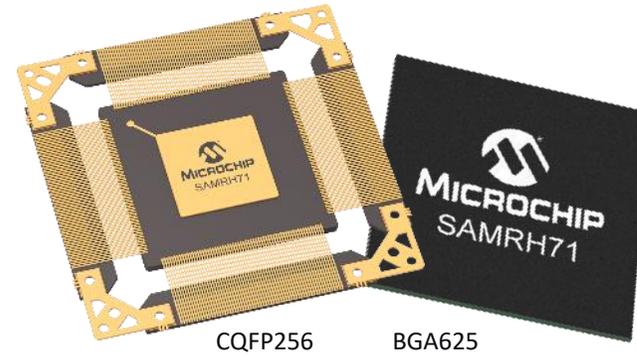

ESCC Detail Specification No. 9405/020

SoC w Embedded Ethernet for Space

- Rad Tolerant μ C

- Rad Hardened processor

Radiations
TID 150krad (Flash limited to 20krad)
SEL immune up to 62 MeV
SEU LET >20Mev.cm2/mg (Xsection <10-9 cm2/word)

- ARM Cortex M7 SoC w TCM/MPU & DSP capabilities
- >200DMIPS, 1MB SRAM w ECC, 128KB Flash w ECC
- Spw, 1553, CAN FD, **100Mbit Ethernet gPTP/1AS TSN**
- Ready for Spacewire to Ethernet Gateway

Ethernet for Space - Looking forward

- **Supporting European space industry & agencies towards more Ethernet solutions**
- **Targeting new RT/RHBD Ethernet devices for Space**
 - Ethernet PHY
 - SGMII, FX & 10Gbit
 - Ethernet Switch
 - 1 to 10Gbit (w/wo TSN)
 - Ethernet SoC
 - Gbit ARM MCU & MPU
 - Gbit embedded IP for FPGA

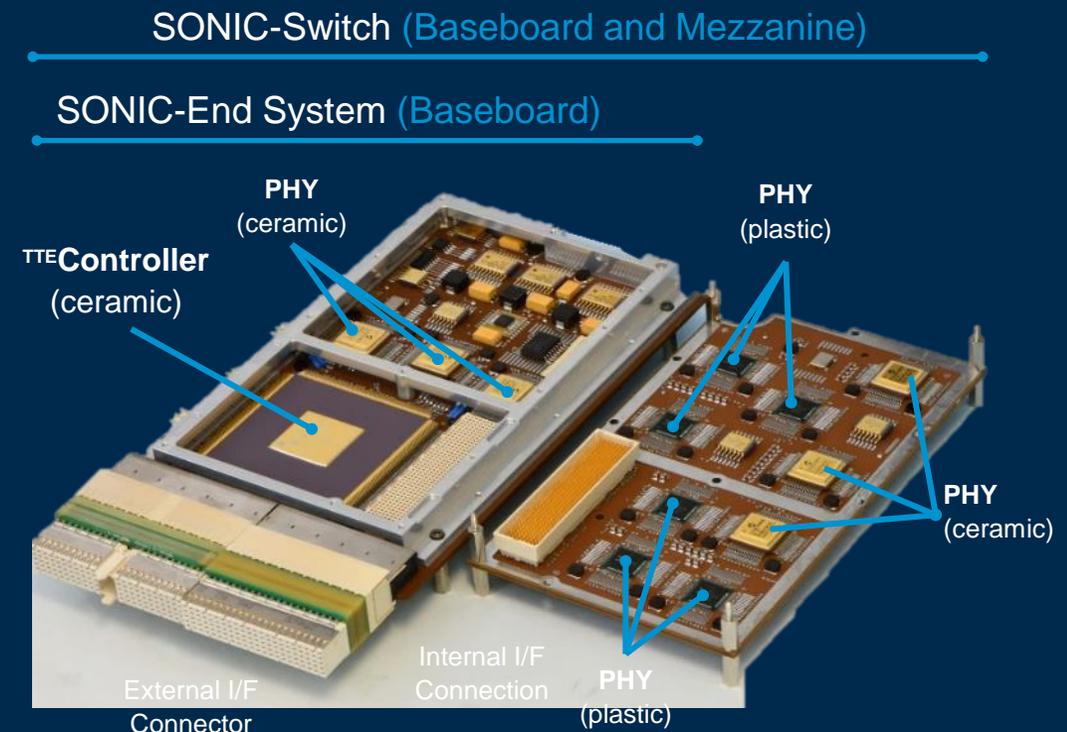

TTEthernet[®] Equipment for Gateway as Reference Design with VSC8541RT

Switch or network interface card (SONIC)

