

Thales Alenia Space view on getting a standard OBC and RTU specification

Gianluca Aranci, Livia Esposti

Starting from recent experiences, the presentation will give the Thales Alenia Space position on the objective to define a set of common requirements for OBCs and RTUs.

The way how these could influence the equipment and systems development processes and the level of requirements to be considered in such definition will be discussed.

The presentation will address the topics from two different perspectives: the large system integrator view, and the equipment supplier view.
