

# Mission Operation Services

Food For Thought

- Horizon of the vision: 5y; 10y; 15y; 50y;
- Motivation for having a global space segment + ground segment approach?
  - Overall cost reduction, who is concerned with the cost balance flight/ground?
  - Industrial return?
- Roadmap for step-by-step introduction?
  - SOA only on operator front-end; only on ground segment; up to s/c reception; up to the actual application component
  - Role of PUS-C
  - Industrial roadmap?
- Towards common architectural tools between flight and ground including deployment? Huge investment, are we prepared for that?
