Deep Neural Networks are becoming key components

Solar ejection classification

Space landscape segmentation

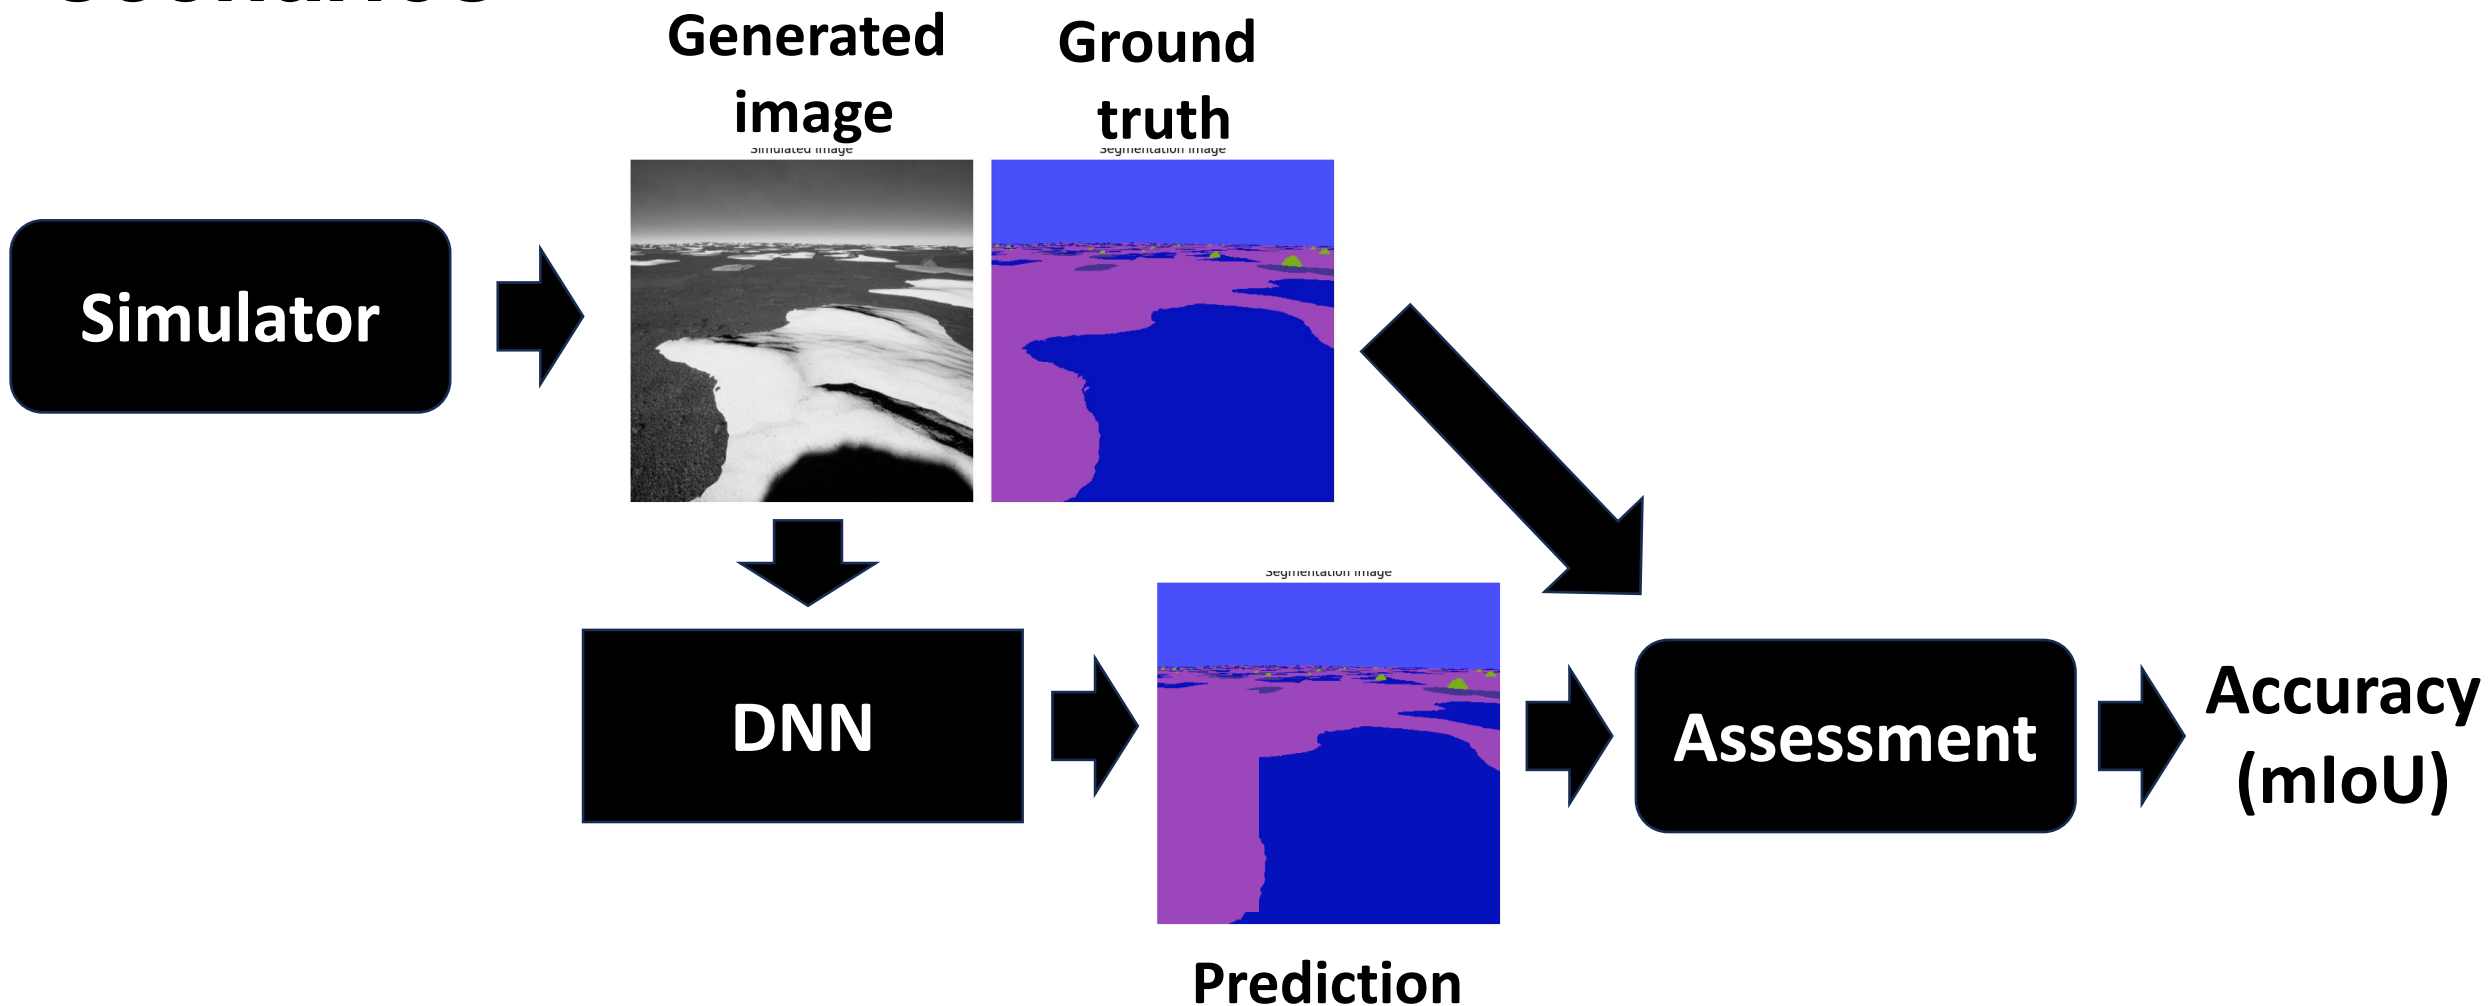

But we still have lot of doubts after
traditional DNN training and testing
process

