

**Title:** PUS standard updates - file services

**Agency/Company:** ESA/ESTEC

**Author(s):** Serge Valera

**Abstract:**

The ECSS WG responsible for producing the draft of the ECSS-E-ST-70-41C Telemetry and Telecommand Packet Utilisation standard is currently finalising the draft for public review.

This presentation, tailored for this SAVOIR event, presents:

- The file related capabilities introduced in this new version of the Standard
- The status of the on-going WG assessment related to retaining in PUS C the large data transfer service (i.e. PUS A Service 13) or implementing a simplified version of that service, i.e. a large packet transfer service.

The SAVOIR feedback related to this presentation will be considered by the ECSS WG to finalise the draft for public review.