- **TTESwitch:** interconnection of several nodes
- **TTEEnd System:** ability for host computer to connect to TTEthernet

Main components

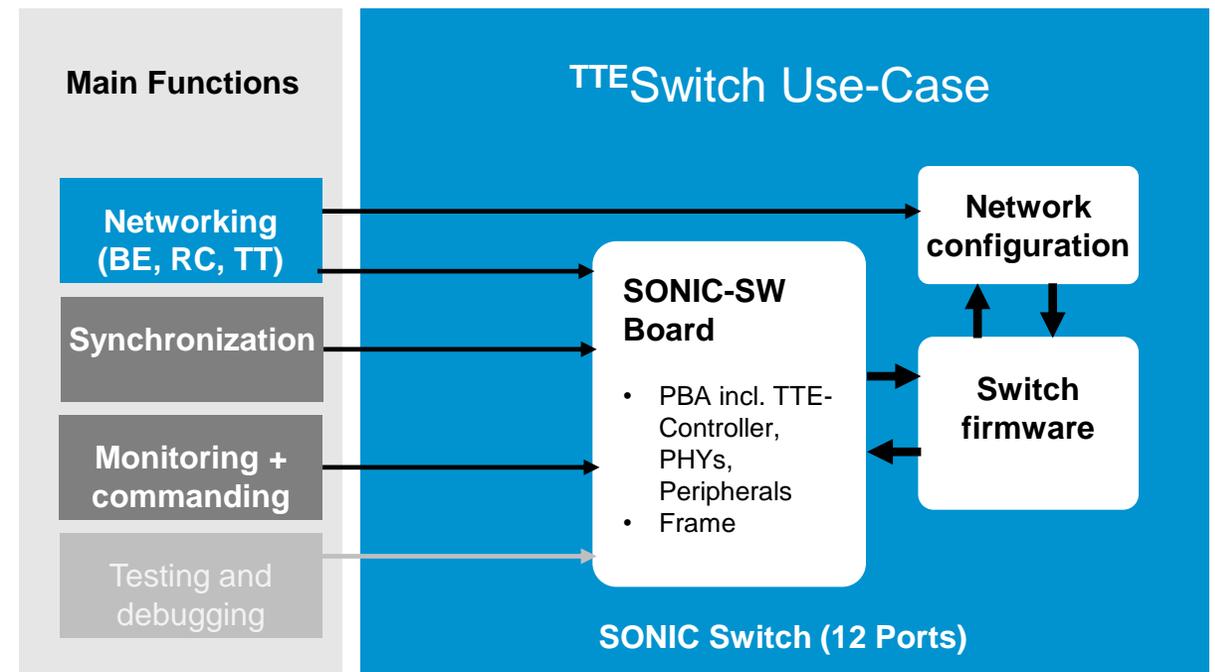

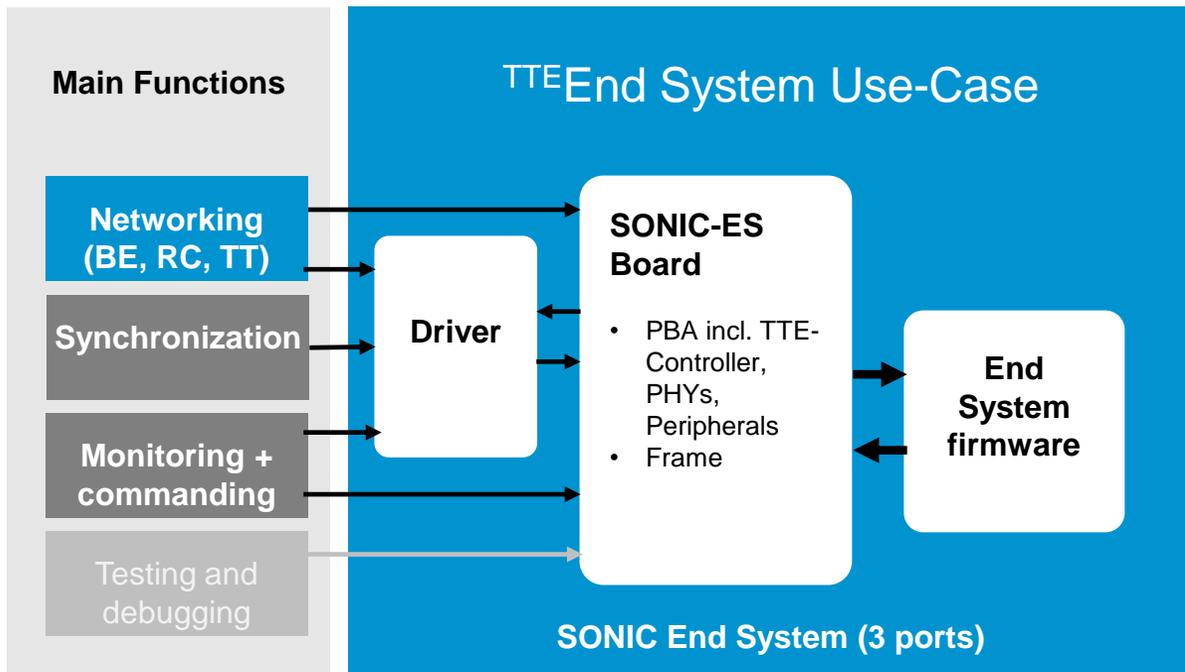

- **TTEController:** Main functional block for TTEthernet, contributing to all high-level functions
- **VSC8541RT PHY:** Translation of MII to MDI signals (100/1000 BASE-T) to provide connectivity to the function of the TTEController

SONIC Elegat Bread Board (EBB) used for development tests