- Did we miss testing any scenario where the DNN underperforms?
- How to improve the DNN at limited cost?
- Why does the DNN fail?

- Did we miss testing any scenario where the DNN underperforms?

Solution: Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

Generated
image

VS

Real images

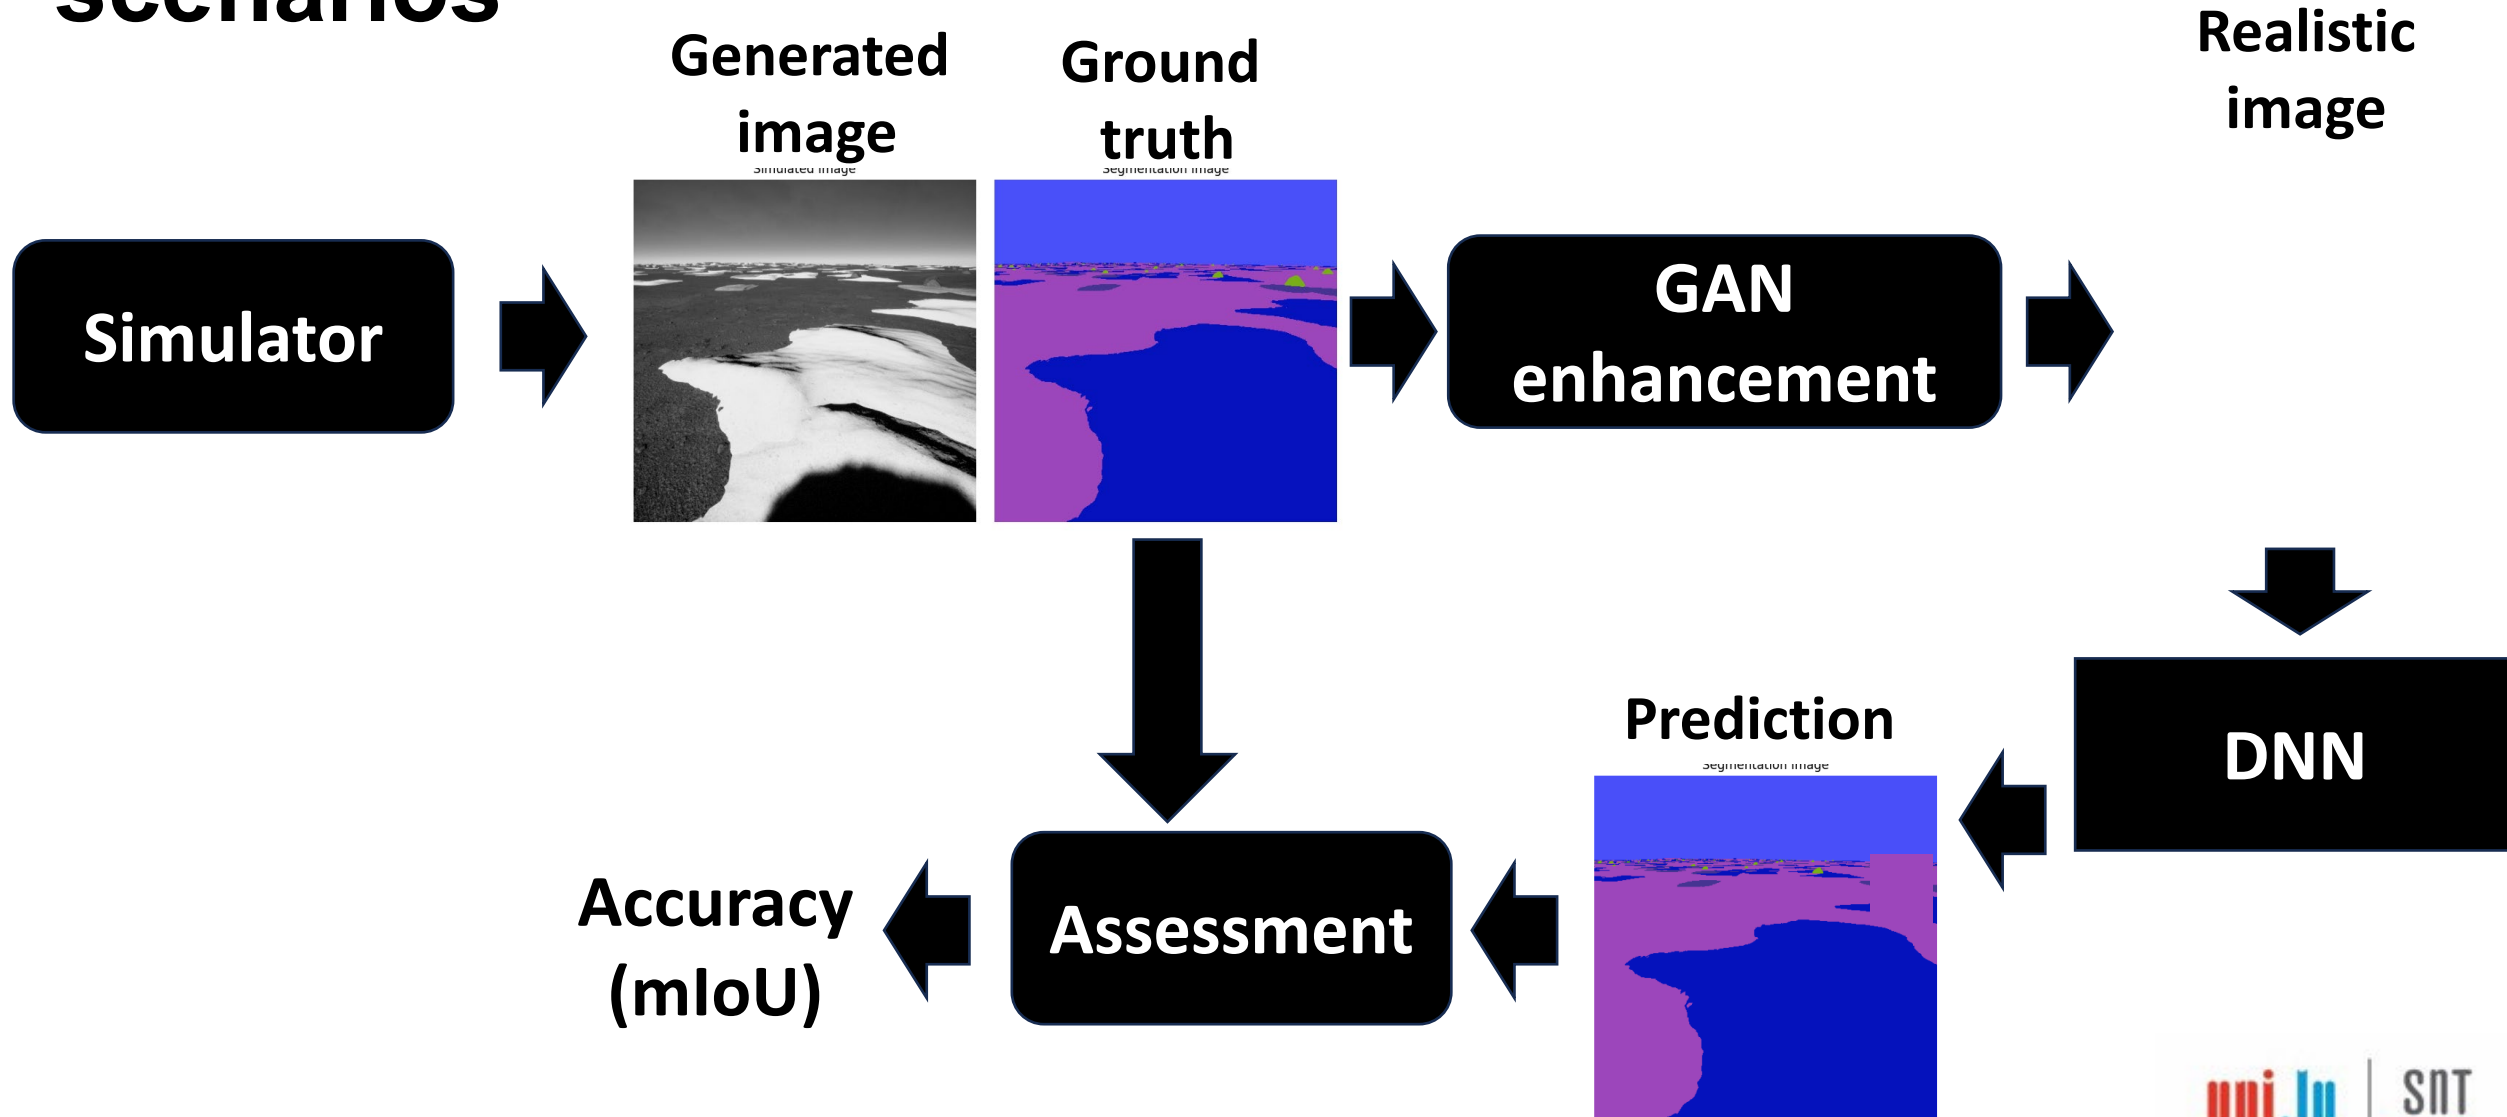

Unrealistic
Out of distribution

DNN assessment is unreliable

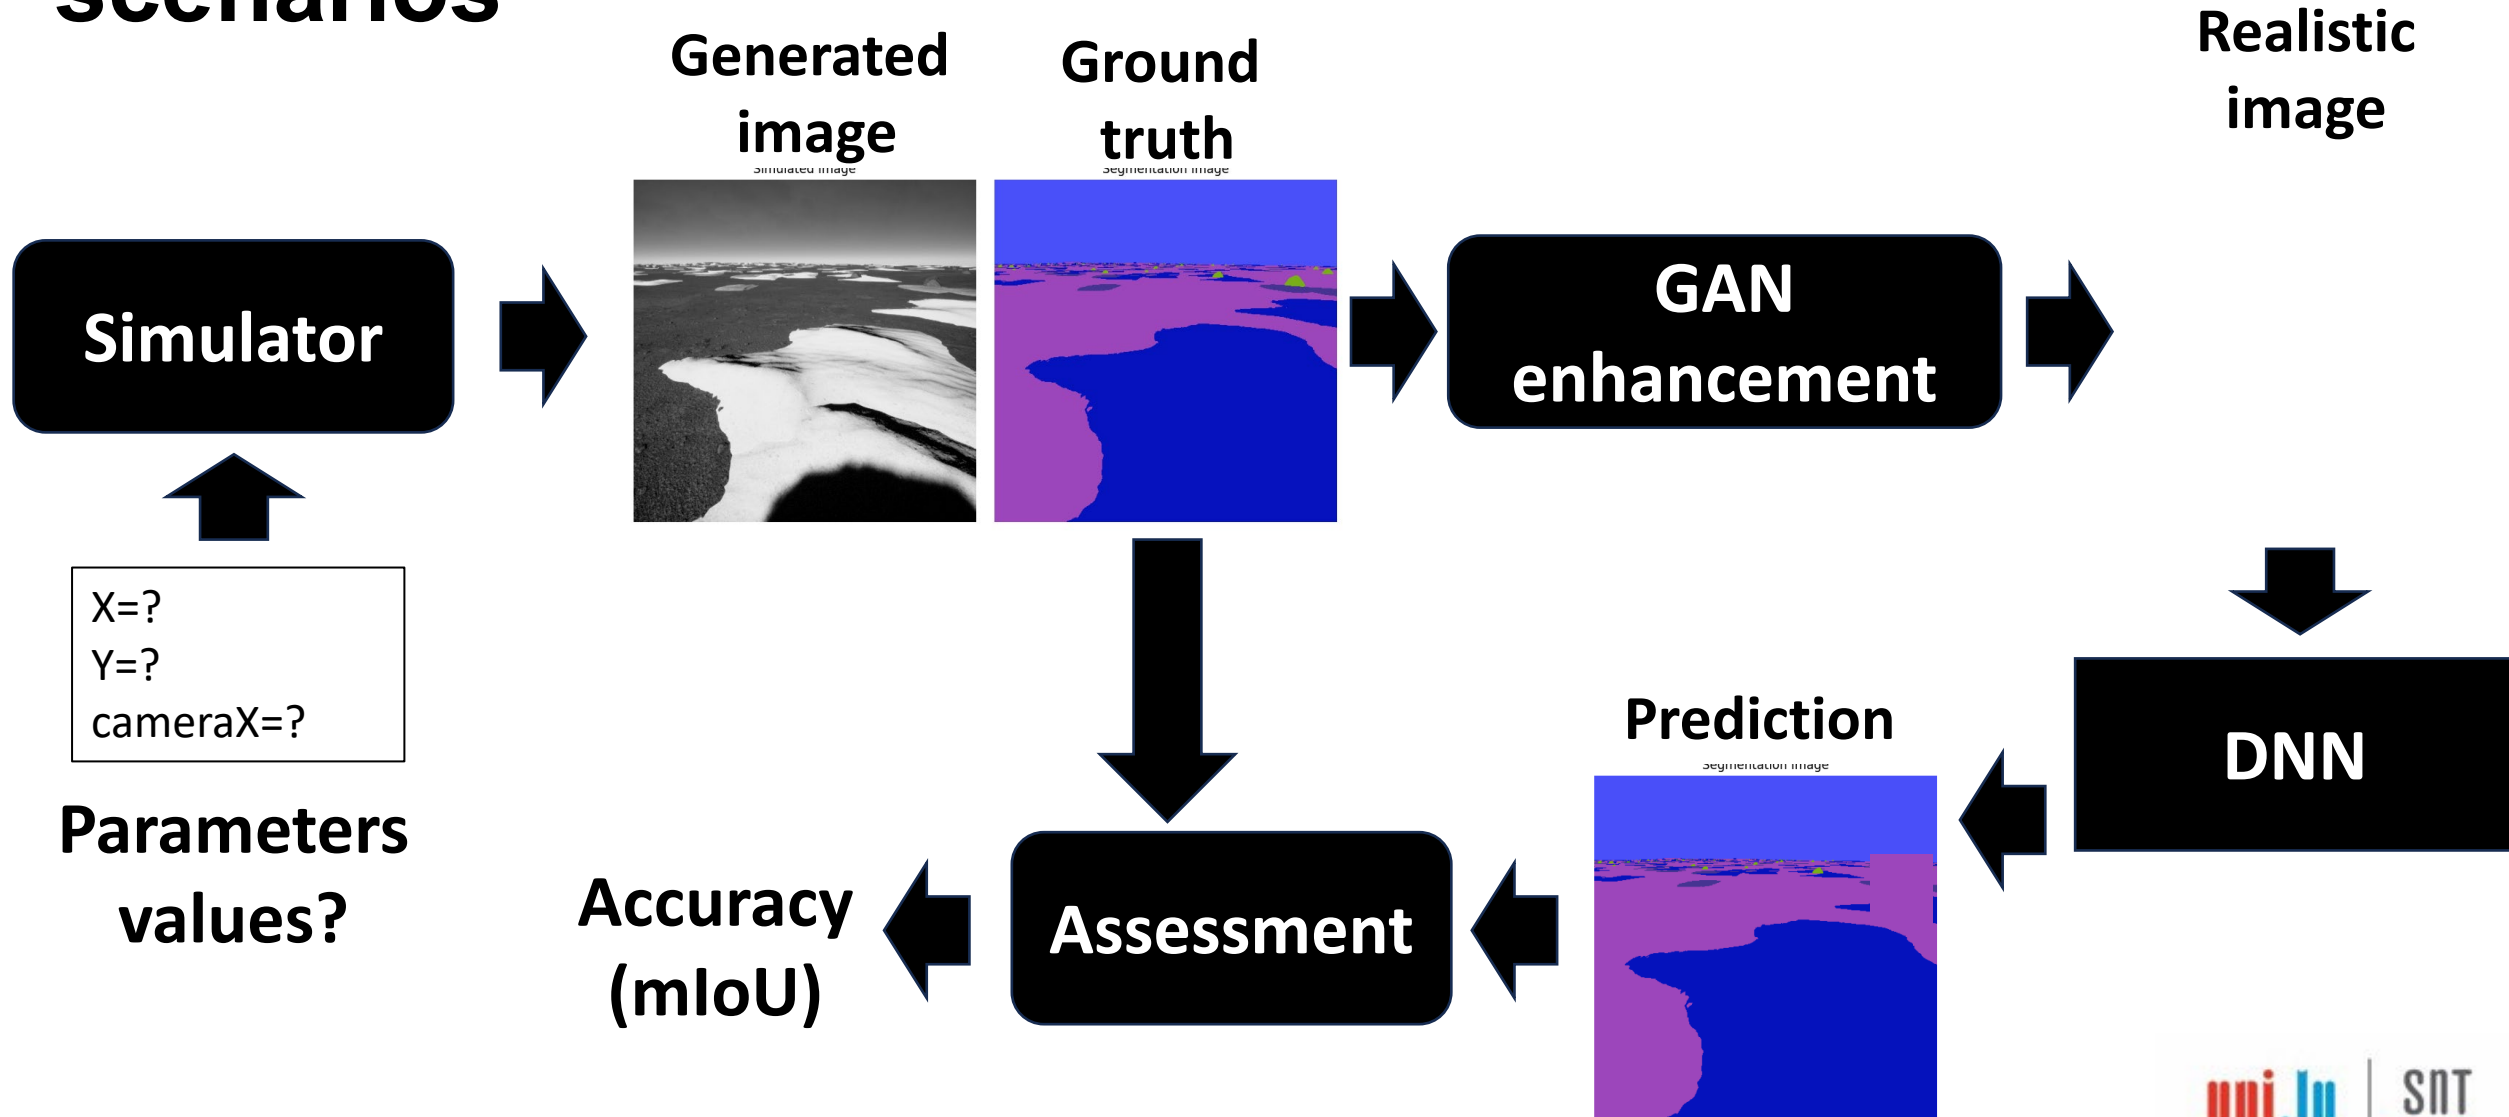

Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

