

Zuken is a Global Digital Engineering company.

For four decades, Zuken has been supporting our customers **design** and **manufacture** electronic and electrical systems.

Zuken's design tools are supported by a scalable portfolio of engineering data management solutions integrating high-level PDM/PLM systems so enabling digital continuity.

MBSE extends the Zuken digital engineering platform so to manage complexity, improve collaboration and traceability, and enable the digital thread across the life cycle.

GENESYS is the only MBSE platform based on a natural language metamodel that:

- Enforces **coherent** and complete system architecture
- Maintains **consistency** between all layers, resulting in **integrity**
- **Generates** diagrams and views from the model, ensuring **consistency** and minimising **maintenance**
- Captures the entire design journey, promoting a shared, collective understanding
- Creates and conserves **traceability** throughout the design
- Supports all **SysML** and many traditional systems engineering diagrams
