

21st SPINE meeting

Monday, 18 May 2015 - Tuesday, 19 May 2015

ESA HQ/Mario-Nikis

Scientific Programme

In this meeting we expect to especially address the following topics:

Electrostatic cleanliness, charging and deep dielectric charging of satellites

Plasma instruments

Electric propulsion environment and Solar Arrays contamination

Material electrical properties (measurements, databases, new materials, etc ..)

Modelling/Experiments on dusts grains in space and laboratory plasmas

SPIS performance and current and future developments

However, this list is far from exhaustive and any other topics related to spacecraft-plasma interactions are potentially relevant.