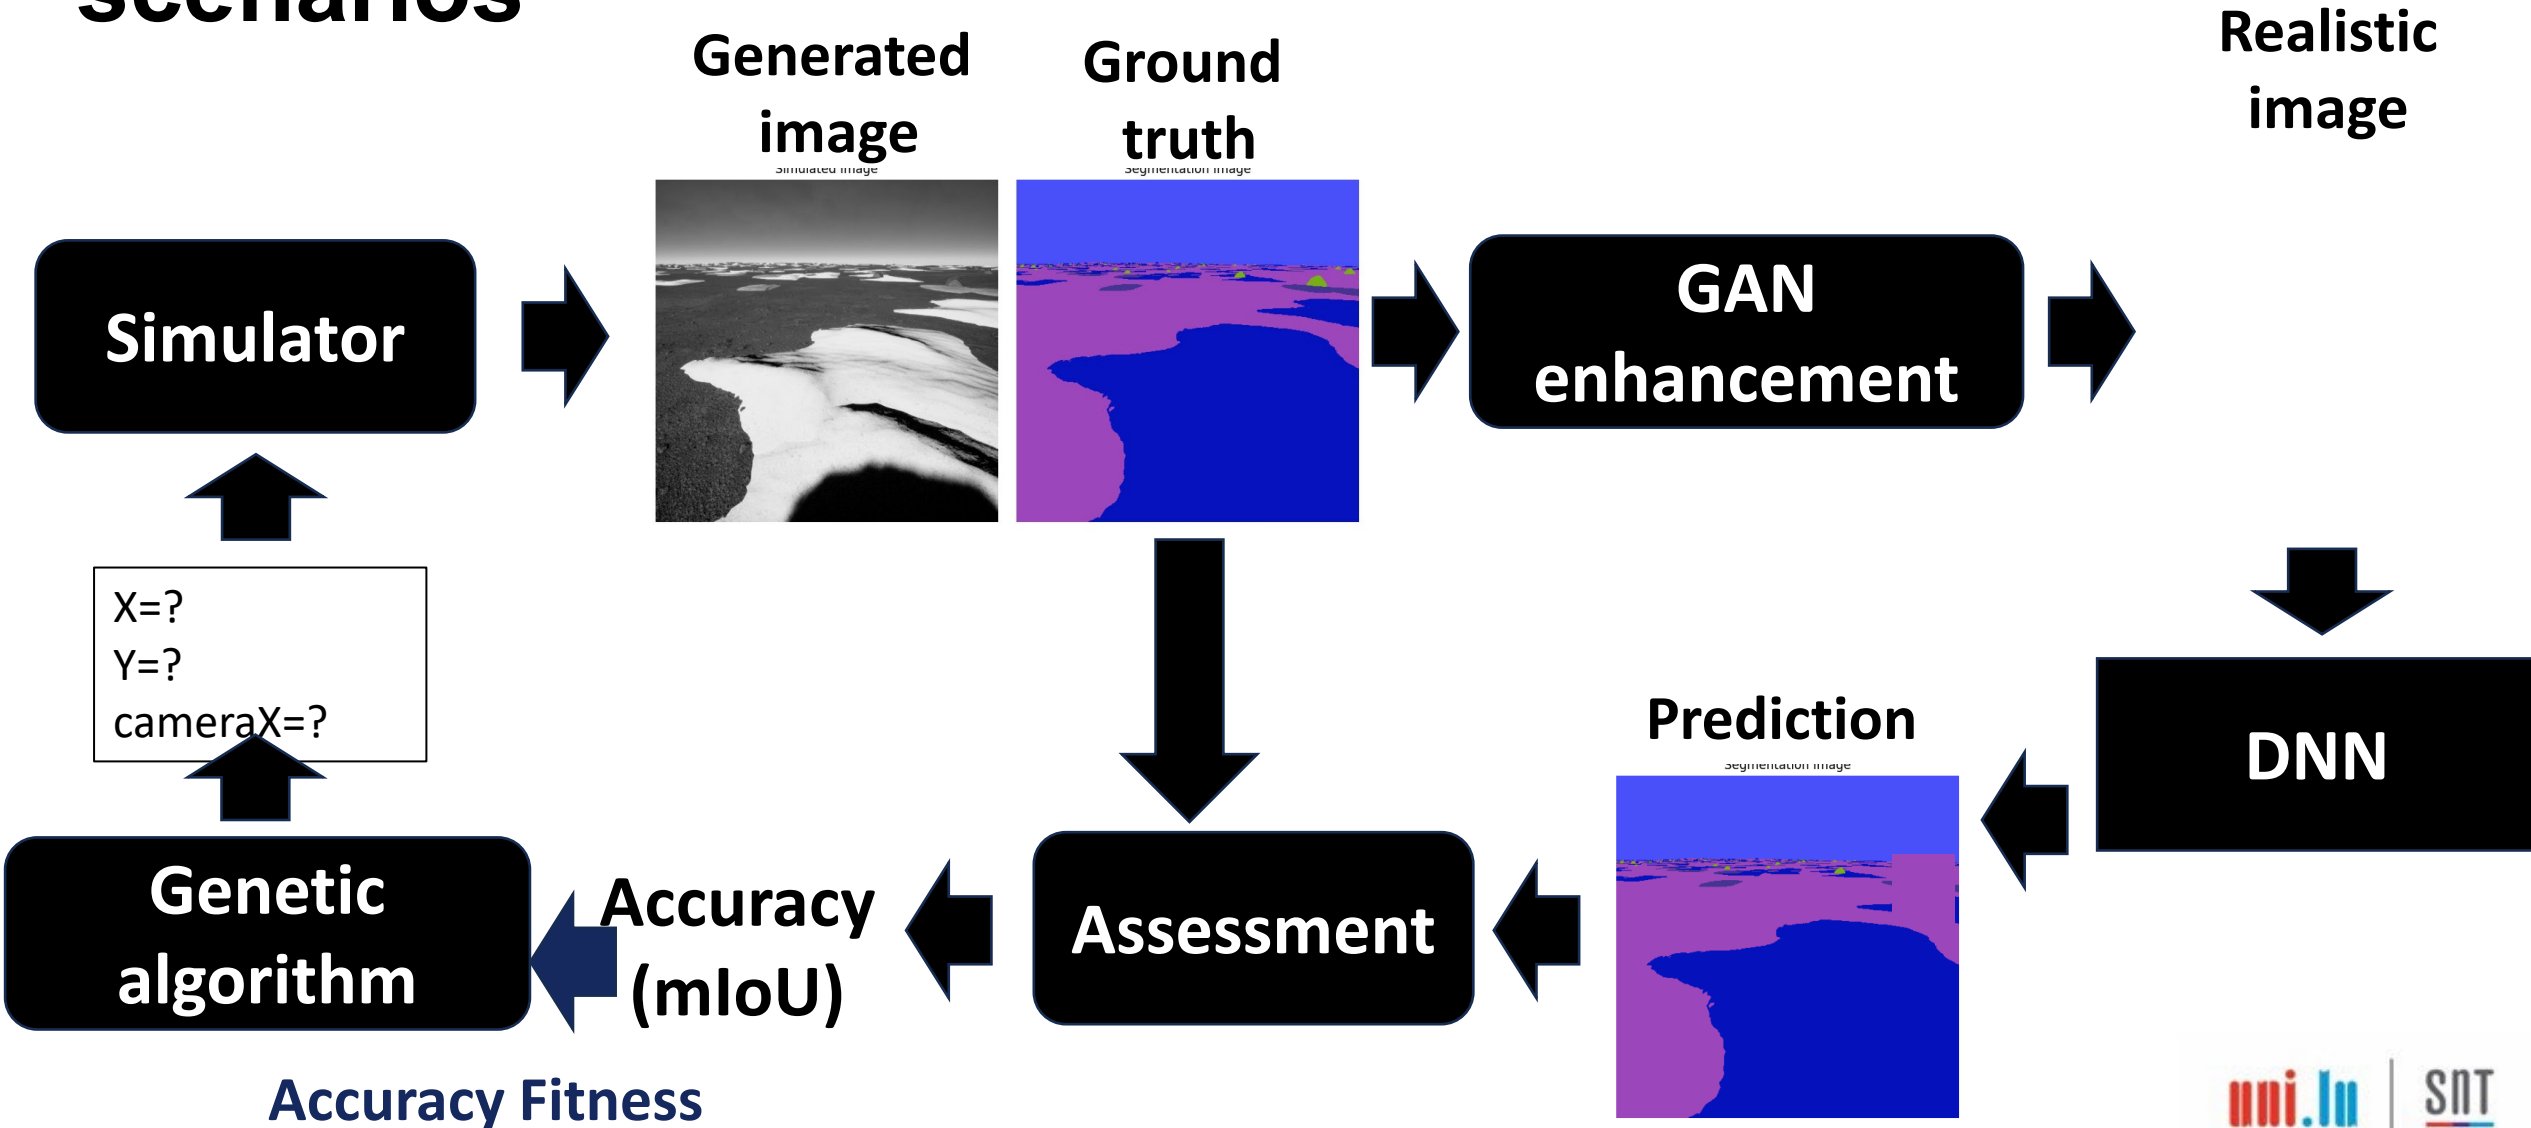

Test the DNN with additional (underperforming) scenarios

Realistic

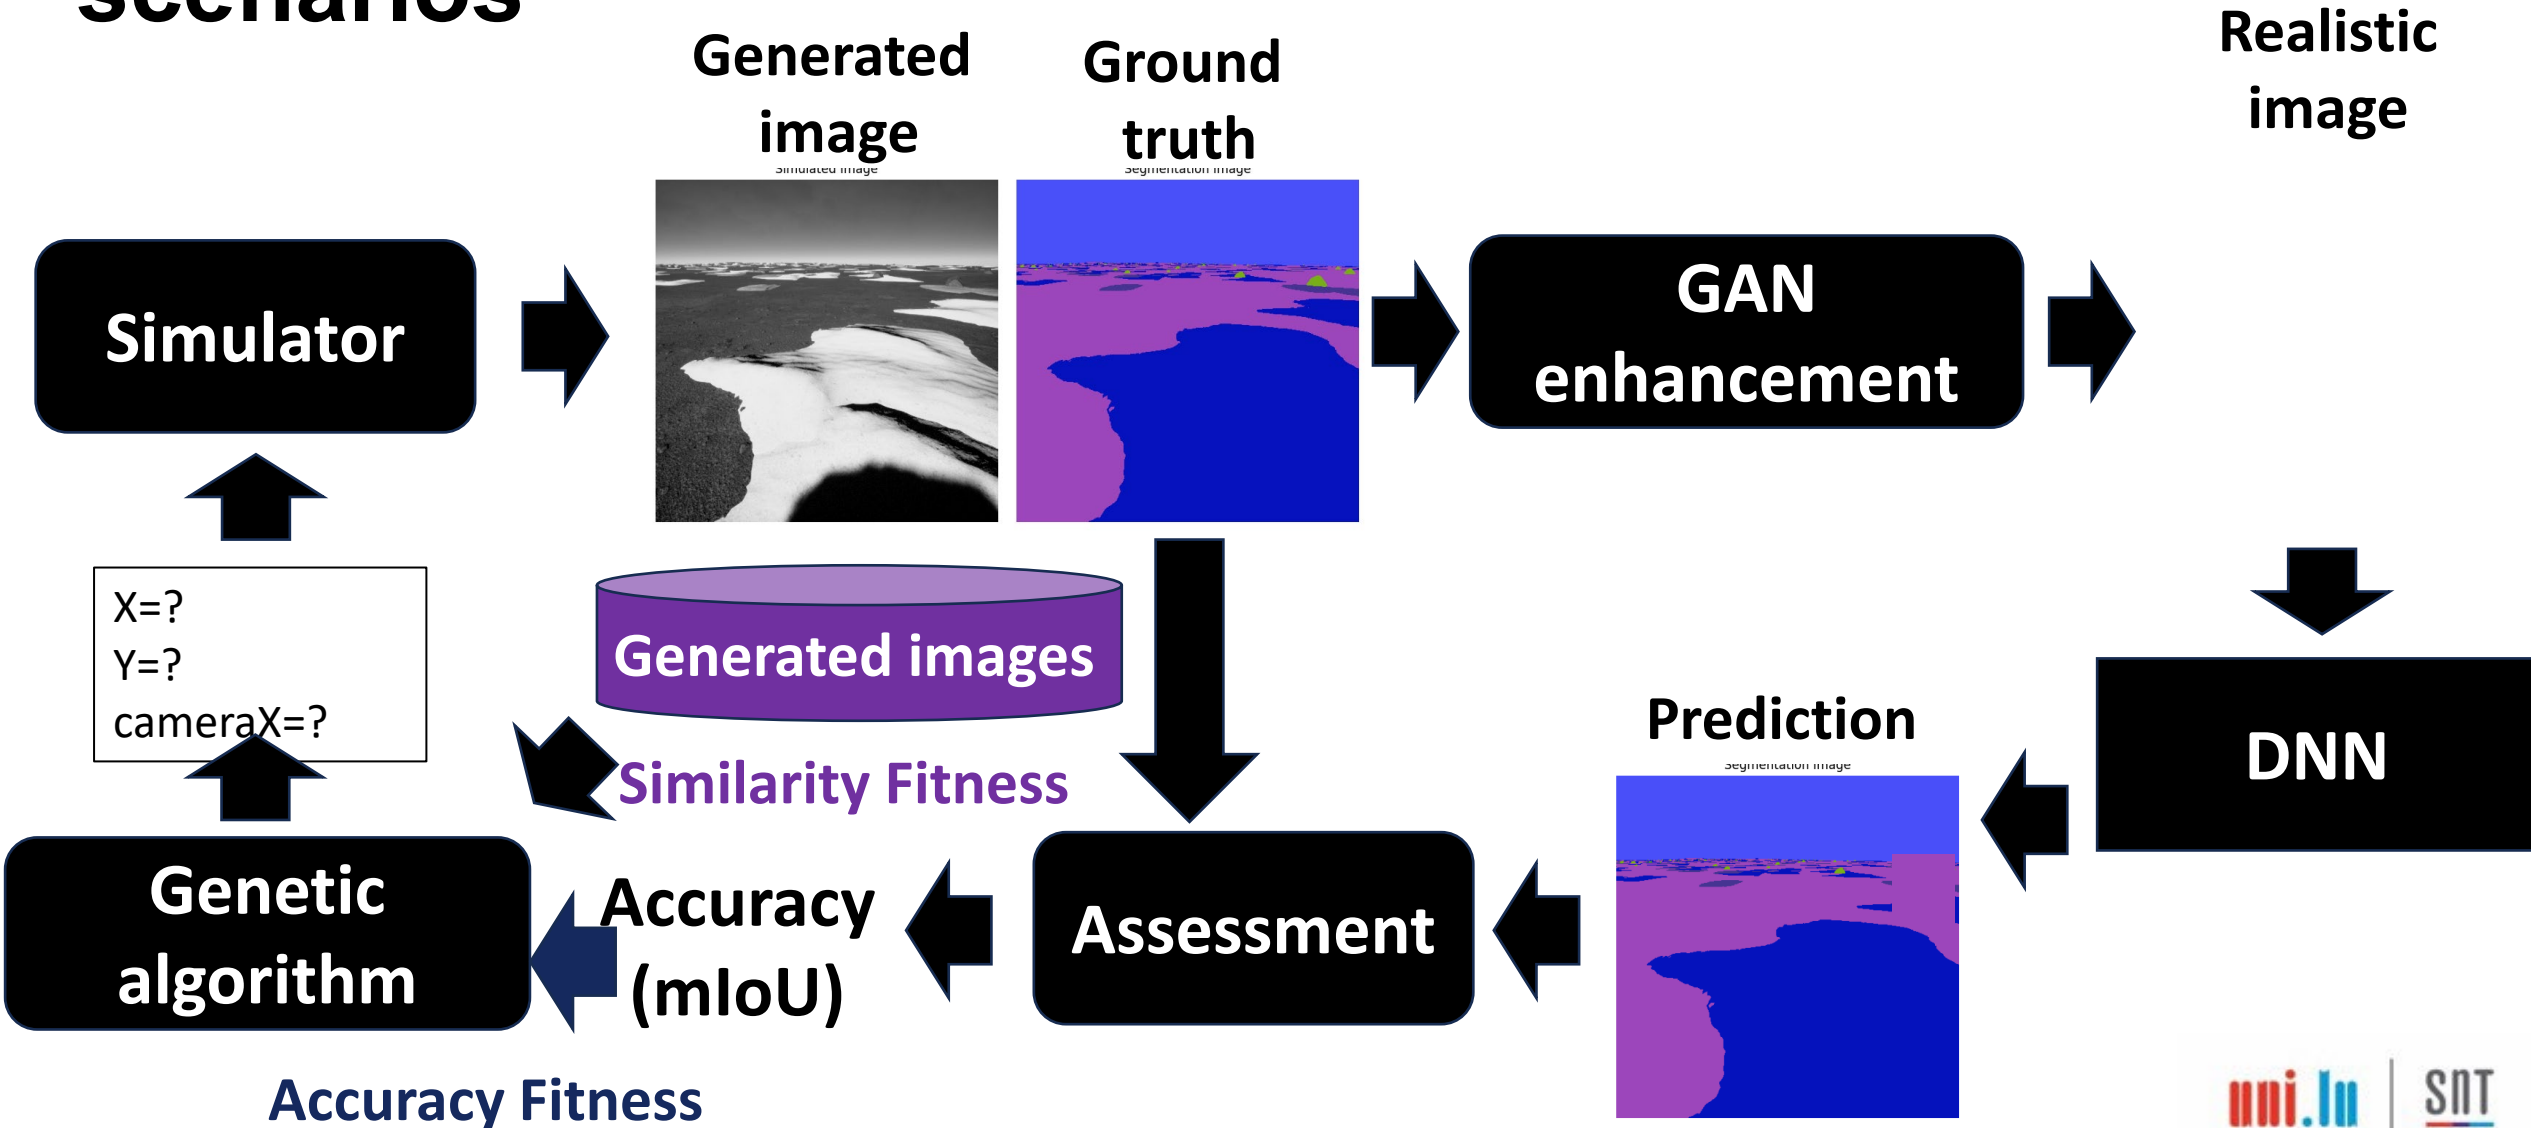

- Genetic algorithms evolve a population of individuals (here, simulator parameters) that minimise a given fitness
- In this case, they drive the generation of images that lead to worse prediction

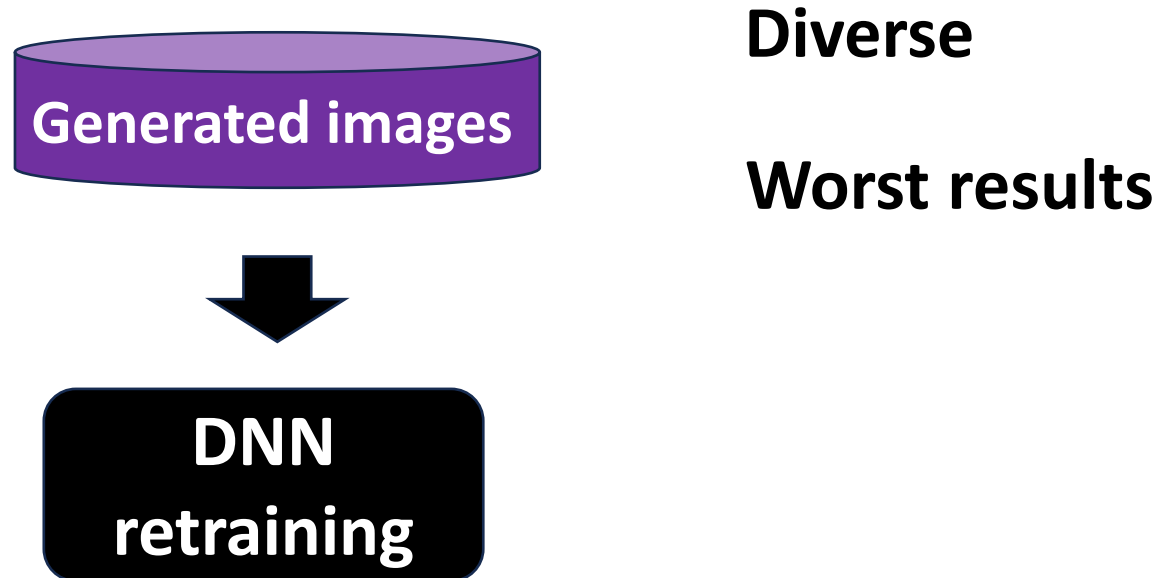

Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

Test the DNN with additional (underperforming) scenarios

Improve the DNN at limited cost

Generated images

DNN
retraining

Diverse

Worst results

Retraining of DeepLabV3 for AI4Mars

Retraining Set	Median	5th Percentile	1st Quartile	3rd Quartile	Average
Original DeeplabV3	0.47	0.17	0.34	0.59	0.48

- ~~Did we miss testing any scenario where the DNN underperforms?~~
- ~~How to improve the DNN at limited cost?~~
- Why does the DNN fail?

Why does the DNN fail?

