

## ***A First Dive into COrDeT***

*Presenter: Jeremie Pouly (CNES)*

CNES has just started a technical evaluation of COrDeT material, focusing on the OSRA specification. In order to verify the exportability of COrDet concepts, CNES is assessing COrDeT compatibility with MARTE profiles and CHES toolset.

The first feeling is that COrDeT OSRA basics are a wrap-up of good practice rules of component-based engineering compatible with our system/software state-of-the art development approach. Nevertheless, the preliminary results of CNES evaluation raise some questions that will be addressed during the presentation. On-going activities will also be presented.