SONIC Architecture and Main Functions

- Modular design concept to provide flexibility, easy integration and maintenance for different use cases
- SONIC supports multiple network lanes for fault-tolerant computer architectures

VSC8541RT Performance Validation

Objective

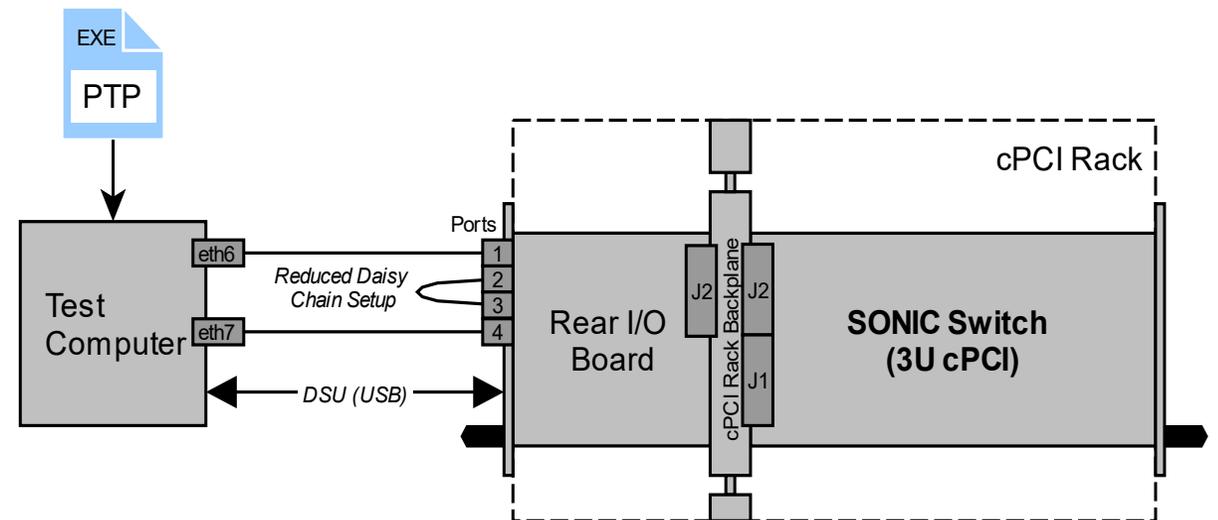

- Functional validation and performance measurements as a part of component qualification
- Link speed: 1Gbit/s
- Tests performed on Development Model (DM) and Elegant Bread Board (EBB)