Hard to determine similarities manually

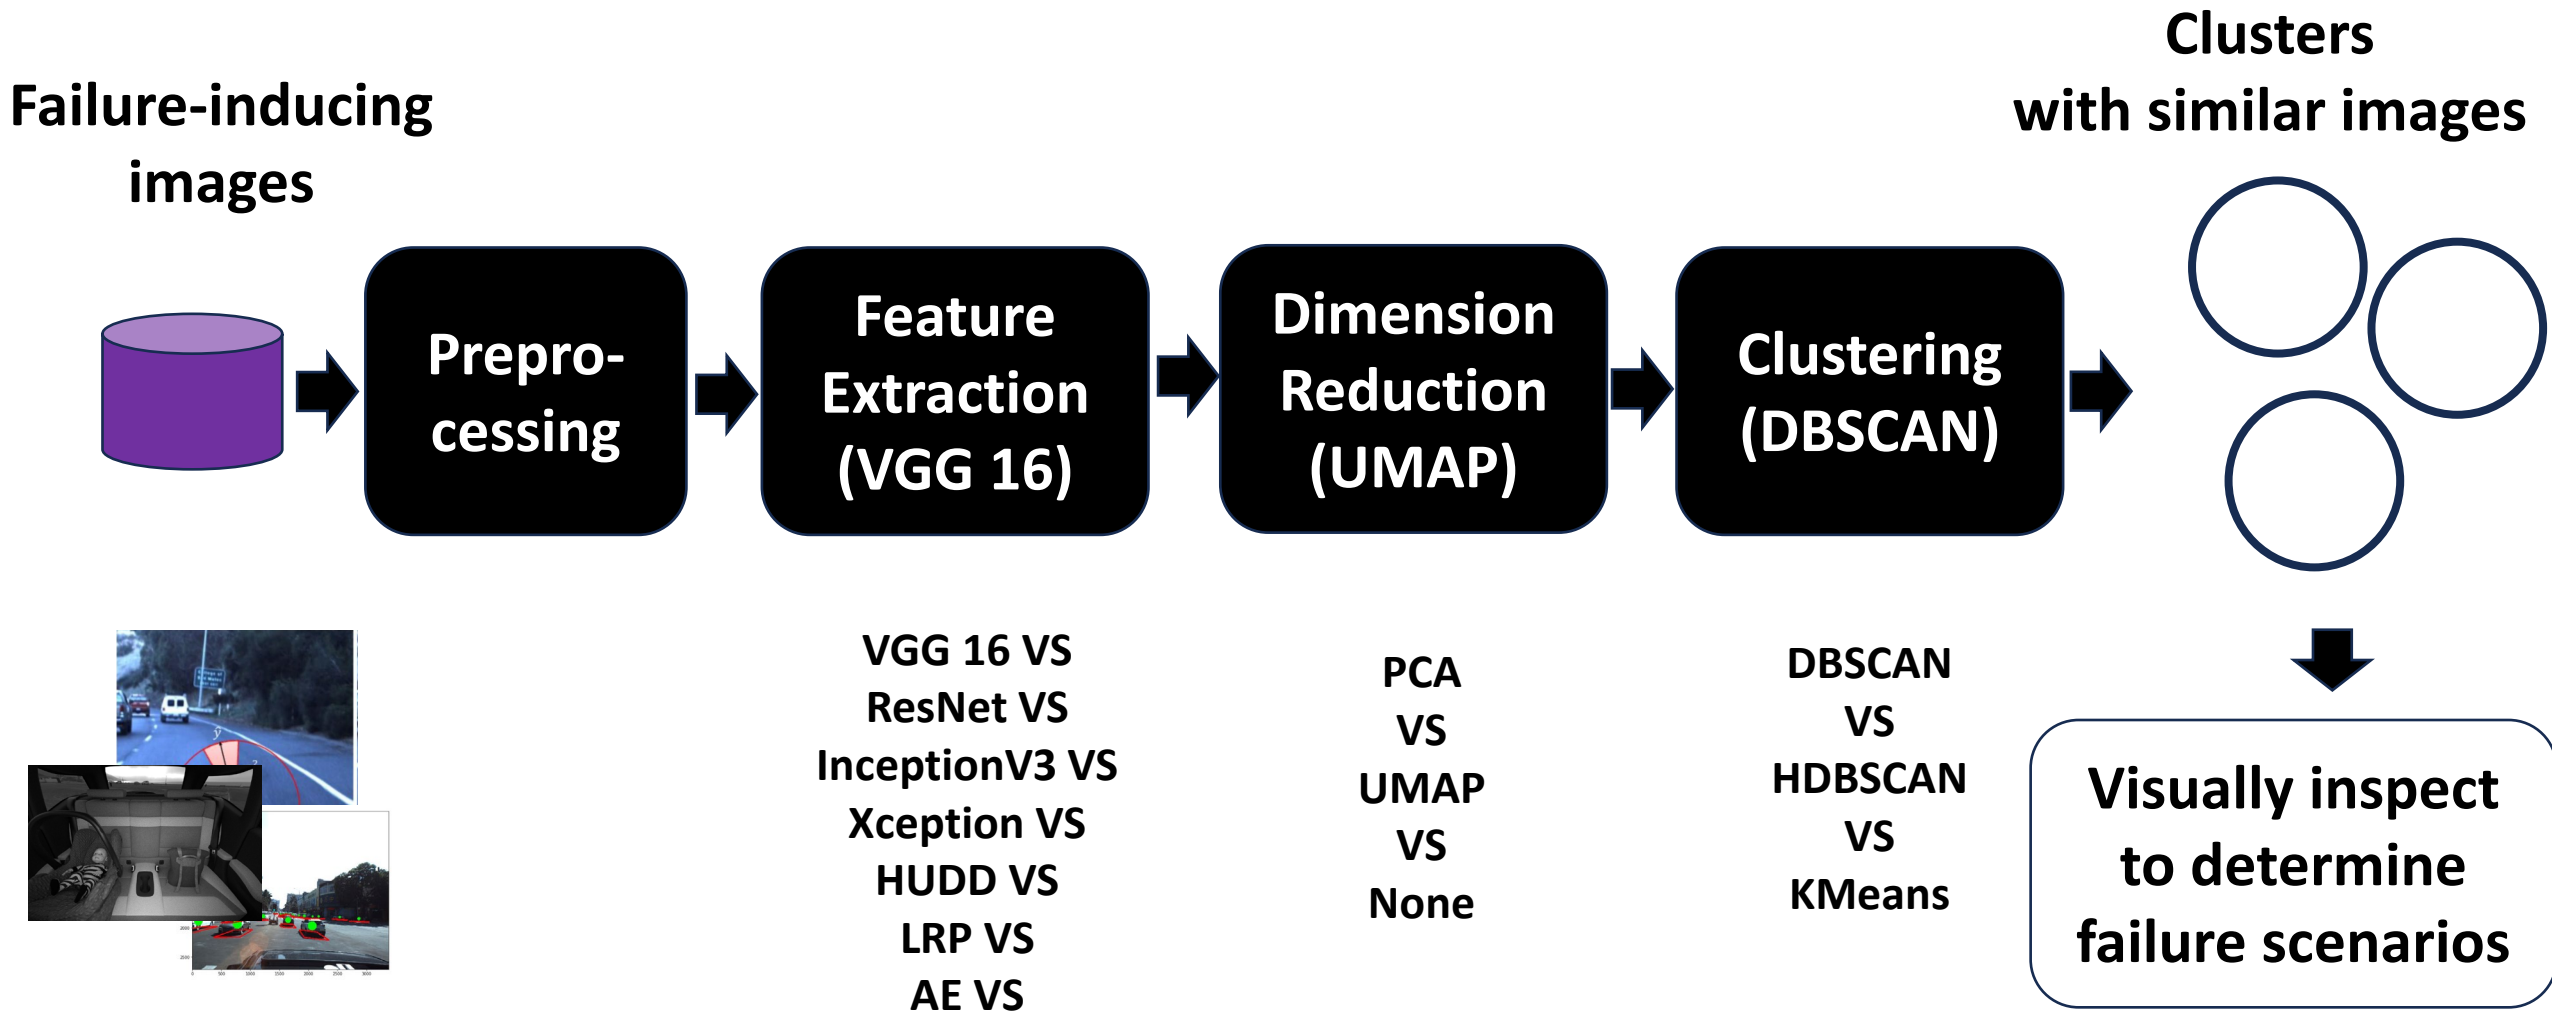

**Solar Ejection
Detection DNN**

To group like a human use a DNN

Failure analysis pipeline

Solar ejection preprocessing

Failure-inducing
images

Normalize: divide by the
most common pixel

Input 1

Input 2

Results with solar ejection

Images leading
to wrong
classifications

Interpretation: too much noise

Interpretation: no ejection

Images leading
to correct
classifications

Class: no ejection

Class: no ejection

Class: ejection
