

Masaïs

Presenter: Christophe Honvault (ESA)

The SAVOIR-MASAIS Working Group has been created in summer 2014 with the goal to define the functional, performance, operational and interface requirements of the on-Board Mass Memory function and its management. The first step is the consolidation of the system/operability requirements. This has been done by gathering agencies and primes in a Working Group (SAVOIR-MASAIS Working Group v0: ESA, CNES, DLR, Airbus, TAS and OHB) to produce the first version of the SRD/OIRD requirements related to Mass Memory function and a collection of lessons learnt. This first version will be presented.

In a second step, the SAVOIR-MASAIS Working Group will be extended to integrate mass memory industry representatives (SAVOIR-MASAIS Working Group v1) with the objective to review the SRD/OIRD requirements and complement the requirements of the on-Board Mass Memory function and its management.