Test Setup

- Ports 2-3 daisy chained
- Performance test script (PTP) running on Host CPU
- Throughput measured via Wireshark and recorded via the test script (log-file)
- Dropped frames counted and recorded (log-file)

Switch ID	SONIC Switch Model	TTE-Controller	PHYs (Baseboard)	PHYs (Mezzanine)
SW1	DM	plastic	plastic	plastic
SW2	EBB	ceramic	plastic	plastic
SW3	EBB	ceramic	ceramic	plastic

Overview of SONIC Switch models used for performance tests

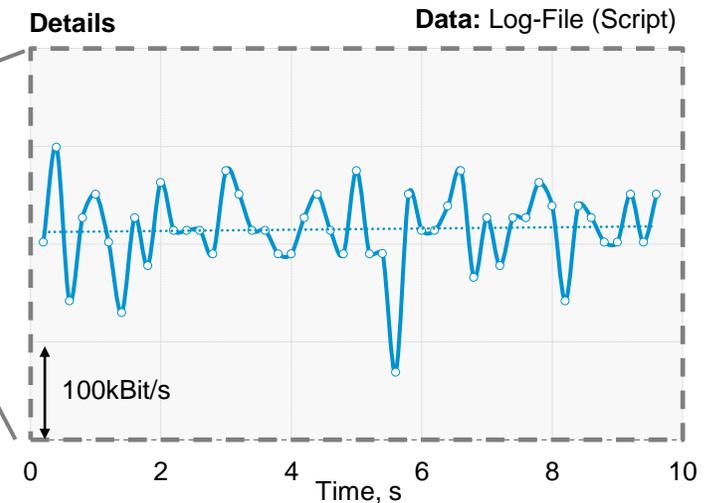

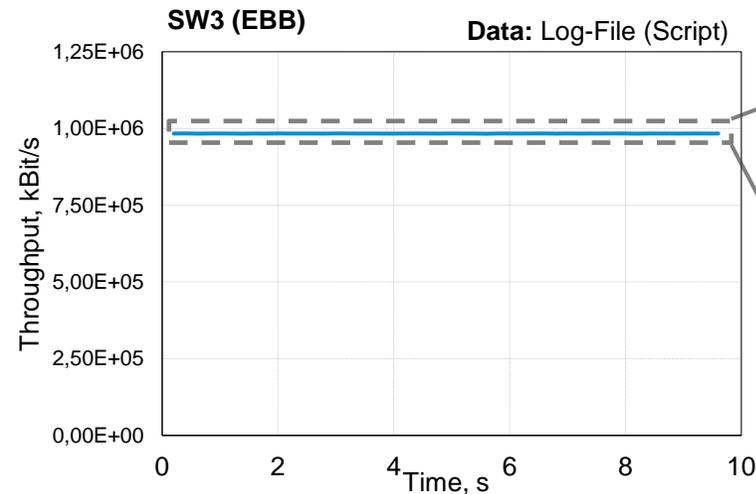

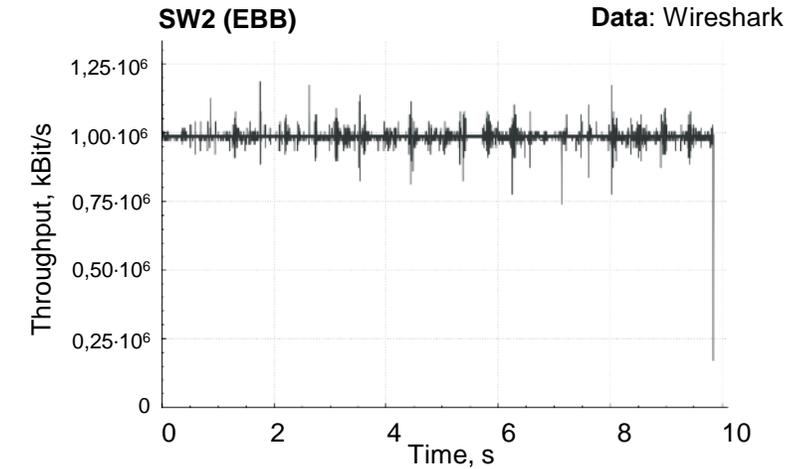

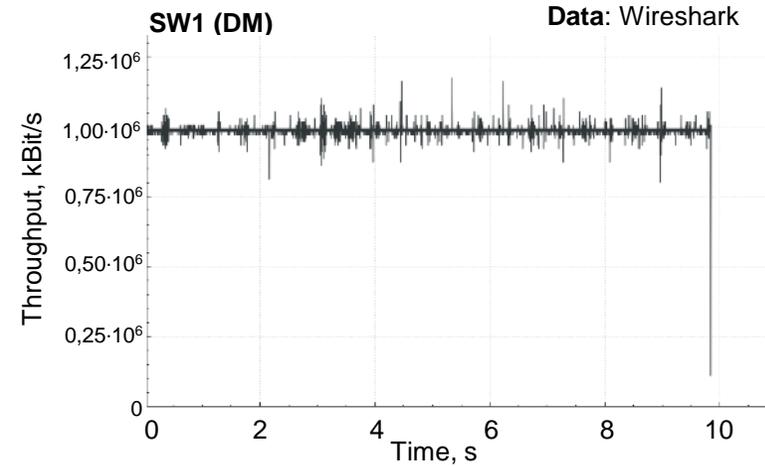

SONIC Switch performance test setup with reduced daisy chain

VSC8541RT Performance Validation

Test Results

- Successful tests for
 - Different SONIC Models (DM/EBB)
 - TTE-Controller and PHY configurations (plastic/ceramic)
- 1Gbit/s throughput successfully demonstrated
- No dropped frames

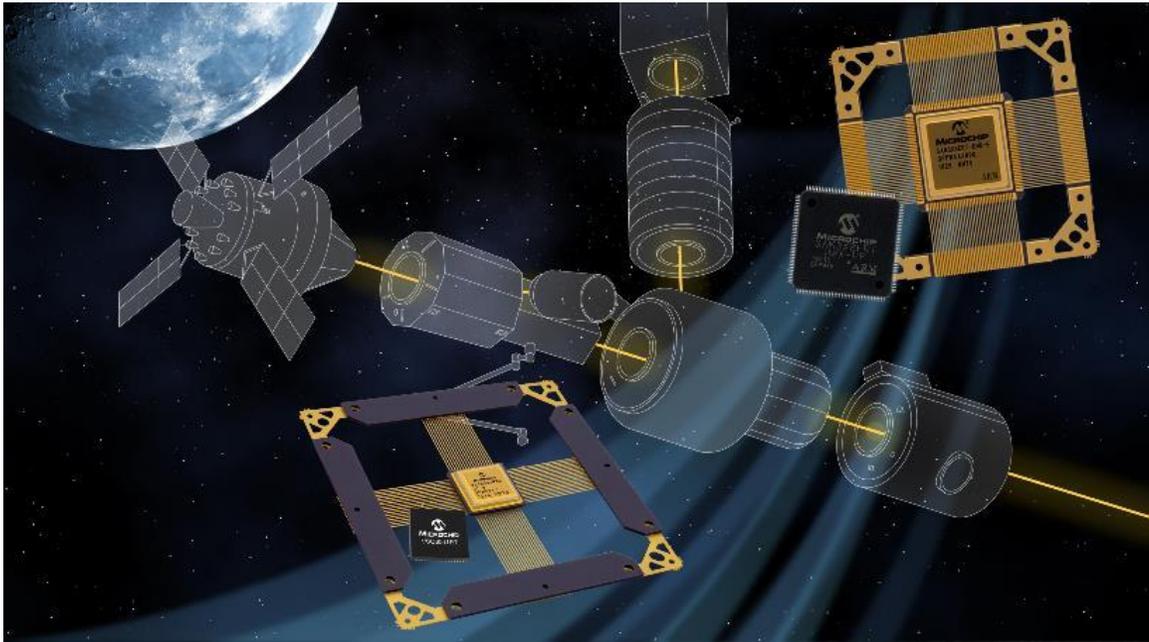

Throughput results for different SONIC Switch configurations

Conclusion

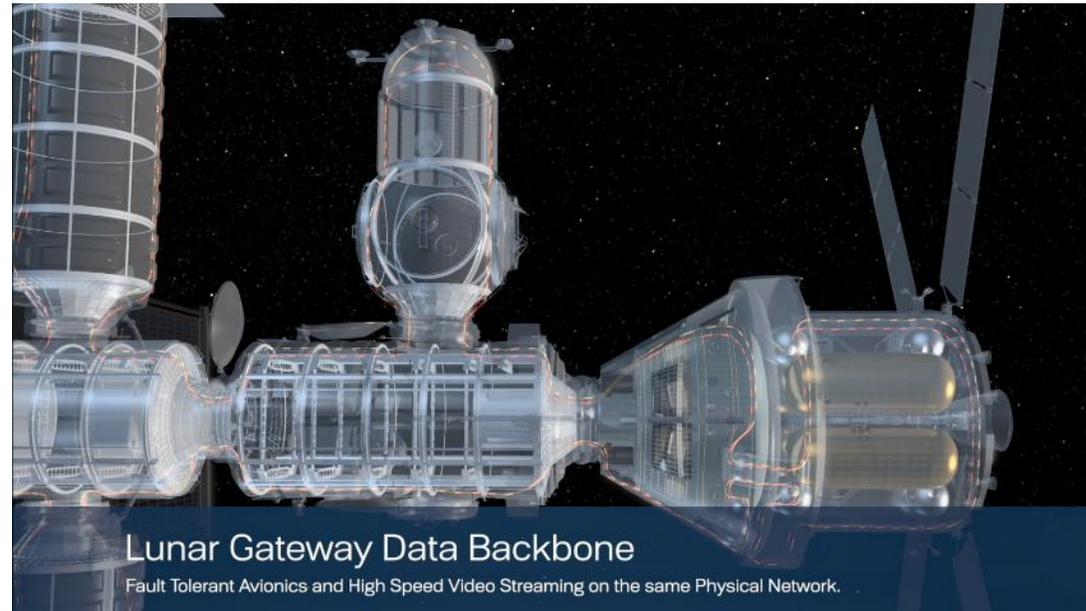

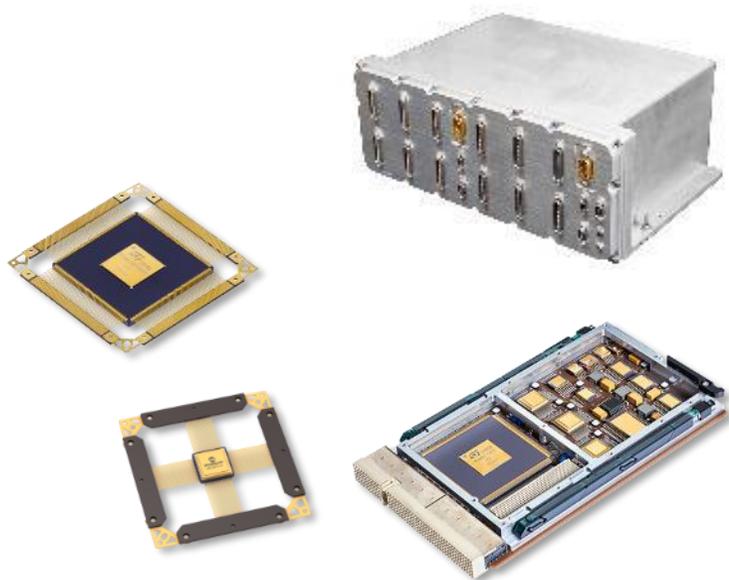

- Ethernet PHY successfully qualified
- TTE-Controller (TTTech) and VSC8541RT (Microchip) – key components for high-speed deterministic Ethernet avionics networks for future spacecrafts
- Reference design based on high-profile human space flight Gateway equipment

Thank you & please visit us at our exhibition booths to learn more about chip and board-level solutions for dependable avionics

Thank You
